The industrial user shall comply with the monitoring requirements listed below:

1. Semi-annual monitoring for analyses listed in ADDENDUM II performed on a 24-hour composite sample. Ph should be measured at the time of sampling.

2. Samples shall be taken from the east and west manholes opposite the main entrance, approximately100 feet north of Moreno Street.

3. If results of the permittee's monitoring indicate that any permit limits have been exceeded, the permittee must:

   a. Notify the ECUA within 24 hours of becoming aware of the excursion, and

   b. **Repeat the sampling and pollutant analysis** and submit, in writing, the results within 30 days of the first excursion.

Reporting Requirements

The industrial user shall comply with reporting requirements specified below:

1. Semi-annual self-monitoring reports are due by July 15 for the first six months of the year and January 15 the following year for the second six month period of the year.

2. **Copies of all laboratory reports must be included with the self-monitoring reports.** If permittee monitors any pollutant more frequently than required by this permit, using test procedures approved under 40 CFR Part 136 or approved alternatives, the results of all such monitoring must be included in the monthly self-monitoring report.
3. The monitoring reports **must be signed** by a responsible corporate officer or a duly authorized representative. Authorization must be submitted in writing to the Water Reclamation Director and must specify an individual or position having

responsibility for the overall operation of the facility or for environmental matters for the company.

Recordkeeping Requirements

The permittee shall retain records of all monitoring information, including all calibration and maintenance records, and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least three years from the date of the sample, measurement, report or application.

Notification of Changed Discharge

The permittee shall promptly notify the ECUA in advance of any substantial change in the volume or character of pollutants in the wastewater discharge.

Notification of Violation

Whenever the Water Reclamation Director finds that any user has violated, or is violating any condition of this permit, or any prohibition, limitation, or requirement contained herein, the Water Reclamation Director shall serve upon such person, a written notice stating the nature of the violation. Within 15 days of the date of the notice a response indicating the reason for the violation shall be submitted to the ECUA,; and, within 30 days, a plan for the satisfactory correction thereof shall be submitted to the ECUA by the user.

Falsifying Information

Any person or user who knowingly makes any false statements, representation, or certification in any application, record, report, plan or other document filed or required to be maintained pursuant to this industrial discharge permit, or who falsifies, tampers with or knowingly renders inaccurate any monitoring device or method required under this permit, shall upon conviction, be punished by a fine of not less than $1,000.00 or by imprisonment of not more than 6 months or by both.

Civil and Criminal Penalties

Any person or user who is found to have violated any order of the ECUA, or who has willfully or negligently failed to comply with any condition of this permit, shall be fined not less than $1,000.00 for each offense. Each day on which a violation shall occur or continue, shall be deemed a separate and distinct offense. In addition to the penalties provided herein, the ECUA may recover reasonable attorney's fees, court reporter's fees and other expenses of litigation by appropriate suit at law against the person found to have violated this permit.
If any person discharges sewage, industrial wastes, or other wastes into the ECUA's wastewater disposal system contrary to the provisions of Chapter 26 of the ECUA Code, national categorical

pretreatment requirements, or any order of the ECUA, the ECUA's attorney may commence any action or appropriate legal and/or equitable relief, or the state attorney may be requested to initiate appropriate criminal proceedings.

Recovery of Costs Incurred

In addition to civil and criminal liability, the permittee violating any of the provisions of this permit or Chapter 26 of the ECUA Code, or causing damage to or otherwise inhibiting the ECUA wastewater disposal system, shall be liable to the ECUA for any expense, loss, or damage caused by such violation or discharge. The ECUA shall bill the permittee for the costs incurred by the ECUA for any cleaning, repair, or replacement work caused by the violation or discharge. Refusal to pay the assessed costs shall constitute a separate violation of Chapter 26 of the ECUA Code.

Right of Entry

Authorized representatives of the ECUA shall be allowed to:

- Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;
- Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;
- Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit.
- Sample or monitor, for the purpose of assuring permit compliance, any substances or parameters at any location; and
- Inspect any production, manufacturing, fabrication, or storage area where pollutants regulated under the permit could originate, be stored, or be discharged to the sewer system.

Non-transferability

Industrial discharge permits are issued to a specific user for a specific operation. An industrial discharge permit shall not be reassigned, transferred, sold to a new owner, new user, different premises, or a new or changed operation without the approval of the Water Reclamation Director. In the event of an approved transfer, any succeeding owner, user or operator shall be provided a copy of this permit and shall comply with all terms and conditions of existing permit so transferred.

ADDENDUM II

The industrial user shall comply with the following limitations (Local Limits) which are referenced in Chapter 26 of the Emerald Coast Utilities Authority Code:

1. Specified pollutant limitations. No person shall discharge wastewater containing in excess of:

3.075	**mg/l**	**Zinc**
0.059	**mg/l**	**Cadmium**
2.514	**mg/l**	**Copper**
0.468	**mg/l**	**Lead**
0.0046	**mg/l**	**Mercury**
2.052	**mg/l**	**Nickel**
0.011	**mg/l**	**Silver**

The limits listed above are instantaneous maximum allowable discharge limits and apply at the point of connection to the ECUA collection system. Those limits may be superseded by more stringent limitations contained in an industrial discharge permit issued in accordance with subsection 26-3 B of ECUA code.

2. Any wastewater not having a **pH between 5.5 and 12.0**, or wastewater having any other corrosive property capable of causing damage or hazard to structures, equipment and/or personnel of the ECUA.

ADDENDUM III

The industrial user shall comply with the following regulations that are included in Chapter 26, section 26-2 of the Emerald Coast Utilities Authority Code:

1. **General discharge prohibitions:**

No user shall contribute or cause to be contributed, directly or indirectly, any pollutant or wastewater which will interfere with the operation or performance of the ECUA's wastewater treatment plants. A user may not contribute the following to the ECUA's sewer system:

A. Any liquids, solids or gases, which by reason of their nature or quantity may be sufficient, either alone, or by interaction with other substances to cause fire or explosion, or be injurious in any way to the sewer system or the operation of the ECUA's wastewater treatment plants. At no time shall 2 successive readings on any explosion hazard meter at the point of discharge into the system (or at any point in the system) be more than 5%, nor any single reading over 10% of the lower explosive limit (LEL) of the meter.

Prohibited materials include, but are not limited to:

- Gasoline
- Kerosene
- Naphtha
- Benzene
- Toluene
- Xylene
- Ethers
- Alcohols
- Ketones
- Aldehydes
- Peroxides
- Chlorates
- Perchlorates
- Bromates
- Carbides
- Hydrides
- Sulfides
- Any other substances which the ECUA, the State or EPA has notified the user is a fire hazard or a hazard to the system.

B. Any wastewater having a temperature which will inhibit biological activity in the ECUA's wastewater treatment plants resulting in interference, but in no case wastewater with a temperature at the introduction into the ECUA's sewer system which exceeds 150°F or 65°C.

C. Any wastewater containing toxic pollutants in sufficient quantity, either singly or by interaction with other pollutants to injure or interfere with any wastewater treatment process, constitute a hazard to humans or animals, create a toxic effluent in the receiving waters of the ECUA's wastewater treatment plants or to exceed the limitations set forth in a categorical pretreatment standard. A toxic pollutant shall include, but not be limited to, any pollutant identified pursuant to section 307(a) of the Clean Water Act. (This section currently identifies 126 priority pollutants.)

2. **Accidental Discharge Report:**

The permittee must notify the Water Reclamation Director immediately upon the occurrence of spills, including accidental discharges, a non customary batch discharge, slug loads or slug discharges or any changes at its facility affecting the potential for a slug discharge that might cause problems for the POTW by entering the public sewer. During normal business hours the ECUA should be notified by telephone at 969-3344 or 969-6689. At all other times the ECUA should be notified by telephone at 969-6698. The notification must include location of discharge; date and time; type of waste, including concentration and volume; and corrective actions taken.

A. Within 5 days following an accidental discharge, the permittee shall submit to the ECUA a detailed written report. The report must specify the following:

1. Description and cause of the upset, slug load, or accidental discharge; the cause thereof, location of discharge and type, concentration, and volume of waste.

2. Duration of non-compliance, including exact dates and times of non-compliance and the time by which the compliance is reasonably expected to occur.

3. All steps to be taken to reduce, eliminate, and/or prevent recurrence of such an upset, slug load, accidental discharge, or other conditions of non-compliance.

3. **General Upset Provisions:**

A. Industrial user responsibility in case of an upset: The industrial user shall control production or all discharges to the extent necessary to maintain compliance with pretreatment standards upon reduction, loss, or failure of its treatment facility until the facility is restored or an alternative method of treatment is provided. This requirement applies in the situation where, among other things, the primary source of power of the treatment facility is reduced, lost or fails.

B. Notify ECUA within 24 hours of becoming aware of the upset, with a written submission to be provided within 5 days.

4. **General Bypass Provisions:**

A. Bypass not violating applicable pretreatment standards or requirements: An industrial user may allow any bypass to occur which does not cause pretreatment standards or requirements to be violated, but only if it is for essential maintenance to assure efficient operation.

B. Bypass that exceeds applicable pretreatment standards: An industrial user shall submit oral notice of an unanticipated bypass within 24 hours from the time the industrial user becomes aware of the bypass. A written submission shall also be provided within 5 days of the time the industrial user becomes aware of the bypass. The written submission shall contain a description of the bypass and its cause, the duration of the bypass, including exact dates and times; and, if the bypass has not been corrected, the anticipated time it is expected to continue, and steps taken or planned to reduce, eliminate, and prevent re-occurrence of the bypass.

C. If an industrial user knows in advance of the need for a bypass, it shall submit a notice to the control authority at least ten days before the date of the bypass. If the industrial user does not know of the need for a bypass ten days prior to the bypass then the industrial user shall notify the control authority immediately upon knowledge of the need for the bypass.

PROFESSIONAL CERTIFICATION PAGE

I hereby certify that in my professional judgment, the components of this Remedial Action Plan, prepared for Baptist Hospital, located at 1017 West Avery Street, Pensacola, Escambia County, Florida (FDEP Facility ID #178626031; satisfy the requirements set forth in Chapter 62-770 of the Florida Administrative Code (FAC). It provides reasonable assurances of achieving the objectives stated in Chapter 62-770, FAC, for remedial action. The engineering design features incorporated in this plan have been developed under my direct supervision and reviewed in total by me.

1.0 SCOPE

Enviro-Pro-Tech, Inc. (EPT), has developed the following Remedial Action Plan (RAP) to address the documented hydrocarbon impacted soil and groundwater at the Baptist Hospital Site, 1017 West Avery Street, Pensacola, Escambia County, Florida (FDEP Facility ID #178626031). The objectives of the RAPM are to provide a method and design for a mitigation system that will rehabilitate the site to No Further Action with Conditions status as outlined in Chapter 62-770, Florida Administrative Code (FAC).

2.0 SITE DESCRIPTION AND HISTORY

2.1 Site Description

The Baptist Hospital "site" (former underground storage tank [UST] location/Energy Center) is between E and H Streets in Pensacola, Escambia County, Florida. Specifically, the site is located at latitude 30 deg 25 min 49.45 sec North/ longitude 87 deg 13 min 54.18 sec west, and is referenced by the State of Florida as facility ID#17/8626031. The area surrounding the site consists of an unoccupied fuel pump building adjacent to a recently constructed 20,000 gallon above ground storage tank (AST) placed on a concrete slab. Other buildings near the site are a purchasing warehouse located west of the site and the energy center located south of the site. Figures and Tables referenced in this report are provided in **Appendix A** and **Appendix B** respectively. **Figure 1**, Site Map, illustrates the former UST location with respect to nearby structures.

2.2 Site History and Previous Work

The previous petroleum storage system consisted of two (2) 10,000-gallon, single-wall, fiberglass UST's. According to the FDEP Bureau of Petroleum Storage Systems data base, the tanks were installed in July 1976. The storage tank systems were previously used to fuel multiple standby electrical generators and a fire pump. Off-road (dyed) diesel fuel stored in the UST's was conveyed through aboveground steel piping to the adjoining cement block pump house before being transferred aboveground to the standby generator(s) and fire pump. The fuel return lines to the tanks were also placed aboveground. The UST's were outfitted with spill containment vessels and return and supply line piping sumps. The tanks were buried end-to-end in a north-south direction and were surrounded by a 2 to 3-foot thick layer of pea gravel. The tanks were located between and in close proximity to a cement block building and pad-mounted electrical transformers vital to the electrical supply to the hospital.

Petroleum staining observed on the northern UST's fill tube and the return containment sump during the closure/closure assessment prompted development of a Discharge Report Form (DRF). On October 19, 2009 the DRF was provided to the FDEP with an estimated number of gallons reported between 25 and 100 gallons. The affected media was listed as soil and groundwater with a regulated

substance recorded as diesel fuel. The source of the discharge was the UST with the cause of the release as unknown. Action taken in response to the discharge was source removal activities.

On October 15, 2009, EPT, commenced closure assessment activities at the Baptist Hospital, Inc., petroleum storage tank facility (Energy Center). The closure assessment was performed in accordance with the April 1998 edition of the document entitled "Storage Tank Closure Assessment Requirements", as prepared by the Florida Department of Environmental Protection (FDEP). Section 62-761.800(4), Florida Administrative Code (F.A.C.), requires that closure assessments be performed at the time of closure, replacement, installation of secondary containment, or changes from a regulated substance to a non-regulated substance to determine if a discharge has occurred from the petroleum storage tank system or system component. Tanks, pipes, or other system components in contact with the soil at any site are subject to the closure assessment requirements. System components, as stated in Section 62-761.200 (79), F.A.C., include dispensing systems, spill containment devices, and overfill protection devices. The closure assessment sampling and analyses are required to be conducted in accordance with the FDEP's printed "Storage Tank System Closure Assessment Requirements" per Section 62-761.800 (4) (c), F.A.C.

Due to the proximity of the tanks to the pump house building and other structures, the tanks were closed in-place by removing ends on the top section of the tank and filling the void with a white fine to medium grained dry clean sand. Soil/pea gravel headspace vapor concentrations measured at the tank's fill port located near the middle of the tank ranged from 2,750 parts per million (ppm) to 4,601 ppm from near land surface to the top of the tank. A reading of 50 ppm is considered excessive for soil contacted by diesel fuel. Stained and excessively contaminated soil/pea gravel was also found next to the fuel return sump at the tank's south end. Soil/pea gravel exhibiting petroleum-like odor and/or excessive vapor concentrations were segregated from the other excavated soil and placed on plastic sheeting for later transport offsite during the UST closure. A soil screening summary from soil borings and stockpiled soils performed during the UST closure are provided in **Table 1**.

The pea gravel backfill was found to be saturated with red dyed diesel fuel and water at approximately 6 to 7-feet below land surface. Product saturated gravel was present on both the east and west sides of the UST. Soil borings placed 5 to 10-feet away from the tank pit revealed that a perching unit of dry, iron-rich, silty-sand existed at approximately 7-feet bls. The brown and tan silty sandy soil just above the unit was saturated with water. The headspace vapor concentrations measured in the saturated soil resting on the perching unit north and east of the UST were less than 1 ppm, and, similar soil collected a short distance west of the tank exhibited corrected vapor levels of 2,910 ppm and 3,436 ppm and emitted weathered diesel-like odors. A 6-inch layer of dyed diesel product was present in a shallow compliance well located outside the southwest corner of the tank pit. Product was not observed in a sample of the saturated soil collected adjacent to the well. Further tank removal work was terminated until provisions were made for the removal and disposal of the water and product within the tank pit.

On October 19th, a sample of the obviously contaminated soil was collected to confirm whether the material was a hazardous or special waste (for disposal purposes), and, to determine if the soil contained contaminants of concern above State standards. The soil was found to be a special waste and was subsequently accepted for disposal in Escambia County's Perdido Landfill. The same soil was also found to contain one or more volatile and semi-volatile organic compounds and total recoverable petroleum hydrocarbons in concentrations that exceeded the State's cleanup target levels, as reported in Chapter 62-777, Florida Administrative Code. That same day, four (4) 2-inch diameter well points were driven to the bottom of the pea gravel backfill on the east and west sides of the North Tank. A vacuum truck operated by Aaron Oil Company, Mobile, Alabama was commissioned to evacuate water and product from the tank pit through the well points. Approximately 1,724-gallons of liquid were removed, dropping the liquid level in the tank pit between 9 and 10-feet bls.

Excavation activities resumed the next day. Soil samples from the sidewalls of the tank pit at 8 to 10-feet bls exhibited a strong diesel-like odor and produced an iridescent sheen when placed in water. The northern half of the North tank was severed from the mostly unearthed southern half and removed for offsite disposal. Water and product subsequently filled the bottom foot of open tank

remaining in the ground. A vacuum truck belonging to SWS First Response was commissioned to evacuate the liquid accumulating in the tank. The tank's bottom and sidewalls were perforated with 0.5-inch holes 6-inches to a foot above the bottom of the tank to allow product and water to move efficiently into the tank. Approximately 1,800-gallons of liquid were removed that night and an additional 185-gallons the following morning of liquid were pumped from the UST into a skid tank before the tank filling activities began. It was decided that further excavation activities would jeopardize the structural integrity of near-by structures vital to the hospital's operations and that the Subject USTs would be filled in-place and not removed. The remaining portion of the North Tank and the entire South Tank were filled with white, well sorted medium sand to 1-foot above the tops of the tanks to facilitate future remediation efforts. A layer of black polyethylene sheeting was placed between the white sand and the overlying brown loamy sand backfill material. The backfilled and compacted areas of disturbed ground overlying and in the vicinity of the tanks were covered with sod mats. Approximately 91-tons of excavated soil and pea gravel were transported offsite for disposal in the County's lined Class I sanitary landfill.

2.3 Recent Site Assessment Activities

Comprehensive site assessment activities have been documented in the Site Assessment Report, dated March 2010. The SAR received final regulatory approval December 16, 2010 and authorized preparation of this RAP.

Following submittal of the SAR, a permit was obtained from the ECUA to discharge tank pit water intermittently into the sanitary sewer system. The tank pit was de-watered through two (2) 4-inch diameter recovery wells installed in the tank pit and treated through an oil-water separator before being discharged to a sewer clean-out associated with a near-by building. At least one (1) month after each pump and dispose event, the recovery wells were purged and sampled for BETX+MTBE, PAHs, and Fl-Pro. Eight (8) pump and dispose events have occurred since April 2010. Approximately 44,815-gallons of treated water were disposed into the ECUA's sanitary sewer system. Additional free-product was not recovered during the tank pit de-watering process. The contaminant concentrations measured at Recovery Well (RW) 1, placed in the sand and gravel

backfill at the north end of the tank pit have steadily decreased following each pump and dispose event. The contaminant concentrations at RW-2, screened within and below the southern UST, steadily decreased after each pumping event until February 2011, when the total xylenes and ethyl benzene concentrations rebounded to levels that exceed their initial concentrations measured in May 2010. In June 2011, after the seventh (7th) pump and dispose event, while sampling the four (4) surficial aquifer wells (DWR) approximately 1-foot of dyed diesel product was discovered in DWR-3 located at the south end of the tank pit. A water sample for laboratory analysis was not collected from DWR-3, but, the water samples from the other three (3) wells were found to be clean. Approximately 0.01-foot (heavy sheen) of diesel product was also found in shallow well MW-1, also located at the south end of the tank pit. Free-product recovery commenced soon afterwards with bailing and then sorption in both DWR-3 and MW-1. Free-product recovery ended on November 14, 2011 when product was no longer observed in either well. Less than 0.5-gallon of product is estimated to have been recovered.

In August and November, 2011, eight (8) additional shallow wells, MW-5 through MW-13, were installed less than 0.5-feet into the perching layer. An additional deep well, DW-5, was installed hydraulically down gradient from DWR-3. The newly installed wells, MW-5 through MW-10, were repeatedly checked for free-product with none being observed. Well MW-5 was placed less than 2-feet away from DWR-3. A deep boring was also drilled adjacent to DWR-3 and completed to 45-feet bls. Significant evidence of contamination was not encountered below the bottom of the silty-clayey perching unit at 15-feet bls and the water table at 38-feet bls. Following the installation of wells MW-11 through MW-13 in November, all of the shallow wells, including MW-1, were found to be dry due to lack of rainfall.

2.3.1 Soil Quality Assessment

On October 15, 2009, EPT commenced a soil investigation associated with UST closure assessment activity. The supplemental soil assessment activities (post UST removal) was to confirm petroleum impact to the environment and to determine the continuity of the perching unit at least to the lateral extent of the obviously contaminated saturated soil resting on the unit, as determined during the UST

closure. Post UST closure soil borings were conducted on October 21, 2009 and continued intermittently through November 4, 2009. A total of 25 soil borings were advanced during the mentioned time period. **Table 1** provides soil screening summary and for the borings completed during the investigation (UST closure and post closure assessment).

A comparison of the headspace vapor concentration to the laboratory results for the volatile organic contaminants (VOCs) in the soil suggests that a headspace reading of less than 280 ppm is indicative of "clean" soil with respect to the VOCs (see B-17 and B-19 **Table 2 [Soil Quality Summary Table]).** Total Xylenes appears to be the predominant contaminant of concern in all of the samples exhibiting contaminant levels above the State's CTLs. The SPLP BTEX+MTBE results on two (2) silty-clayey sand samples exhibiting low and medium total xylenes concentrations suggest that such soil would not present a potential groundwater threat until the total xylenes concentration in the samples exceeded 1.5 to 1.7 mg/kg. Based on the soil headspace and total xylenes concentrations in three (3) silty-clayey sands and one (1) fine to medium sand, a headspace vapor reading of 280 ppm would be indicative of a VOC concentration that might exceed the State's default leachability limits for groundwater protection. The SPLP analytical summary is located on **Table 3.**

The data suggests that a threshold reading of less than 10 ppm is indicative of "clean" soil for those compounds with respect to the semi-volatile organic contaminants of concern (PAHs). The corrected headspace vapor concentrations measured during the investigation ranged from less than 1 ppm to just above 5,000 ppm in the soil samples collected at the top of the shallow perching layer. Below the perching layer, the corrected headspace vapor concentrations ranged from less than 1 ppm to 1,330 ppm. All of these readings were collected outside the tank pit. The highest reading above the perching unit was obtained at borehole B-10, located at the south end of the tank pit near the Energy Center building. The area of contaminated soil in the shallow zone extends under this building. The shallow zone soil contamination extends under the eastern 5-feet of the paved parking lot located west of the tank pit, and probably under the cement block fuel pumping building at the eastern edge of tank pit. The highest reading below the perching unit was encountered at borehole B-17 at the western edge of the north end of the tank pit. The perching unit over most of the site appears to be

approximately 8-feet thick extending to approximately 15-feet bls. The perching layer is 2-feet or less in thickness within the tank pit. It is thought that the rain or groundwater that had accumulated within the tank pit prior to the fuel release acted as a hydraulic barrier to vertical fuel migration in addition to the concrete slab placed below the tanks. The vapor concentrations measured in the soil below the perching unit are the result of relatively low levels of water-soluble fuel constituents migrating vertically with groundwater flow through the unit. The attached **Figures 2** and **3** illustrate the headspace vapor concentrations for the soil collected from 0 to 8-feet bls and 8 to 50-feet bls, respectively. **Figure 4** illustrates the soil laboratory analytical results. **Figure 5** shows the TRPH concentrations for samples taken from surface to 8 feet bls. **Figure 6** shows the TRPH concentrations for samples taken below 8 feet bls. An additional twelve (12) soil borings were advanced in August and November 2011. The borings were advanced to depths ranging from 4-feet to 45-feet bls. OVA headspace readings were collected; however, laboratory samples were not submitted for analysis. **Table 1** provides soil screening summary for this and previous investigations

2.3.2 Groundwater Quality

On April 10 & 11, 2012, EPT mobilized to the Subject property to collect groundwater samples from monitor wells MW-2, MW-4, MW-4, MW-5, MW-6, MW-7, MW-8, MW-11, MW-12, MW-13, DW-1R, DW-2R, DW-3R, DW-4R, DW-5 and recovery wells RW-1 and RW-2. Prior to sampling, the well caps were removed and the wells were allowed to equilibrate and a round of depth-to-water measurements was collected. Monitor wells MW-4, MW-12 and MW-13 did not contain water and were not sampled. Deep well DW-3R was not sampled due to 0.03-feet of free-phase hydrocarbons measured in the well. Groundwater samples were collected from the wells according to FDEP protocols, packed in ice, and delivered to Environmental Testing Laboratories (ETL), Thomasville, Georgia. Due to low liquid levels and slow to no recharge conditions, parameters were not collected from monitor wells MW-2, MW-3, MW-5, MW-6, MW-7 and MW-8 prior to sampling. All groundwater samples were analyzed for BTEX + MTBE. Additionally, the samples from MW-2, MW-3, MW-5, MW-6, MW-7, MW-11, DW-1R, DW-2R, DW-4R, DW-5, RW-1 and RW-2 were analyzed for PAHs and the samples from MW-2, MW-11, DW-1R, DW-2R, DW-4R, DW-5, RW-1 and RW-2 were analyzed for TRPH.

The analytical results displayed exceedences of state Groundwater Cleanup Target Levels (GCTLs) for several petroleum products contaminants of concern in monitor wells MW-5, MW-7 and MW-8. The highest concentrations of contaminants were observed in MW-5, (benzene 14-ug/L, ethylbenzene 120-ug/L, total xylenes 450-ug/L, naphthalene 37- ug/L and 2-methylnaphthalene 29-ug/L). Monitor wells MW-7 and MW-8 also exhibited contaminant concentrations; however, below the State Natural Attenuation Default Concentrations (NADCs). The laboratory results are tabulated in **Table 4**, Groundwater Monitoring Well Analytical Summary, and illustrated on **Figure 7. Figure 8** shows the BTEX isocons for the perched groundwater unit at the site.

EPT returned to the site on June 19, 2012 to over purge monitor well DW-3R to remove the free-phase hydrocarbons detected during the April 2012 sampling event. The well was purged for approximately 8.9-hours at 0.5-gallons per minute. Approximately 254-gallons of groundwater was removed and discharged into a sanitary sewer.

On July 26, 2012, one week after the over purging activities were conducted on DW-3R, EPT personnel collected groundwater samples from DW-3R after determining free-phase hydrocarbons were not present in the well. The samples were analyzed for BTEX+MTBE, PAHs and TRPH.

Laboratory results detected contaminants of concern; however, the contaminant concentrations were below the FDEP GCTLs. The laboratory results are tabulated in **Table 4**, Groundwater Monitoring Well Analytical Summary.

2.3.3 Occurrence and Movement of Groundwater

Depths to water levels were collected to the nearest 0.01-foot on April 10, 2012 from the perched and surficial water tables. Groundwater and top-of-casing elevations are referenced to an arbitrary elevation of 100-feet above National Geodetic Vertical Datum (NGVD). The apparent groundwater flow trends in a southerly direction with a calculated hydraulic gradient of 0.011 ft/ft. **Table 5,** Groundwater Elevation Table, reports the top of casing elevations, the total depths, the screened-intervals and the water level elevations. **Figures 9 & 10** illustrate the groundwater elevations and

inferred flow as measured on April 10, 2012 for the perched and surficial water tables, respectively.

2.4 Site Lithology

The lithology at the site consists of predominantly a brown fine-grained, well sorted silty sand was from the surface to approximately 7-feet bls. From 7 to 9-feet bls a gray, brown and orange, fine grained clayey sand was described. At 9 to 10-feet bls a gray and orange clayey sand with thin iron rock deposits was described. From 10 to 15 feet bls a orange and tan stiff sandy clay was described becoming a white and pink fine to medium grained was noticed from 15 to 17.5 feet-bls. From 17.5 to 20-feet bls a white and pink fine to medium grained sand with a 1-inch silty clay seem was noticed at 17-feet. Between 20 and 40-feet bls a white, pink and orange medium grained sand was noted and between 40 and 45-feet bls, an orange fine to medium grained sand with some silt followed by a white fine grained sand was described. From 45 to 50-feet bls a pink fine to medium grained sand was observed to the vertical extent of the boring. Literature values for the hydraulic conductivity of silty sands range from 1 ft/day to 10 ft/day.

3.0 CONTAMINATION MASS ESTIMATES

Estimates were made for total hydrocarbon levels (or TRPH) in the vadose and saturated zones based on the net OVA screening results shown in **Table 2** and illustrated on **Figures 2 and 3**. **Figure 2** shows an area of 2448 sq ft within the zone from 0 to 8 feet bls. Using this area and the high OVA reading within it is estimated that approximately 299 pounds of petroleum contamination is present within it as vapors and attached to the soil. **Figure 3** shows an area of 2224 sq ft within the zone from 8 to 24 feet bls. Using this area and the high OVA reading within it is estimated that approximately 651 pounds of petroleum contamination is present within it as vapors and attached to the soil.

The groundwater contamination mass was based on the BTEX concentrations in the groundwater. The areal extent of the BTEX contamination in the groundwater is shown on **Figure 8,** BTEX Contour Map, with the respective iso-contours. The figure shows a contaminated area of approximately 1950 ft^2. The groundwater contamination was assumed to be limited to the perched water table. Although its thickness is highly variable it is assumed for this estimate to be an average of 2-feet. The amount of petroleum contamination in the groundwater and adsorbed to the saturated soil is slightly more than 1 pound using these values. A spread sheet with the mass contaminate estimate is included in **Appendix C**.

4.0 REMEDIAL DESIGN SUMMARY

4.1 Technology Screening

The following options were considered.

Pump and Dispose

The pump-and-treat process, whereby contaminated ground water is pumped to the surface for treatment, is one of the most common ground-water remediation technologies used at hazardous waste sites. However, recent research has identified complex chemical and physical interactions between contaminants and the subsurface media that may impose limitations on the extraction part of the process. This technology is one of the least expensive technologies to implement however because of its limitations it can sometimes be a slow process. It can take many volumes of groundwater to reach the clean up target levels. This process will not address soil that is not within the saturated zones. This process is being retained for consideration and comparison on a cost basis.

Vacuum Extraction with Air Sparging

Air sparging is the process of injecting air into the aquifer. The injected air acts to volatilize contamination in the groundwater, transporting it to the vadose zone where it is recovered by the soil vapor extraction system. It also provides agitation of the saturated soil with the air bubbles as they travel up through the water and, finally, the air supplies oxygen to the aquifer to help speed up natural biological processes. Because of the limited thickness of the perched aquifer and the semi volatile nature of the diesel fuel this option was screened from further consideration.

Soil vapor extraction (SVE) is the process of drawing air through the contaminated soil. The air that is drawn through the soil volatilizes the petroleum contamination and carries it out with the air. The petroleum contamination can then be recovered or destroyed aboveground. SVE can be operated in conjunction with air sparging and it will clean up any soil at the site that is acting as a source of groundwater contamination and recovers contaminants from the sparged air. While the air that is sparged into the groundwater will strip the petroleum and solvent contaminants from the groundwater, the SVE is required to capture any contaminated air from the sparge wells as well as to remove contamination in the vadose zone. SVE is screened from further consideration because of the lack of

cover of the soil to causing short circuiting, the silty nature of the soil, and the semi volatile nature of diesel fuel.

Soil Excavation

Another remedial option considered for the site was soil excavation and offsite disposal. The proximity of the soil to the electric transformers, parking lot, underground utilities, and building make the excavation impractical. Soil excavation has been screened from further consideration for these reasons.

Chemical Injection

This alternative is based on a process of injecting proprietary chemicals into both the vadose zone and saturated zone through permanent injection wells. These reagents include chemicals that cause oxidation reactions and those that act as catalyst to these reactions. The petroleum contamination that comes in contact with these chemicals are reduced to the harmless by products. This technology has been used at other sites in Florida successfully. Its success is dependent on the reagents coming in contact with the contaminants and the chemicals limited life is the subsurface. It has been EPTs experience that multiple injections are required to achieve cleanup goals increasing the cost of this technology. This technology will be retained for further consideration.

4.2 Technology Selection

The selection of technology was based on two factors: What would effectively clean the site and the most reasonable price. We selected Pump and Dispose because of the lower cost. See **Appendix D** for a more detail breakdown of cost. The cost of the chemical injection was based on a unit treatment cost of $125 per cubic yard and a second injection of 60% of the area based on the previously discussed experience with the requirement of multiple injections.

Cost Comparison

Technology	Cost for Technology
Pump and Dispose	$249,512.33
Chemical Injection	$372,400

4.3 Remedial Design

4.3.1 General Design

The groundwater and smear zone contamination will be treated by allowing the natural rainfall enter the contaminated area and recovering it through down gradient recovery wells. This should allow it to follow the path that the diesel fuel spill did penetrating the contaminated soil surrounding the tank pit and releasing the adsorbed diesel so that it can be recovered by the proposed down gradient recovery wells. Once recovered the groundwater will be disposed of through the sanitary sewer system under the current agreement with ECUA.

The hydrocarbons are exposed to further degradation process through natural processes of bacteria and enzymes that are present in the soil that use the petroleum as a food source. These processes are aided by the oxygen that is introduced into the subsurface by the water. These processes may be sped up or assisted by introducing additional water through existing recovery wells RW-1 and RW-2 or even by adding additional nutrients to allow the bacteria and enzyme to thrive.

4.3.2 Recovery Wells

Two (2) recovery wells are recommended to treat the current contamination. Each well should recover groundwater at a rate of 0.10 gpm. The area of coverage was based on the extent of contaminated perched groundwater illustrated in **Figure 8,** the area of BTEX groundwater contamination. The depth of contamination is highly variable but is assumed to be on top of the confining layer at 7-feet bls in the zone of perched water; therefore, the extraction wells should be set to a slightly deeper depth. The 4-inch PVC wells will be screened from 2-feet to 8-feet bls. Submersible pump will be placed in each well to provide the extraction. Each well will also be fitted

Page 1942 of 3084

with a hi-lo switch to turn the submersible pumps on and off with the fluctuations of the groundwater levels. **Figure 11** illustrates the location of the proposed extraction wells. **Figure 12** shows the construction details for the recovery wells.

4.3.3 System Equipment

The system uses a pre-constructed Skid mounted system including a control panel, recovery manifold, a surge tank, and a transfer pump. The surge tank will also function as an oil-water separator by feeding in from the top and emptying from the bottom. It is not anticipated that any product still remains however the surge tank will be checked for product each time before it is pumped to the sewer. The recovered ground water will pass through the surge tank before being pumped into the sanitary sewer. The surge tank will be equipped with a high level switch that will disable the submersible pumps until the water can be disposed. The water will be pumped to the sanitary sewer system owned by Emerald Coast Utility Authority by their permission. Please see the authorization letter in **Appendix D**. The tank will be pumped via hoses to the sanitary sewer from the surge tank during regularly scheduled O&M visits. **Figure 13**, Piping and Instrument Diagram illustrates the equipment used, controls, and monitoring instruments. The system will operate automatically 24-hours per day, 7-days per week. Proposed equipment cut sheets are included in **Appendix E**.

4.3.4 Permits and Licensing

The contractor shall obtain the necessary construction permits. The contractor shall maintain federal, state, and local qualifications necessary to perform work including contractors license and secure all work permits, as applicable. All workers shall have current OSHA Hazwoper certification, and shall follow all appropriate OSHA safety precautions (including using appropriate PPE). Recovery well permits shall be obtained by the drilling contractor and an electrical permit will be obtained by the electrical contractor when the temporary service is installed.

5.0 CLEANUP TIME

The implementation of the remedial action plan will follow the submission and approval of the construction drawings and remedial action cleanup (RAC) proposal. The well installation is expected to take one (1) day to complete. The construction, electrical wiring, and pump installation is expected to require ten (10) days to complete. The control panel and equipment skid will require 6 to 8 weeks to manufacture.

Literature suggests, (Torres, Orantes, and Ituribe, 2006) that an appropriate retardation factor for diesel fuel in a sandy clayey soil ranges from 2.6 to 2.9. Assuming the number of pore volumes required to remediate the site is equal to the retardation factor and using a safety factor of 3 for the worst case, an estimate of the clean up time ranges from 263 days to 2.4 years. This time is dependent on rainfall and extended periods of drought or of heavy rainfall could speed up or slow down the cleanup. There fore total cleanup time should range from 1 to 3 years. Once cleanup objectives are met a full year of groundwater monitoring will be completed.

6.0 CONSTRUCTION PLAN OF ACTION

The Construction Plan of Action covers the activities from the Construction Drawings to the startup report. It is expected that once the RAP has been approved a set of Construction Plans and Specifications will be produced and the project will be initiated. The RAP should be approved in no more than 3 months from submittal with any recommended changes incorporated. Remedial action should be initiated with the construction of the system which is estimated to take from 8 to 12 weeks. Well installation and construction can proceed simultaneously with the construction of the system. System hook-up and startup is estimated to take 2 to 3 weeks. This schedule has the system in full operation within 7 months.

The following permits will need to be obtained to complete construction:

Permit	**Party Responsible**	**Time Frame**
Well Drilling Permit	EPT	Prior to drilling
Electrical Permit	Electrical contractor	Prior to equipment being installed

7.0 STARTUP AND TESTING

The startup will begin after the final inspection of the construction activities and the equipment installation. EPT personnel shall be onsite for the startup test for the first three days and once during the second week of operation. The following will be performed before and during the start-up test:

- A baseline sampling event will be performed before starting the system. Monitor Wells MW-2, MW-5, MW-7, MW-8, MW-10, MW-11, and DW-4R will be sampled for BTEX + MTBE, PAH and TRPH.

After the baseline groundwater sampling the groundwater will be sampled quarterly. The quarterly water samples will consist of 5 monitor wells selected at the time of sampling to determine effectiveness of the operation. The wells will be analyzed for BTEX + MTBE and TRPH. An RA Start-up report will be submitted for review within 60 days of conducting the start-up test. The report will include as-built drawings signed and sealed by a Florida Registered Engineer.

The groundwater monitoring events will continue until concentrations remain below the State's GCTLs for one (1) year after the active remediation has been terminated. No further action at the site is recommended once GCTLs are maintained at the site for one (1) year. Because the proposed remedy does not address soil below 8 feet bls the site would require it to be a NFA with conditions and the conditions of the closure would be negotiated with FDEP. Quarterly reports will be provided with the recorded data from the monthly visits and the groundwater sampling events. Milestones will be included with graphical representation of the site's remediation progress. Annual reports will also be provided with a detailed evaluation of progress.

8.0 PROJECT COST

The estimated cost of the proposed remedial action plan is based on our prior experience with similar sites using the assessment data that has been collected and evaluated. The detailed cost estimate calculations are included in **Appendix F**. The presented cost is based on the predicted range of length of the project and is therefore a range of cost and not a fixed price.

	Cost for 1 year	Cost for 2.6 years
Baseline & Install	**$82,721.61**	**$82,721.61**
1 Year O&M	**$48,662.88**	**$48,662.88**
2 Year O&M	**-**	**$48,662.88**
3 Year O&M	**-**	**$49,982.88**
Year of Monitoring and Closure of the Site	**$20,802.08**	**$48,662.88**
Total Cost	**$152,186.57**	**$249,512.33**

9.0 CONCLUSIONS AND RECOMMENDATIONS

The components of this Remedial Action Plan Modification satisfy the requirements set forth in Chapter 62-770, FAC. It provides reasonable assurances of achieving the objectives stated in Chapter 62-770, FAC, for remedial action. When implemented, it is expected that the cleanup goals for groundwater can be achieved with the system as designed and that a No Further Action with Conditions can be obtained for the site. It is recommended that plans and specifications be prepared for the remedial action as described in this RAPMOD and a cost proposal for completing the remedial action construction be completed.

RE: GROUND WATER DISCHARGE PERMIT NO. GW 1062-15

Dear Mr. Swann,

The application for your permit to discharge contaminated water has been reviewed and processed in accordance with Chapter 26 of the Emerald Coast Utilities Authority Code.

The enclosed **Permit No. GW 1062-15** covers the discharge from the facility located at 1717 North "E" Street, Pensacola, Florida. into the ECUA sewer system. Subject site is located west of the main hospital building and south of West Avery Street in the area of the complex known as the Energy Center. All discharges from this facility and actions and reports relating thereto, shall be in accordance with the terms and conditions of this permit.

Please review the Monitoring and Reporting requirements in ADDENDUM I and the specified pollutant limitations shown in ADDENDUM II.

If you have any questions, please call Mr. Don Mitchell at 850- 969-3380, extension 4216.

Sincerely,

Donald C. Palmer, P.E.
Water Reclamation Director

GROUNDWATER DISCHARGE

PERMIT

PERMIT NO. GW 1062-15 Classification - MIU

5-Year Permit

In accordance with the terms and conditions of Chapter 26, Emerald Coast Utilities Authority (ECUA) Code and any applicable provisions of Federal, State, or ECUA law, code, or regulation, permission is hereby granted to **BAPTIST HEALTH CARE** for the discharge of contaminated groundwater into the Emerald Coast Utilities Authority's sanitary sewer system. This permit is granted in accordance with the application filed on **January 8, 2010,** by **Mr. W. Grady Swann III** and the plans, specifications, and other data submitted to the ECUA in support of said application, which are a part of this Permit and are incorporated herein by this reference, subject to the attached conditions and requirements of Addenda I through III, which are incorporated herein by this reference.

Effective: **January 18, 2010**

Expiration: **January 18, 2015**

By: _____

Donald C. Palmer, P.E.
Water Reclamation Director

ADDENDUM I

Permit Limits

The industrial user shall comply with the effluent limitations specified below:

1. All parameter limits listed in Chapter 26 of the Emerald Coast Utilities Authority Code. See Addenda II and III.

Monitoring Requirements

The permittee shall comply with the monitoring requirements listed below:

1. None, other than the testing mentioned by Enviro-Pro-Tech after the third event.
2. ECUA shall take monthly discharge water meter readings for surcharge billing.
3. If results of the permittee's monitoring indicate that any permit limits have been exceeded the permittee must:
   a. Notify the ECUA within 24 hours of becoming aware of the excursion.

Reporting Requirements

The permittee user shall comply with reporting requirements specified below:

1. Copies of the ground water testing reports by EPT (Enviro-Pro-Tech, Inc.) to ECUA.
2. **Copies of all laboratory reports must be included.** If permittee monitors any pollutant more frequently than required by this permit, using test procedures approved under 40 CFR Part 136 or approved alternatives, the results of all such monitoring must be forwarded to ECUA
3. If monitoring reports are required they must be signed by a responsible corporate officer or a duly authorized representative. Authorization must be submitted in writing and must specify an individual or position having responsibility for the overall operation of the facility or for the environmental matters for the company.

Treatment of Contaminated Groundwater

Any customer who discharges contaminated groundwater shall pay a surcharge of $1.50 per 1000 gallons. This surcharge shall be in addition to the minimum charge and volume charge for wastewater service. ECUA will accept for treatment groundwater containing only benzene, toluene, ethylbenzene, xylene or other pollutants, which ECUA determines to be treatable. The concentration of the contaminate must be such that a 1 to 100 dilution of the resultant mixture shows less than 50 percent mortality to *Ceriodaphnia* in a 48-hour toxicity test. ECUA may at any time, and at its sole discretion, require a customer to cease or reduce discharge to the ECUA system if ECUA determines that the discharge has an adverse effect on the ECUA wastewater treatment system

Flows Not in Excess of Fifty Gallons Per Minute

A capacity impact fee is not required for the discharge of less than fifty gallons per minute of contaminated groundwater drawn from a single source or plume of contamination. Since a capacity impact fee is not paid for the discharge of contaminated groundwater from any such source, capacity is not guaranteed, and ECUA may at any time and at its sole discretion require that discharge be reduced or terminated if ECUA determines that sufficient wastewater system capacity is not available to meet demands for service.

Recordkeeping Requirements

The permittee shall retain records of all monitoring information, including all calibration and maintenance records, and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least three years from the date of the sample, measurement, report or application.

Notification of Changed Discharge

The permittee shall promptly notify the ECUA in advance of any substantial change in the volume or character of pollutants in the wastewater discharge.

Notification of Violation

Whenever the Director of Water Reclamation finds that any user has violated, or is violating any condition of this permit, or any prohibition, limitation, or requirement contained herein, the Director shall serve upon such person, a written notice stating the nature of the violation. Within 15 days of the date of the notice, a response indicating the reason for the violation shall be submitted to the ECUA; and, within 30 days a plan, for the satisfactory correction thereof, shall be submitted to the ECUA by the user.

Falsifying Information

Any person or user who knowingly makes any false statements, representation, or certification in any application, record, report, plan or other document filed or required to be maintained pursuant to this groundwater discharge permit, or who falsifies, tampers with or knowingly renders inaccurate any monitoring device or method required under this permit shall, upon conviction, be punished by a fine of not more than $1,000.00 or by imprisonment of not more than 6 months or by both.

Civil and Criminal Penalties

Any person or user who is found to have violated any order of the ECUA, or who has willfully or negligently failed to comply with any condition of this permit, shall be fined not less than $100.00 nor more than $1,000.00 for each offense. Each day on which a violation shall occur or continue, shall be deemed a separate and distinct offense. In addition to the penalties provided herein, the ECUA may recover reasonable attorney's fees, court reporter's fees and other expenses of litigation by appropriate suit at law against the person found to have violated this permit.

If any person discharges sewage, industrial wastes or other wastes into the ECUA's wastewater disposal system contrary to the provisions of Chapter 26 of the ECUA Code, national categorical pretreatment requirements, or any order of the ECUA, the ECUA's attorney may commence any action or appropriate legal and/or equitable relief, or the state attorney may be requested to initiate appropriate criminal proceedings.

ADDENDUM II

The permittee shall comply with the following limitations that are included in Chapter 26 of the Emerald Coast Utilities Authority Code:

1. Specified pollutant limitations. No person shall discharge wastewater containing in excess of:

0.85	**mg/l**	**arsenic**
0.50	**mg/l**	**cadmium**
0.25	**mg/l**	**copper**
0.20	**mg/l**	**cyanide**
3.0	**mg/l**	**lead**
0.0005	**mg/l**	**mercury**
0.30	**mg/l**	**nickel**
2.2	**mg/l**	**silver**

The limits listed above are instantaneous maximum allowable discharge limits and apply at the point of connection to the ECUA collection system. Those limits may be superseded by more stringent limitations contained in an industrial discharge permit issued in accordance with subsection 26-3 B of ECUA code.

2. Any wastewater not having a **pH between 5.5 and 12.0**, or wastewater having any other corrosive property capable of causing damage or hazard to structures, equipment and/or personnel of the ECUA. It is recognized that the natural pH of groundwater may at times be less than 5.5. Because of the relatively small volume being pumped, the discharged groundwater having a pH less than 5.5 will not be considered to be a violation of this prohibition.

ADDENDUM III

The permittee shall comply with the following regulations that are included in Chapter 26, section 26-2 of the Emerald Coast Utilities Authority Code:

1. General discharge prohibitions. No user shall contribute or cause to be contributed, directly or indirectly, any pollutant or wastewater which will interfere with the operation or performance of the ECUA's wastewater treatment plants. A user may not contribute the following to the ECUA's sewer system:

   A. Any liquids, solids or gases which by reason of their nature or quantity may be sufficient, either alone, or by interaction with other substances to cause fire or explosion, or be injurious in any way to the sewer system or the operation of the ECUA's wastewater treatment plants. At no time shall 2 successive readings on any explosion hazard meter at the point of discharge into the system (or at any point in the system) be more than 5%, nor any single reading over 10% of the lower explosive limit (LEL) of the meter.

   Prohibited materials include, but are not limited to:

   - Gasoline
   - Kerosene
   - Naphtha
   - Benzene
   - Toluene
   - Xylene
   - Ethers
   - Alcohols
   - Ketones
   - Aldehydes
   - Peroxides
   - Chlorates
   - Perchlorates
   - Bromates
   - Carbides
   - Hydrides
   - Sulfides
   - Any other substances which the ECUA, the State or EPA has notified the user is a fire hazard or a hazard to the system.

B. Any wastewater having a temperature which will inhibit biological activity in the ECUA's wastewater treatment plants resulting in interference, but in no case wastewater with a temperature at the introduction into the ECUA's sewer system which exceeds 150°F or 65°C.

C. Any wastewater containing toxic pollutants in sufficient quantity, either singly or by interaction with other pollutants to injure or interfere with any wastewater treatment process, constitute a hazard to humans or animals, create a toxic effluent in the receiving waters of the ECUA's wastewater treatment plants or to exceed the limitations set forth in a categorical pretreatment standard. A toxic pollutant shall include, but not be limited to, any pollutant identified pursuant to section 307(a) of the Clean Water Act. (This section currently identifies 126 priority pollutants.)

2. In the event of any occurrence of slug discharge, the permittee must:

A. Immediately notify the Water Reclamation Director, or his representative, detailing location, volume, and type of discharge, corrective actions taken, and concentration of pollutants based on sampling and analysis performed at the time of the accident, and

B. Provide written notice within 5 days.

3. General Upset Provisions:

A. Industrial user responsibility in case of an upset: The industrial user shall control production or all discharges to the extent necessary to maintain compliance with pretreatment standards upon reduction, loss, or failure of its treatment facility until the facility is restored or an alternative method of treatment is provided. This requirement applies in the situation where, among other things, the primary source of power of the treatment facility is reduced, lost or fails.

B. Notify ECUA within 24 hours of becoming aware of the upset, with a written submission to be provided within 5 days.

4. General Bypass Provision:

   A. Bypass not violating applicable pretreatment standards or requirements: An industrial user may allow any bypass to occur which does not cause pretreatment standards or requirements to be violated, but only if it is for essential maintenance to assure efficient operation.

   B. Bypass that exceeds applicable pretreatment standards: An industrial user shall submit oral notice of an unanticipated bypass within 24 hours from the time the industrial user becomes aware of the bypass. A written submission shall also be provided within 5 days of the time the industrial user becomes aware of the bypass. The written submission shall contain a description of the bypass and its cause, the duration of the bypass, including exact dates and times; and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent re-occurrence of the bypass.

   C. If an industrial user knows in advance of the need for a bypass, it shall submit a notice to the control authority at least 10 days before the date of the bypass. If the industrial user does not know of the need for a bypass ten days prior to the bypass then the industrial user shall notify the control authority immediately upon knowledge of the need for the bypass.

Model HC6000
Electronic Hi-Lo Pump Switch

Patents Pending

STAK Enterprises' **HydroCheck** Model HC6000 Hi-Lo Pump Switches are **"electronic float" switches** that are designed to work in sump pits that collect ground water from around the home's foundation. They are particularly useful when the **sump pit is very large and may take more than 90 seconds to empty**, or the water table is unusually high and it isn't practical to try and empty the pit every cycle. The real advantage of the Hi-Lo Pump Switch is that it lets **you accurately set where the pump turns on, and where it turns off.** And, unlike traditional float switches, the **HydroCheck** Hi-Lo Pump Switch has no moving parts that can seize up or get wedged between the pump and the wall of the pit and prevent the pump from running, or cause it to run continuously and burn out (See "Why Pumps Fail"). This makes the Hi-Lo Pump Switch many times more reliable than float switches and, because it's electronic, it has features that just aren't available in mechanical switches, such as the **alarms** that are described below. Whether replacing a switch that has already failed or just being pro-active and avoiding the damage that will be done when the switch finally does fail, installing a Model HC600 Hi-Lo Pump Switch just makes sense to prevent basement water damage. ***And it works with all brands of pumps, like Flotec, Simer, Wayne, Ace-in-the-Hole, Rigid, etc.***

$83.99 Buy Now

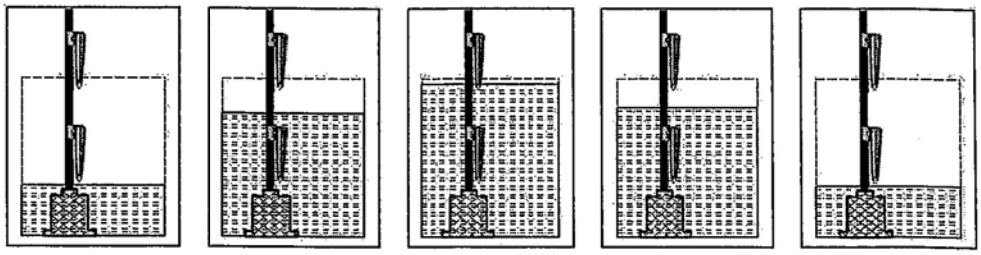
Simple Installation

The **HydroCheck** Model HC6000 Hi-Lo Pump Switch has two sensors and a control module. Installation is simple and, like all our products, doesn't require any changes to your plumbing. The control module is plugged into a 120 VAC outlet and the pump gets plugged directly into the control module. The sensors get positioned in the pit at the level where you want the pump to turn on and the level where you want to turn the pump off. The Model HC6000 switch doesn't care which sensor is the upper sensor, and which one is the lower sensor. It figures that out automatically so the operation of the pump is always correct. View the Installation Instructions for more information. Note, however, that there are special installation requirements if the pit receives water from a water softener. Refer to the Installation with Water Softener instructions for details.

How the Hi-Lo Pump Switch Works

The setting of the sensors determine when the control module turns the pump on, and when it turns it off. Following the sequence below, the operation is as follows:

1. When the water is below both sensors, the pump is off
2. The pump is off when the water is above the lower sensor, but hasn't reached the upper sensor
3. When the water reaches the upper sensor, the pump is turned on
4. The pump stays on while the water is between the sensors
5. The pump is turned off when the water drops below the lower sensor



back to top

Alarms and Indicators

The Hi-Lo Pump Switch has a number of **built in alarms that warn of problems with the pump or discharge plumbing.** The available alarms are described in the table below. Note that the alarms can be disabled by following the steps below:

1. Unplug pump from control module.
2. Lift top sensor out of water.
3. Unplug control module from 120 VAC outlet. Wait 10 seconds.
4. Plug control module back into outlet. Wait 10 seconds.
5. Unplug control module from 120 VAC outlet. Wait 10 seconds.
6. Plug control module back into outlet. Wait 10 seconds.
7. Plug pump back into control module
8. Place top sensor back into water

Alarm/Indicator	Description	Possible Causes
2 Beeps	Can't turn pump on	• Pump not plugged in • Float piggy-back plug not disconnected • Float switch not secured in "on" position (internally wired float switch)
3 Beeps	High Level Alarm	• Pump can't keep up with water coming in • Discharge plumbing blocked • Debris on sensor
Steady Slow Beep	Motor current above normal	• High motor current
Steady Fast Beep	Motor current too high	• Very high motor current
Steady Red LED	Pump off, no water detected	
Flashing Red LED	Pump off, lower sensor detecting water	
Steady Green LED	Pump on, water detected by both sensors	• If this condition exists for more than 30 seconds the high-level alarm will be sounded
Flashing Green LED	Pump on, water below upper sensor

DRILLING RATE SCHEDULE

Contractor Name: _____

Site Name & Location: _____ **Date:** _____ **FAC ID#:** _____

PROPOSED SCOPE OF WORK:

Install two(2) 4-inch by 8-feet recovery wells

DRILLING	Unit	Unit Rate	Number of Units	Extended Price
Rig Type: Auger_____ Mud Rotary_____ Other_____				
Split Spoon Collection (continuous or 5' intervals) (can be used in conjunction with well installation) (includes decon)				
<50 foot boring depth	per foot	$10.79		$0.00
50 foot to 100 foot boring depth	per foot	$14.03		$0.00
>100 foot boring depth (Multiple quotes required)	per foot	NA		
Borehole Grouting				
4 - inch borehole diameter	per foot	$6.56		$0.00
6 - inch borehole diameter	per foot	$9.57		$0.00
8 - inch borehole diameter	per foot	$12.51		$0.00
1" - 2" Well Installation (includes steamcleaning decon, screen, riser, sand pack, seal and grout)				
<50 foot boring depth	per foot	$25.37		$0.00
50 foot to 100 foot boring depth	per foot	$27.46		$0.00
>100 foot boring depth (Multiple quotes required)	per foot	NA		
4" Well Installation (includes steamcleaning decon, screen, riser, sand pack, seal and grout)				
<50 foot boring depth	per foot	$33.34		$0.00
50 foot to 100 foot boring depth	per foot	$35.67		$0.00
>100 foot boring depth (Multiple quotes required)	per foot	NA		
Recovery Well Diameter: 4" - 6"	per foot	$61.84	16	$989.44
Double Cased Wells				
6" Surface Casing	per foot	$40.10		$0.00
8" Surface Casing	per foot	$53.81		$0.00
Well Completion (includes 30 minute development, bolt down MH w/ cover, concrete pad, locking well cap, and saw/jackhammer prep.)	per well	$188.22	2	$376.44
1"- 2" Well Abandonment (includes grouting)	per foot	$6.32		$0.00
3"- 4" Well Abandonment (includes grouting)	per foot	$8.94		$0.00
5"- 6" Well Abandonment (includes grouting)	per foot	$11.64		$0.00
2' x 2' Well Pad Removal and Patch	each	$88.68		$0.00
MISCELLANEOUS				
Mobilization	roundtrip	$560.78	1	$560.78
Per Diem	per person / per night	$128.71		$0.00
DOT Approved 55-gal Drum	each	$52.71	2	$105.42
Permits (Drilling or abandonment only) (only actual costs are accepted)	each (actual)	$100.00	1	$100.00
Other (specify)				$0.00
Other (specify)				$0.00
Other (specify)				$0.00
Additional Development Time (Requires prior approval)	per hour	$138.84		$0.00
Additional Decontamination Time (Requires prior approval)	per hour	$134.69		$0.00
Standby/Delay/Difficult Access Time (Requires prior approval)	per hour	$198.94		$0.00
			TOTAL PRICE	**$2,132.08**

Days to Complete Scope of Work: _____ **Project No.:** _____

Mr. Mark Faulkner
Baptist Hospital, Inc.
1000 W Moreno St
Pensacola, FL 32501

Subject: **Conditional Site Rehabilitation Completion Order (CSRCO)**
Baptist Hospital
1000 West Moreno Street
Pensacola, Escambia County
FDEP Facility ID# 178626031
OGC Case No. 21-0290
Parcel Identification Number 000S009050001058
Discharge Date: October 19, 2009 (Non-program)
Discharge Score: 64

Dear Mr. Faulkner:

The Petroleum Restoration Program of the Florida Department of Environmental Protection (DEP or Department) has reviewed the Supplemental Site Assessment Report that includes a Conditional No Further Action (NFA) Proposal (Conditional NFA Proposal), dated May 2, 2017, for Baptist Hospital, for the petroleum discharge. Maps showing the location of Baptist Hospital and the location of the "contaminated site" (i.e., contaminant plume) for which this Order is being issued are attached as Exhibits 1 and 2 and are incorporated by reference herein. Failure to comply with the provisions of this Order is a violation of section 376.302, Florida Statutes (F.S.). The contaminated site includes the following parcels or parts of parcels: 1000 W Moreno St., Pensacola, Florida 32501, Parcel ID 000S009050001058.

The contamination, which resulted from a discharge that was discovered on October 19, 2009, consisted of petroleum and petroleum products. The discharge resulted from a leak in the fuel piping associated with underground storage tanks. The Conditional NFA Proposal is supported by earlier submittals, prepared pursuant to the requirements of Chapter 62-780, Florida Administrative Code (F.A.C.), which can be found in DEP document repository, Oculus at https://depedms.dep.state.fl.us/Oculus/servlet/hitlist?action=sort

Based on the documentation submitted with the Conditional NFA Proposal and other documents, DEP has reasonable assurance that the criteria in Chapter 62-780, have been met, including the commitments set forth in the technical submittals with respect to the establishment and use and recordation of institutional controls. The documents attached as Exhibit 4 for contaminants remaining at the contaminated site, in conjunction with appropriate institutional controls, detail the controls and conditions for the contaminated site. Contaminants remaining at the contaminated site are limited to groundwater. Therefore, you have satisfied the site rehabilitation requirements for the contaminated site and are released from any further obligation to conduct site rehabilitation at the contaminated site, except as set forth below. See attached table (Exhibit 3), incorporated by reference herein, which includes information regarding the contaminants; affected media; and applicable cleanup target levels established for the contaminated site that is the subject of this Order.

The following, including this Order, establish the institutional controls for the contaminated site and any change to the risk of exposure to any contamination or destabilization of any groundwater contamination that results from either failing to comply with the institutional controls or any change, amendment, revocation, or repeal of the institutional controls will result in the revocation of this Order.

Declaration of Restrictive Covenant (DRC). A DRC was recorded by Baptist Hospital, Inc., on January 10, 2022, in Official Record Book/Instrument# 8704, Page 939, Public Records of Escambia County, Florida, and is attached and incorporated by reference as Exhibit 4. Any current or future real property owner of the contaminated site must comply with the provisions contained within the DRC, (attached) recorded or otherwise established prior to the execution of this Order.

Dewatering. DEP will rely on Rule 62-621.300, F.A.C., and the guidance incorporated therein to ensure that no exposure to contaminated groundwater resulting in risk to human health, public safety or the environment will occur due to dewatering activities on the contaminated site. DEP Rule 62-621.300, F.A.C., requires a permit when conducting dewatering in the area of a contaminated site. Any person intending to conduct dewatering within the contaminated site must submit to DEP DWM a dewatering plan signed and sealed by a Florida-registered professional engineer or Florida-registered professional geologist that ensures the appropriate handling, treatment, and disposal of any extracted groundwater that may be contaminated to avoid adversely impacting or increasing the potential for exposure to contaminants resulting in risk to human health, public safety or the environment. The plan must include the location(s) of the dewatering activity and the effluent disposal area(s) relative to known areas of groundwater contamination, proposed flow rate, duration, volume, estimated drawdown, (based upon design calculations), a technical evaluation demonstrating that the dewatering will not cause the migration of contamination and procedures for proper characterization, treatment, handling and disposal of any contaminated groundwater that may be encountered during dewatering. DEP DWM will keep the plan in the site file as

documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The PRSR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. Unless it is demonstrated that the cleanup criteria under Subsection 62-780.680(1), F.A.C., have been achieved, DEP, in addition to other remedies available at law, may institute proceedings to revoke this Order and require the resumption of site rehabilitation activities if any dewatering activities are commenced without submittal of such a plan. See attached and incorporated by reference Exhibit 4.

Stormwater features. DEP will rely on a plan signed and sealed by a Florida-registered professional engineer or Florida-registered professional geologist to construct new or modify existing stormwater features to ensure that there is no exposure to contaminated groundwater entering into new or expanded stormwater features resulting in risk to human health, public safety or the environment due to the contaminated site. The plan must include the feature location, construction and design specifications relative to known areas of soil and groundwater contamination, and a technical evaluation (including calculations, fate and transport modeling, as applicable) to demonstrate that the new stormwater facilities will not cause the migration of contamination. The plan shall also outline the procedures for proper characterization, handling and disposal of any contaminated media that may be encountered during construction. DEP DWM will keep the plan in the site file as documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The PRSR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. Construction of stormwater swales, stormwater detention or retention features, or ditches on the contaminated site subject to these restrictions could destabilize the groundwater plume or increase potential for exposure to contaminants resulting in risk to human health, public safety, or the environment. For this reason, parties seeking to construct stormwater features on the contaminated site subject to these restrictions must submit the above plan to DEP in addition to obtaining any authorizations that may be required by DEP's Division of Water Resource Management, the Water Management District or other federal, state, or local laws and regulations that may apply to this activity. Unless it is demonstrated that the cleanup criteria under Subsection 62-780.680(1), F.A.C., have been achieved, DEP, in addition to other remedies available at law, may institute proceedings to revoke this Order and require the resumption of site rehabilitation activities if any such stormwater features are constructed or commenced without submittal of such a plan. See attached and incorporated by reference Exhibit 4.

Removal of controls. Where the institutional control is a restrictive covenant, if the current or future real property owner of the contaminated site proposes to remove it, the real property owner shall obtain prior written approval from DEP. For all types of

institutional controls, the removal of the controls shall be accompanied by the immediate resumption of site rehabilitation or implementation of other approved controls, unless it is demonstrated to DEP that the criteria of Subsection 62-780.680(1), F.A.C., are met.

Well abandonment. Within 60 days of receipt of this Order, Baptist Hospital, Inc., is required to properly plug and abandon all monitoring wells, injection wells, extraction wells and sparge wells unless these wells are otherwise required for compliance with a local ordinance, a DEP rule or another cleanup. The wells must be plugged and abandoned in accordance with the requirements of Subsection 62-532.500(5), F.A.C. A Well Plugging Report shall be submitted to DEP within 30 days of well plugging.

Future owners and users of the contaminated site should be made aware of the existence and contents of this Order. Additionally, information about the contaminated site will be maintained on the Institutional Controls Registry at https://floridadep.gov/waste/waste/content/institutional-controls-registry-guidance

Further, in accordance with Section 376.30701(4), F.S., upon completion of site rehabilitation, additional site rehabilitation is not required unless it is demonstrated that:

(a) Fraud was committed in demonstrating site conditions or completion of site rehabilitation;

(b) New information confirms the existence of an area of previously unknown contamination which exceeds the site-specific rehabilitation levels established in accordance with Section 376.30701(2), F.S., or which otherwise poses the threat of real and substantial harm to public health, safety, or the environment;

(c) The remediation efforts failed to achieve the site rehabilitation criteria established under this section;

(d) The level of risk is increased beyond the acceptable risk established under Section 376.30701(2), F.S., due to substantial changes in exposure conditions, such as a change in land use from nonresidential to residential use. Any person who changes the land use of the site, thereby causing the level of risk to increase beyond the acceptable risk level, may be required by DEP to undertake additional remediation measures to ensure that human health, public safety, and the environment are protected consistent with Section 376.30701, F.S.; or

(e) A new discharge of pollutants or hazardous substances occurs at the site subsequent to the issuance of this Order.

NOTICE OF RIGHTS

This action is final and effective on the date filed with the Clerk of the Department unless a petition for an administrative hearing is timely filed under Sections 120.569 and 120.57, F.S., before the deadline for filing a petition. On the filing of a timely and sufficient petition, this action will not be final and effective until a subsequent order of the Department. Because the administrative hearing process is designed to formulate final agency action, the subsequent order may modify or take a different position than this action.

Petition for Administrative Hearing

A person whose substantial interests are affected by the Department's action may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. Pursuant to Rules 28-106.201 and 28-106.301, F.A.C., a petition for an administrative hearing must contain the following information:

(a) The name and address of each agency affected and each agency's file or identification number, if known;
(b) The name, address, any e-mail address, any facsimile number, and telephone number of the petitioner, if the petitioner is not represented by an attorney or a qualified representative; the name, address, and telephone number of the petitioner's representative, if any, which shall be the address for service purposes during the course of the proceeding; and an explanation of how the petitioner's substantial interests will be affected by the agency determination;
(c) A statement of when and how the petitioner received notice of the agency decision;
(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;
(e) A concise statement of the ultimate facts alleged, including the specific facts that the petitioner contends warrant reversal or modification of the agency's proposed action;
(f) A statement of the specific rules or statutes that the petitioner contends require reversal or modification of the agency's proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
(g) A statement of the relief sought by the petitioner, stating precisely the action that the petitioner wishes the agency to take with respect to the agency's proposed action.

The petition must be filed (received by the Clerk) in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@FloridaDEP.gov. Also, a copy of the petition shall be mailed to the addressee of this order at the address indicated above at the time of filing.

Time Period for Filing a Petition

In accordance with Rule 62-110.106(3), F.A.C., petitions for an administrative hearing by the addressee of this order must be filed within **21** days of receipt of this written notice. Petitions filed by any persons other than the addressee of this order must be filed within **21** days of publication of the notice or within **21** days of receipt of the written notice, whichever occurs first.

The failure to file a petition within the appropriate time period shall constitute a waiver of that person's right to request an administrative determination (hearing) under Sections 120.569 and 120.57, F.S., or to intervene in this proceeding and participate as a party to it. Any subsequent intervention (in a proceeding initiated by another party) will be only at the discretion of the presiding officer upon the filing of a motion in compliance with Rule 28-106.205, F.A.C. If you do not publish notice of this action, this waiver may not apply to persons who have not received a clear point of entry.

Extension of Time

Under Rule 62-110.106(4), F.A.C., a person whose substantial interests are affected by the Department's action may also request an extension of time to file a petition for an administrative hearing. The Department may, for good cause shown, grant the request for an extension of time. Requests for extension of time must be filed with the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@FloridaDEP.gov, before the deadline for filing a petition for an administrative hearing. A timely request for extension of time shall toll the running of the time period for filing a petition until the request is acted upon.

Mediation

Mediation is not available in this proceeding.

Judicial Review

Once this decision becomes final, any party to this action has the right to seek judicial review pursuant to Section 120.68, F.S., by filing a Notice of Appeal pursuant to Florida Rules of Appellate Procedure 9.110 and 9.190 with the Clerk of the Department in the Office of General Counsel (Station #35, 3900 Commonwealth Boulevard, Tallahassee, Florida 32399-3000) and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice must be filed within 30 days from the date this action is filed with the Clerk of the Department.

Questions

Any questions regarding DEP's review of your Conditional NFA Proposal should be directed to Robert Jake Gallman at 850-595-6700 extension 2056 or Robert.gallman@flhealth.gov. Questions regarding legal issues should be referred to DEP Office of General Counsel at 850-245-2242. Contact with any of the above does not constitute a petition for administrative hearing or request for an extension of time to file a petition for administrative hearing.

EXECUTION AND CLERKING

FROM: **Natasha Lampkin, Program Administrator, Petroleum Restoration Program** Natasha Lampkin Digitally signed by Natasha Lampkin Date: 2022.05.17 14:32:36 -04'00'

SUBJECT: **Delegations of Authority**

DATE: **5/17/2022**

In accordance with DEP Directive 100, the following referenced delegation(s) are hereby delegated to the delegate(s) listed.

Delegation Reference	Delegate(s)
DEL-16 Permitting Authority: For their respective divisions, take agency action on all orders, certifications, agreements, permits, general permits, generic permits, exemptions, and exception applications, including modifications and extensions.	• Kenneth Busen, Environmental Administrator, Petroleum Restoration Program

Limitations to the delegation(s): Limited to the following Approvals for Petroleum Cleanup Sites: Site Rehabilitation Completion Orders, Conditional Site Rehabilitation Completion Orders, Low Scored Site Initiative No Further Action Orders, Underground Injection Control Approval Orders, Remedial Action Plan Approval Orders, Interim Source Removal Proposal Approval Order and Monitoring Plan Approvals only and does not include any other agreements, orders, certifications, permits, exemptions, exceptions, modifications or extensions.

The exercise of these delegations shall be consistent with all applicable rules, statutes, administrative directives, policies and procedures. These delegations should be exercised with a high degree of judgment and caution. If there is any doubt whether exercising this delegated authority is inconsistent with any of the above limitations, the person whom the authority is delegated shall not exercise the authority without first consulting Natasha Lampkin, Program Administrator, Petroleum Restoration Program.

This delegation of authority revokes, replaces, and supersedes all previous delegations within the Petroleum Restoration Program.

This delegation is temporary and will be in effect from June 1, 2022 through June 3, 2022 and June 7, 2022.

DECLARATION OF RESTRICTIVE COVENANT

THIS DECLARATION OF RESTRICTIVE COVENANT (hereinafter "Declaration") is made this 10th day of January, 2022 by Baptist Hospital, Inc., a Florida Not for Profit Corporation (hereinafter "GRANTOR"), and the Florida Department of Environmental Protection (hereinafter "FDEP"). This Declaration is neither extinguished nor affected by the Marketable Record Title Act pursuant to section 712.03, Florida Statutes (F.S.)

RECITALS

A. GRANTOR is the fee simple owner of that certain real property situated in the County of Escambia, State of Florida, more particularly described in Exhibit "A" attached hereto and made a part hereof (the "Property"). The portion of the Property that is being restricted by this Declaration is more particularly described in Exhibit "B" attached hereto and made a part hereof (hereinafter the "Restricted Property").

B The FDEP Facility Identification Number is 178626031. The facility name at the time of this Declaration is Baptist Hospital, 1000 West Moreno Street, Pensacola, Escambia County, Florida. This Declaration addresses the discharge or contamination that was reported to the FDEP on October 19, 2009.

C. Petroleum staining was observed at the Restricted Property during closure of two 10,000 gallon underground storage tanks ("USTs"), which prompted submission of a Discharge Report Form on March 1, 2010, and closure in place of the USTs. Closure assessment activities revealed contaminated soil and pea gravel backfill, which was removed from the Restricted Property during the UST closure. Subsequent assessments revealed groundwater contamination that has been remediated through the operation of a groundwater extraction system beginning on October 18, 2012. The discharge of petroleum, UST closure, assessments, and remediation actions on the Restricted Property are documented in the following reports that are incorporated by reference:

1. Site Assessment Report dated March 24, 2010, submitted by Enviro Pro Tech;
2. Remedial Action Plan dated April 19, 2012, submitted by Enviro Pro Tech;
3. Supplemental Site Assessment Report dated January 13, 2016, submitted by Enviro Pro Tech;

4. Supplemental Site Assessment Report dated May 2, 2017, submitted by Enviro Pro Tech;

5. Confirmatory Soil Sampling & Analysis Letter Report dated April 25, 2019, submitted by Cameron-Cole, LLC;

6. Addendum to April 25, 2019 Confirmatory Soil Sampling & Analysis Letter Report dated June 25, 2019, submitted by Cameron-Cole, LLC.

D. The reports noted in Recital C set forth the nature and extent of the contamination that is located on the Restricted Property. These reports confirm that contaminated groundwater as defined by Chapter 62-780, Florida Administrative Code (F.A.C.), exists on the Restricted Property. Also, these reports document that the extent of the groundwater contamination does not extend beyond the Restricted Property boundary, that the extent of the groundwater contamination does not exceed 1/4 acre, and that the groundwater contamination is not migrating.

E. It is GRANTOR's and FDEP's intent that the restrictions in this Declaration reduce or eliminate the risk of exposure of users or occupants of the Restricted Property and the environment to the contaminants and to reduce or eliminate the threat of migration of the contaminants.

F. FDEP has agreed to issue a Conditional Site Rehabilitation Completion Order (hereinafter "Order") upon recordation of this Declaration. FDEP can unilaterally revoke the Order if the conditions of this Declaration or of the Order are not met. Additionally, if concentrations of petroleum products' chemicals of concern increase above the levels approved in the Order, or if a subsequent discharge occurs at the Restricted Property, FDEP may require site rehabilitation to reduce concentrations of contamination to the levels allowed by the applicable FDEP rules. The Order relating to FDEP Facility ID 178626031 can be found by contacting the Northwest FDEP district office.

G. GRANTOR deems it desirable and in the best interest of all present and future owners of the Restricted Property that an Order be obtained and that the Restricted Property be held subject to certain restrictions, all of which are more particularly hereinafter set forth.

NOW, THEREFORE, to induce FDEP to issue the Order and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged by each of the undersigned parties, GRANTOR agrees as follows:

1. The foregoing recitals are true and correct and are incorporated herein by reference.

2. GRANTOR hereby imposes on the Restricted Property the following restrictions:

a. Groundwater Use. There shall be no use of the groundwater under the Restricted Property. There shall be no drilling for water conducted on the Restricted

Property, nor shall any wells be installed on the Restricted Property other than monitoring or other wells pre-approved in writing by FDEP Division of Waste Management (DWM) in addition to any authorizations required by the FDEP Division of Water Resource Management (DWRM) and the applicable Water Management District (WMD).

b. Dewatering. For any dewatering activities on the Restricted Property, a plan signed and sealed by a Florida-registered professional engineer or Florida-registered professional geologist to address and ensure the appropriate handling, treatment and disposal of any extracted groundwater that may be contaminated must be submitted to FDEP's DWM. The plan must include the location(s) of the dewatering activity and the effluent disposal area(s) relative to known areas of groundwater contamination, proposed flow rates, duration, volume, estimated drawdown, (based upon design calculations), a technical evaluation demonstrating that the dewatering will not cause the migration of contamination and procedures for proper characterization, treatment and handling of any contaminated groundwater that may be encountered during dewatering. FDEP's DWM will keep the plan in the site file as documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The GRANTOR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. FDEP will rely on this Declaration, Rule 62-621.300, F.A.C., and the guidance incorporated therein, and the signed and sealed dewatering plan as the institutional controls to ensure that no exposure to contaminated groundwater resulting in risk to human health, public safety or the environment will occur due to dewatering activities on the contaminated site. Rule 62-621.300, F.A.C., requires a permit when conducting dewatering in the area of a contaminated site. For this reason, if GRANTOR seeks to conduct dewatering on the Restricted Property, GRANTOR shall submit the signed and sealed plan to FDEP DWM in addition to obtaining any authorizations that may be required by FDEP DWRM, the WMD, or other federal, state, or local laws and regulations that may apply to this activity. The dewatering plan must ensure the appropriate handling, treatment, and disposal of any extracted groundwater that may be contaminated to avoid adversely impacting or increasing the potential for exposure to contaminants resulting in risk to human health, public safety or the environment. Unless it is demonstrated that the cleanup criteria under subsection 62-780.680(1), F.A.C., have been achieved, FDEP, in addition to other remedies available at law, may institute proceedings to revoke this Declaration and the Conditional Site Rehabilitation Completion Order and require the resumption of site rehabilitation activities if any dewatering activities are commenced without submittal of a signed and sealed plan.

c. Stormwater Facilities. There shall be no stormwater swales, stormwater detection or retention facilities, or ditches on the Restricted Property. If stormwater features must be constructed, modified, altered or expanded, a plan signed and

sealed by a Florida-registered professional engineer or a Florida-registered professional geologist must be submitted to FDEP's DWM in addition to any authorizations required by the DWRM and the WMD. The plan must include the feature location, construction and design specifications relative to known areas of soil and groundwater contamination, and a technical evaluation (including calculations, fate and transport modeling, as applicable) to demonstrate that the new stormwater facilities will not cause the migration of contamination. The plan shall also outline the procedures for proper characterization, handling and disposal of any contaminated media that may be encountered during construction. FDEP's DWM will keep the plan in the site file as documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The GRANTOR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. A revised exhibit must be amended to the Declaration and recorded when any stormwater feature is altered, modified, expanded, or constructed. FDEP will rely on this Declaration and certified plan to construct new or modify existing stormwater features to ensure that there is no exposure to contaminated groundwater entering into new or expanded stormwater features resulting in risk to human health, public safety or the environment due to the contaminated site. Construction of stormwater swales, stormwater detention or retention features, or ditches on the Restricted Property could destabilize the groundwater plume or increase potential for exposure to contaminants resulting in risk to human health, public safety, or the environment. For this reason, if GRANTOR seeks to construct stormwater features on the Restricted Property, GRANTOR shall submit the certified plan to FDEP DWM in addition to obtaining any authorizations that may be required by FDEP DWRM, the WMD, or other federal, state, or local laws and regulations that may apply to this activity. Unless it is demonstrated that the cleanup criteria under subsection 62-780.680(1), F.A.C., have been achieved, FDEP, in addition to other remedies available under law, may institute proceedings to revoke this Declaration and the Conditional Site Rehabilitation Completion Order, and require the resumption of site rehabilitation activities if any such stormwater features are constructed or commenced without submittal of a certified plan.

3. In the remaining paragraphs, all references to "GRANTOR" and "FDEP" shall also mean and refer to their respective successors and assigns.

4. For the purpose of monitoring the restrictions contained herein, FDEP is hereby granted a right of entry upon, over and through, and access to the Restricted Property at reasonable times and with reasonable notice to GRANTOR. Access to the Restricted Property is granted via providing access to the Property located at 1000 W. Moreno St., Pensacola, Florida 32501, and as defined in Exhibit A.

5. It is the intention of GRANTOR that this Declaration shall touch and concern the Restricted Property, run with the land and with the title to the Restricted Property, and shall

apply to and be binding upon and inure to the benefit of GRANTOR and FDEP, and to any and all parties hereafter having any right, title or interest in the Restricted Property or any part thereof. FDEP may enforce the terms and conditions of this Declaration by injunctive relief and other appropriate available legal remedies. Any forbearance on behalf of FDEP to exercise its right in the event of the failure of the GRANTOR to comply with the provisions of this Declaration shall not be deemed or construed to be a waiver of FDEP's rights hereunder. This Declaration shall continue in perpetuity, unless otherwise modified in writing by GRANTOR and FDEP as provided in paragraph 7 below. These restrictions may also be enforced in a court of competent jurisdiction by any other person, firm, corporation, or governmental agency that is substantially benefited by these restrictions. If the GRANTOR does not or will not be able to comply with any or all of the provisions of this Declaration, the GRANTOR shall notify FDEP in writing within three (3) calendar days. Additionally, GRANTOR shall notify FDEP thirty (30) days prior to any conveyance or sale, granting or transferring the Restricted Property or portion thereof, to any heirs, successors, assigns or grantees, including, without limitation, the conveyance of any security interest in said Restricted Property.

6. In order to ensure the perpetual nature of this Declaration, GRANTOR shall reference these restrictions in any subsequent lease or deed of conveyance, including the recording book and page of record of this Declaration. Furthermore, prior to the entry into a landlord-tenant relationship with respect to the Restricted Property, the GRANTOR agrees to notify in writing all proposed tenants of the Restricted Property of the existence and contents of this Declaration of Restrictive Covenant. Without limiting the generality of paragraph 3 above, it is the intention of the parties that if GRANTOR has conveyed the Restricted Property, the GRANTOR's successors and assigns shall be required to perform such notification.

7. This Declaration is binding until a release of covenant is executed by the FDEP Secretary (or designee) and is recorded in the public records of the county in which the land is located. To receive prior approval from the FDEP to remove any requirement herein, cleanup target levels established pursuant to Florida Statutes and FDEP rules must be achieved. This Declaration may be modified in writing only. Any subsequent amendments must be executed by both GRANTOR and FDEP and be recorded by GRANTOR as an amendment hereto.

8. If any provision of this Declaration is held to be invalid by any court of competent jurisdiction, the invalidity of that provision shall not affect the validity of any other provisions of the Declaration. All such other provisions shall continue unimpaired in full force and effect.

9. GRANTOR covenants and represents that on the date of execution of this Declaration that GRANTOR is seized of the Restricted Property in fee simple and has good right to create, establish, and impose this restrictive covenant on the use of the Property.

EXHIBIT "A"

Legal Description of the Property

Beginning at the northwest corner of Fractional Section twenty-seven (27), Township two (2) south, Range thirty (30) west, and run thence south on the west line of said Section a distance of six hundred sixty (660) feet, thence in an easterly direction seven hundred thirty-two (732) feet, thence northward five hundred thirty-eight (538) feet to the north line of the said Section, thence along said north line six hundred forty-two (642) feet to the point of beginning, containing nine (9) acres, more or less, all lying and being in said Section twenty-seven (27), excepting therefrom that portion of the above described parcel that lies west of an extension northward of the west line of "G" Street as shown on the plat of North Hill Highlands recorded in Deed Book 62 at page 244 of the records of said County.

And also all of said right, title, and interest in and to any portions of Blocks 58, 59, 60 and 61 of said North Hill Highlands.

AND ALSO

All that portion of fractional Section 27, Township 2 South, Range 30 West, lying North of the North line of Moreno Street and lying West of an extension Northward of the West line of "G" Street as shown on Plat of North Hill Highlands recorded in Deed Book 62, at Page 244 of the public records of Escambia County, Florida, except property conveyed to Raymond P. Brown by Deed dated May 14, 1927, and recorded in Deed Book 122, at Page 106, of the records of said County, which said excepted parcel is described as beginning at the intersection of the West line of said "G" Street with the North line of Moreno Street (formerly Madison Street) for point-of-beginning, and thence run West along the North line of Moreno Street 150 feet; thence North at the right angles 150 feet; thence East at right angles 150 feet to the West line of an extension Northward of the West line of said "G" Street; and thence run South along the West line of an extension Northward of the West line of the said "G" Street a distance of 150 feet to point-of-beginning.

Said parcels being one and the same as those described in Deed Book 420, at Page 133; Deed Book 254, Page 269, and Deed Book 227, Page 501, all of the public records of Escambia County, Florida.

EXHIBIT "B"

Legal Description and Survey of the Restricted Property

Commence at the Intersection of the north right of way line of Avery Street (55' R/W) and the east right of way line of "H" Street (50' R/W); thence South 85 degrees 43'24" East along said north right of way line for a distance of 224.15 feet; thence South 04 degrees 12'56" West for a distance of 88.97 feet for the point of beginning (Northing 530579.41, Easting 1107535.93, State Plane Coordinates referenced to N.A.D. 83 datum, 2011 adjustment, Florida North Zone).

Thence continue South 04 degrees 12'56" West for a distance of 200.00 feet (Northing 530379.95, Easting 1107521.23); thence South 85 degrees 47'04" East for a distance of 200.00 feet (Northing 530365.25, Easting 1107720.69); thence North 04 degrees 12'56" East for a distance of 200.00 feet (Northing 530564.71, Easting 1107735.39); thence North 85 degrees 47'04" West for a distance of 200.00 feet to the point of beginning.

All lying and being in Sections 18 & 27, Township 2 South, Range 30 West, Escambia County, Florida. Containing 0.92 acres, more or less.

SURVEYOR'S NOTES:

1. Subject to setbacks, easements and restrictions of record.
2. This sketch is subject to any facts that may be disclosed by a full and accurate title search. No title work performed by this firm.
3. This sketch does not reflect or determine ownership.
4. This property may be subject to setback lines mandated by zoning ordinances and/or restrictive covenants of record.
5. Sub-surface improvements, if any, not located.
6. The underground utilities shown have been located from field survey information and existing drawings. The surveyor has not physically located the underground utilities. The surveyor does not certify that the underground utilities shown comprise all such utilities or that they are the exact size, material, or location as indicated.
7. Coordinates shown are State Plane Coordinates referenced to N.A.D. 83 datum, 2011 adjustment, Florida North Zone and expressed in U.S. survey feet.
8. Coordinates are derived by using the Trimble and Florida Department of Transportation continuously operating reference station (CORS) network.
9. NOT A BOUNDARY SURVEY.

Mr. Mark Faulkner
Baptist Hospital, Inc.
1000 W Moreno St
Pensacola, FL 32501

Subject: **Conditional Site Rehabilitation Completion Order (CSRCO)**
Baptist Hospital
1000 West Moreno Street
Pensacola, Escambia County
FDEP Facility ID# 178626031
OGC Case No. 21-0290
Parcel Identification Number 000S009050001058
Discharge Date: October 19, 2009 (Non-program)
Discharge Score: 64

Dear Mr. Faulkner:

The Petroleum Restoration Program of the Florida Department of Environmental Protection (DEP or Department) has reviewed the Supplemental Site Assessment Report that includes a Conditional No Further Action (NFA) Proposal (Conditional NFA Proposal), dated May 2, 2017, for Baptist Hospital, for the petroleum discharge. Maps showing the location of Baptist Hospital and the location of the "contaminated site" (i.e., contaminant plume) for which this Order is being issued are attached as Exhibits 1 and 2 and are incorporated by reference herein. Failure to comply with the provisions of this Order is a violation of section 376.302, Florida Statutes (F.S.). The contaminated site includes the following parcels or parts of parcels: 1000 W Moreno St., Pensacola, Florida 32501, Parcel ID 000S009050001058.

The contamination, which resulted from a discharge that was discovered on October 19, 2009, consisted of petroleum and petroleum products. The discharge resulted from a leak in the fuel piping associated with underground storage tanks. The Conditional NFA Proposal is supported by earlier submittals, prepared pursuant to the requirements of Chapter 62-780, Florida Administrative Code (F.A.C.), which can be found in DEP document repository, Oculus at https://depedms.dep.state.fl.us/Oculus/servlet/hitlist?action=sort

Based on the documentation submitted with the Conditional NFA Proposal and other documents, DEP has reasonable assurance that the criteria in Chapter 62-780, have been met, including the commitments set forth in the technical submittals with respect to the establishment and use and recordation of institutional controls. The documents attached as Exhibit 4 for contaminants remaining at the contaminated site, in conjunction with appropriate institutional controls, detail the controls and conditions for the contaminated site. Contaminants remaining at the contaminated site are limited to groundwater. Therefore, you have satisfied the site rehabilitation requirements for the contaminated site and are released from any further obligation to conduct site rehabilitation at the contaminated site, except as set forth below. See attached table (Exhibit 3), incorporated by reference herein, which includes information regarding the contaminants; affected media; and applicable cleanup target levels established for the contaminated site that is the subject of this Order.

The following, including this Order, establish the institutional controls for the contaminated site and any change to the risk of exposure to any contamination or destabilization of any groundwater contamination that results from either failing to comply with the institutional controls or any change, amendment, revocation, or repeal of the institutional controls will result in the revocation of this Order.

Declaration of Restrictive Covenant (DRC). A DRC was recorded by Baptist Hospital, Inc., on January 10, 2022, in Official Record Book/Instrument# 8704, Page 939, Public Records of Escambia County, Florida, and is attached and incorporated by reference as Exhibit 4. Any current or future real property owner of the contaminated site must comply with the provisions contained within the DRC, (attached) recorded or otherwise established prior to the execution of this Order.

Dewatering. DEP will rely on Rule 62-621.300, F.A.C., and the guidance incorporated therein to ensure that no exposure to contaminated groundwater resulting in risk to human health, public safety or the environment will occur due to dewatering activities on the contaminated site. DEP Rule 62-621.300, F.A.C., requires a permit when conducting dewatering in the area of a contaminated site. Any person intending to conduct dewatering within the contaminated site must submit to DEP DWM a dewatering plan signed and sealed by a Florida-registered professional engineer or Florida-registered professional geologist that ensures the appropriate handling, treatment, and disposal of any extracted groundwater that may be contaminated to avoid adversely impacting or increasing the potential for exposure to contaminants resulting in risk to human health, public safety or the environment. The plan must include the location(s) of the dewatering activity and the effluent disposal area(s) relative to known areas of groundwater contamination, proposed flow rate, duration, volume, estimated drawdown, (based upon design calculations), a technical evaluation demonstrating that the dewatering will not cause the migration of contamination and procedures for proper characterization, treatment, handling and disposal of any contaminated groundwater that may be encountered during dewatering. DEP DWM will keep the plan in the site file as

documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The PRSR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. Unless it is demonstrated that the cleanup criteria under Subsection 62-780.680(1), F.A.C., have been achieved, DEP, in addition to other remedies available at law, may institute proceedings to revoke this Order and require the resumption of site rehabilitation activities if any dewatering activities are commenced without submittal of such a plan. See attached and incorporated by reference Exhibit 4.

Stormwater features. DEP will rely on a plan signed and sealed by a Florida-registered professional engineer or Florida-registered professional geologist to construct new or modify existing stormwater features to ensure that there is no exposure to contaminated groundwater entering into new or expanded stormwater features resulting in risk to human health, public safety or the environment due to the contaminated site. The plan must include the feature location, construction and design specifications relative to known areas of soil and groundwater contamination, and a technical evaluation (including calculations, fate and transport modeling, as applicable) to demonstrate that the new stormwater facilities will not cause the migration of contamination. The plan shall also outline the procedures for proper characterization, handling and disposal of any contaminated media that may be encountered during construction. DEP DWM will keep the plan in the site file as documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The PRSR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. Construction of stormwater swales, stormwater detention or retention features, or ditches on the contaminated site subject to these restrictions could destabilize the groundwater plume or increase potential for exposure to contaminants resulting in risk to human health, public safety, or the environment. For this reason, parties seeking to construct stormwater features on the contaminated site subject to these restrictions must submit the above plan to DEP in addition to obtaining any authorizations that may be required by DEP's Division of Water Resource Management, the Water Management District or other federal, state, or local laws and regulations that may apply to this activity. Unless it is demonstrated that the cleanup criteria under Subsection 62-780.680(1), F.A.C., have been achieved, DEP, in addition to other remedies available at law, may institute proceedings to revoke this Order and require the resumption of site rehabilitation activities if any such stormwater features are constructed or commenced without submittal of such a plan. See attached and incorporated by reference Exhibit 4.

Removal of controls. Where the institutional control is a restrictive covenant, if the current or future real property owner of the contaminated site proposes to remove it, the real property owner shall obtain prior written approval from DEP. For all types of

institutional controls, the removal of the controls shall be accompanied by the immediate resumption of site rehabilitation or implementation of other approved controls, unless it is demonstrated to DEP that the criteria of Subsection 62-780.680(1), F.A.C., are met.

Well abandonment. Within 60 days of receipt of this Order, Baptist Hospital, Inc., is required to properly plug and abandon all monitoring wells, injection wells, extraction wells and sparge wells unless these wells are otherwise required for compliance with a local ordinance, a DEP rule or another cleanup. The wells must be plugged and abandoned in accordance with the requirements of Subsection 62-532.500(5), F.A.C. A Well Plugging Report shall be submitted to DEP within 30 days of well plugging.

Future owners and users of the contaminated site should be made aware of the existence and contents of this Order. Additionally, information about the contaminated site will be maintained on the Institutional Controls Registry at https://floridadep.gov/waste/waste/content/institutional-controls-registry-guidance

Further, in accordance with Section 376.30701(4), F.S., upon completion of site rehabilitation, additional site rehabilitation is not required unless it is demonstrated that:

(a) Fraud was committed in demonstrating site conditions or completion of site rehabilitation;

(b) New information confirms the existence of an area of previously unknown contamination which exceeds the site-specific rehabilitation levels established in accordance with Section 376.30701(2), F.S., or which otherwise poses the threat of real and substantial harm to public health, safety, or the environment;

(c) The remediation efforts failed to achieve the site rehabilitation criteria established under this section;

(d) The level of risk is increased beyond the acceptable risk established under Section 376.30701(2), F.S., due to substantial changes in exposure conditions, such as a change in land use from nonresidential to residential use. Any person who changes the land use of the site, thereby causing the level of risk to increase beyond the acceptable risk level, may be required by DEP to undertake additional remediation measures to ensure that human health, public safety, and the environment are protected consistent with Section 376.30701, F.S.; or

(e) A new discharge of pollutants or hazardous substances occurs at the site subsequent to the issuance of this Order.

NOTICE OF RIGHTS

This action is final and effective on the date filed with the Clerk of the Department unless a petition for an administrative hearing is timely filed under Sections 120.569 and 120.57, F.S., before the deadline for filing a petition. On the filing of a timely and sufficient petition, this action will not be final and effective until a subsequent order of the Department. Because the administrative hearing process is designed to formulate final agency action, the subsequent order may modify or take a different position than this action.

Petition for Administrative Hearing

A person whose substantial interests are affected by the Department's action may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. Pursuant to Rules 28-106.201 and 28-106.301, F.A.C., a petition for an administrative hearing must contain the following information:

(a) The name and address of each agency affected and each agency's file or identification number, if known;
(b) The name, address, any e-mail address, any facsimile number, and telephone number of the petitioner, if the petitioner is not represented by an attorney or a qualified representative; the name, address, and telephone number of the petitioner's representative, if any, which shall be the address for service purposes during the course of the proceeding; and an explanation of how the petitioner's substantial interests will be affected by the agency determination;
(c) A statement of when and how the petitioner received notice of the agency decision;
(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;
(e) A concise statement of the ultimate facts alleged, including the specific facts that the petitioner contends warrant reversal or modification of the agency's proposed action;
(f) A statement of the specific rules or statutes that the petitioner contends require reversal or modification of the agency's proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
(g) A statement of the relief sought by the petitioner, stating precisely the action that the petitioner wishes the agency to take with respect to the agency's proposed action.

The petition must be filed (received by the Clerk) in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@FloridaDEP.gov. Also, a copy of the petition shall be mailed to the addressee of this order at the address indicated above at the time of filing.

Time Period for Filing a Petition

In accordance with Rule 62-110.106(3), F.A.C., petitions for an administrative hearing by the addressee of this order must be filed within **21** days of receipt of this written notice. Petitions filed by any persons other than the addressee of this order must be filed within **21** days of publication of the notice or within **21** days of receipt of the written notice, whichever occurs first.

The failure to file a petition within the appropriate time period shall constitute a waiver of that person's right to request an administrative determination (hearing) under Sections 120.569 and 120.57, F.S., or to intervene in this proceeding and participate as a party to it. Any subsequent intervention (in a proceeding initiated by another party) will be only at the discretion of the presiding officer upon the filing of a motion in compliance with Rule 28-106.205, F.A.C. If you do not publish notice of this action, this waiver may not apply to persons who have not received a clear point of entry.

Extension of Time

Under Rule 62-110.106(4), F.A.C., a person whose substantial interests are affected by the Department's action may also request an extension of time to file a petition for an administrative hearing. The Department may, for good cause shown, grant the request for an extension of time. Requests for extension of time must be filed with the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@FloridaDEP.gov, before the deadline for filing a petition for an administrative hearing. A timely request for extension of time shall toll the running of the time period for filing a petition until the request is acted upon.

Mediation

Mediation is not available in this proceeding.

Judicial Review

Once this decision becomes final, any party to this action has the right to seek judicial review pursuant to Section 120.68, F.S., by filing a Notice of Appeal pursuant to Florida Rules of Appellate Procedure 9.110 and 9.190 with the Clerk of the Department in the Office of General Counsel (Station #35, 3900 Commonwealth Boulevard, Tallahassee, Florida 32399-3000) and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice must be filed within 30 days from the date this action is filed with the Clerk of the Department.

Questions

Any questions regarding DEP's review of your Conditional NFA Proposal should be directed to Robert Jake Gallman at 850-595-6700 extension 2056 or Robert.gallman@flhealth.gov. Questions regarding legal issues should be referred to DEP Office of General Counsel at 850-245-2242. Contact with any of the above does not constitute a petition for administrative hearing or request for an extension of time to file a petition for administrative hearing.

MEMORANDUM

FROM: **Natasha Lampkin, Program Administrator, Petroleum Restoration Program** Natasha Lampkin Digitally signed by Natasha Lampkin Date: 2022.05.17 14:32:36 -04'00'

SUBJECT: **Delegations of Authority**

DATE: **5/17/2022**

In accordance with DEP Directive 100, the following referenced delegation(s) are hereby delegated to the delegate(s) listed.

Delegation Reference	Delegate(s)
DEL-16 Permitting Authority: For their respective divisions, take agency action on all orders, certifications, agreements, permits, general permits, generic permits, exemptions, and exception applications, including modifications and extensions.	• Kenneth Busen, Environmental Administrator, Petroleum Restoration Program

Limitations to the delegation(s): Limited to the following Approvals for Petroleum Cleanup Sites: Site Rehabilitation Completion Orders, Conditional Site Rehabilitation Completion Orders, Low Scored Site Initiative No Further Action Orders, Underground Injection Control Approval Orders, Remedial Action Plan Approval Orders, Interim Source Removal Proposal Approval Order and Monitoring Plan Approvals only and does not include any other agreements, orders, certifications, permits, exemptions, exceptions, modifications or extensions.

The exercise of these delegations shall be consistent with all applicable rules, statutes, administrative directives, policies and procedures. These delegations should be exercised with a high degree of judgment and caution. If there is any doubt whether exercising this delegated authority is inconsistent with any of the above limitations, the person whom the authority is delegated shall not exercise the authority without first consulting Natasha Lampkin, Program Administrator, Petroleum Restoration Program.

This delegation of authority revokes, replaces, and supersedes all previous delegations within the Petroleum Restoration Program.

This delegation is temporary and will be in effect from June 1, 2022 through June 3, 2022 and June 7, 2022.

Exceedences are **BOLD**
U = the compound was analyzed for but not detected.
I = The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
L = Off-scale high. Actual value is known to be greater than the value given.
V = Indicates the analyte was detected in both the sample and method blank.

Site manager review of laboratory reports confirmed no SCTL exceedances for Petroleum Products' COC not listed in Table.

● Confirmed clean by SPLP and/or TRPH Fractionation

* = See Page 3 of Table 2 for confirmation sample. Also, TRPH was confirmed clean by TRPH Fractionation

DECLARATION OF RESTRICTIVE COVENANT

THIS DECLARATION OF RESTRICTIVE COVENANT (hereinafter "Declaration") is made this 10th day of January, 2022 by Baptist Hospital, Inc., a Florida Not for Profit Corporation (hereinafter "GRANTOR"), and the Florida Department of Environmental Protection (hereinafter "FDEP"). This Declaration is neither extinguished nor affected by the Marketable Record Title Act pursuant to section 712.03, Florida Statutes (F.S.)

RECITALS

A. GRANTOR is the fee simple owner of that certain real property situated in the County of Escambia, State of Florida, more particularly described in Exhibit "A" attached hereto and made a part hereof (the "Property"). The portion of the Property that is being restricted by this Declaration is more particularly described in Exhibit "B" attached hereto and made a part hereof (hereinafter the "Restricted Property").

B The FDEP Facility Identification Number is 178626031. The facility name at the time of this Declaration is Baptist Hospital, 1000 West Moreno Street, Pensacola, Escambia County, Florida. This Declaration addresses the discharge or contamination that was reported to the FDEP on October 19, 2009.

C. Petroleum staining was observed at the Restricted Property during closure of two 10,000 gallon underground storage tanks ("USTs"), which prompted submission of a Discharge Report Form on March 1, 2010, and closure in place of the USTs. Closure assessment activities revealed contaminated soil and pea gravel backfill, which was removed from the Restricted Property during the UST closure. Subsequent assessments revealed groundwater contamination that has been remediated through the operation of a groundwater extraction system beginning on October 18, 2012. The discharge of petroleum, UST closure, assessments, and remediation actions on the Restricted Property are documented in the following reports that are incorporated by reference:

1. Site Assessment Report dated March 24, 2010, submitted by Enviro Pro Tech;

2. Remedial Action Plan dated April 19, 2012, submitted by Enviro Pro Tech;

3. Supplemental Site Assessment Report dated January 13, 2016, submitted by Enviro Pro Tech;

4. Supplemental Site Assessment Report dated May 2, 2017, submitted by Enviro Pro Tech;

5. Confirmatory Soil Sampling & Analysis Letter Report dated April 25, 2019, submitted by Cameron-Cole, LLC;

6. Addendum to April 25, 2019 Confirmatory Soil Sampling & Analysis Letter Report dated June 25, 2019, submitted by Cameron-Cole, LLC.

D. The reports noted in Recital C set forth the nature and extent of the contamination that is located on the Restricted Property. These reports confirm that contaminated groundwater as defined by Chapter 62-780, Florida Administrative Code (F.A.C.), exists on the Restricted Property. Also, these reports document that the extent of the groundwater contamination does not extend beyond the Restricted Property boundary, that the extent of the groundwater contamination does not exceed 1/4 acre, and that the groundwater contamination is not migrating.

E. It is GRANTOR's and FDEP's intent that the restrictions in this Declaration reduce or eliminate the risk of exposure of users or occupants of the Restricted Property and the environment to the contaminants and to reduce or eliminate the threat of migration of the contaminants.

F. FDEP has agreed to issue a Conditional Site Rehabilitation Completion Order (hereinafter "Order") upon recordation of this Declaration. FDEP can unilaterally revoke the Order if the conditions of this Declaration or of the Order are not met. Additionally, if concentrations of petroleum products' chemicals of concern increase above the levels approved in the Order, or if a subsequent discharge occurs at the Restricted Property, FDEP may require site rehabilitation to reduce concentrations of contamination to the levels allowed by the applicable FDEP rules. The Order relating to FDEP Facility ID 178626031 can be found by contacting the Northwest FDEP district office.

G. GRANTOR deems it desirable and in the best interest of all present and future owners of the Restricted Property that an Order be obtained and that the Restricted Property be held subject to certain restrictions, all of which are more particularly hereinafter set forth.

NOW, THEREFORE, to induce FDEP to issue the Order and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged by each of the undersigned parties, GRANTOR agrees as follows:

1. The foregoing recitals are true and correct and are incorporated herein by reference.

2. GRANTOR hereby imposes on the Restricted Property the following restrictions:

a. Groundwater Use. There shall be no use of the groundwater under the Restricted Property. There shall be no drilling for water conducted on the Restricted

Property, nor shall any wells be installed on the Restricted Property other than monitoring or other wells pre-approved in writing by FDEP Division of Waste Management (DWM) in addition to any authorizations required by the FDEP Division of Water Resource Management (DWRM) and the applicable Water Management District (WMD).

b. Dewatering. For any dewatering activities on the Restricted Property, a plan signed and sealed by a Florida-registered professional engineer or Florida-registered professional geologist to address and ensure the appropriate handling, treatment and disposal of any extracted groundwater that may be contaminated must be submitted to FDEP's DWM. The plan must include the location(s) of the dewatering activity and the effluent disposal area(s) relative to known areas of groundwater contamination, proposed flow rates, duration, volume, estimated drawdown, (based upon design calculations), a technical evaluation demonstrating that the dewatering will not cause the migration of contamination and procedures for proper characterization, treatment and handling of any contaminated groundwater that may be encountered during dewatering. FDEP's DWM will keep the plan in the site file as documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The GRANTOR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. FDEP will rely on this Declaration, Rule 62-621.300, F.A.C., and the guidance incorporated therein, and the signed and sealed dewatering plan as the institutional controls to ensure that no exposure to contaminated groundwater resulting in risk to human health, public safety or the environment will occur due to dewatering activities on the contaminated site. Rule 62-621.300, F.A.C., requires a permit when conducting dewatering in the area of a contaminated site. For this reason, if GRANTOR seeks to conduct dewatering on the Restricted Property, GRANTOR shall submit the signed and sealed plan to FDEP DWM in addition to obtaining any authorizations that may be required by FDEP DWRM, the WMD, or other federal, state, or local laws and regulations that may apply to this activity. The dewatering plan must ensure the appropriate handling, treatment, and disposal of any extracted groundwater that may be contaminated to avoid adversely impacting or increasing the potential for exposure to contaminants resulting in risk to human health, public safety or the environment. Unless it is demonstrated that the cleanup criteria under subsection 62-780.680(1), F.A.C., have been achieved, FDEP, in addition to other remedies available at law, may institute proceedings to revoke this Declaration and the Conditional Site Rehabilitation Completion Order and require the resumption of site rehabilitation activities if any dewatering activities are commenced without submittal of a signed and sealed plan.

c. Stormwater Facilities. There shall be no stormwater swales, stormwater detection or retention facilities, or ditches on the Restricted Property. If stormwater features must be constructed, modified, altered or expanded, a plan signed and

sealed by a Florida-registered professional engineer or a Florida-registered professional geologist must be submitted to FDEP's DWM in addition to any authorizations required by the DWRM and the WMD. The plan must include the feature location, construction and design specifications relative to known areas of soil and groundwater contamination, and a technical evaluation (including calculations, fate and transport modeling, as applicable) to demonstrate that the new stormwater facilities will not cause the migration of contamination. The plan shall also outline the procedures for proper characterization, handling and disposal of any contaminated media that may be encountered during construction. FDEP's DWM will keep the plan in the site file as documentation of site conditions and will rely on this professional certification for demonstrating compliance with this restriction. The GRANTOR is advised that other federal, state, or local laws and regulations may apply to this activity. A copy of all permits obtained for the implementation of dewatering must be provided along with the plan submitted to FDEP's DWM. A revised exhibit must be amended to the Declaration and recorded when any stormwater feature is altered, modified, expanded, or constructed. FDEP will rely on this Declaration and certified plan to construct new or modify existing stormwater features to ensure that there is no exposure to contaminated groundwater entering into new or expanded stormwater features resulting in risk to human health, public safety or the environment due to the contaminated site. Construction of stormwater swales, stormwater detention or retention features, or ditches on the Restricted Property could destabilize the groundwater plume or increase potential for exposure to contaminants resulting in risk to human health, public safety, or the environment. For this reason, if GRANTOR seeks to construct stormwater features on the Restricted Property, GRANTOR shall submit the certified plan to FDEP DWM in addition to obtaining any authorizations that may be required by FDEP DWRM, the WMD, or other federal, state, or local laws and regulations that may apply to this activity. Unless it is demonstrated that the cleanup criteria under subsection 62-780.680(1), F.A.C., have been achieved, FDEP, in addition to other remedies available under law, may institute proceedings to revoke this Declaration and the Conditional Site Rehabilitation Completion Order, and require the resumption of site rehabilitation activities if any such stormwater features are constructed or commenced without submittal of a certified plan.

3. In the remaining paragraphs, all references to "GRANTOR" and "FDEP" shall also mean and refer to their respective successors and assigns.

4. For the purpose of monitoring the restrictions contained herein, FDEP is hereby granted a right of entry upon, over and through, and access to the Restricted Property at reasonable times and with reasonable notice to GRANTOR. Access to the Restricted Property is granted via providing access to the Property located at 1000 W. Moreno St., Pensacola, Florida 32501, and as defined in Exhibit A.

5. It is the intention of GRANTOR that this Declaration shall touch and concern the Restricted Property, run with the land and with the title to the Restricted Property, and shall

apply to and be binding upon and inure to the benefit of GRANTOR and FDEP, and to any and all parties hereafter having any right, title or interest in the Restricted Property or any part thereof. FDEP may enforce the terms and conditions of this Declaration by injunctive relief and other appropriate available legal remedies. Any forbearance on behalf of FDEP to exercise its right in the event of the failure of the GRANTOR to comply with the provisions of this Declaration shall not be deemed or construed to be a waiver of FDEP's rights hereunder. This Declaration shall continue in perpetuity, unless otherwise modified in writing by GRANTOR and FDEP as provided in paragraph 7 below. These restrictions may also be enforced in a court of competent jurisdiction by any other person, firm, corporation, or governmental agency that is substantially benefited by these restrictions. If the GRANTOR does not or will not be able to comply with any or all of the provisions of this Declaration, the GRANTOR shall notify FDEP in writing within three (3) calendar days. Additionally, GRANTOR shall notify FDEP thirty (30) days prior to any conveyance or sale, granting or transferring the Restricted Property or portion thereof, to any heirs, successors, assigns or grantees, including, without limitation, the conveyance of any security interest in said Restricted Property.

6. In order to ensure the perpetual nature of this Declaration, GRANTOR shall reference these restrictions in any subsequent lease or deed of conveyance, including the recording book and page of record of this Declaration. Furthermore, prior to the entry into a landlord-tenant relationship with respect to the Restricted Property, the GRANTOR agrees to notify in writing all proposed tenants of the Restricted Property of the existence and contents of this Declaration of Restrictive Covenant. Without limiting the generality of paragraph 3 above, it is the intention of the parties that if GRANTOR has conveyed the Restricted Property, the GRANTOR's successors and assigns shall be required to perform such notification.

7. This Declaration is binding until a release of covenant is executed by the FDEP Secretary (or designee) and is recorded in the public records of the county in which the land is located. To receive prior approval from the FDEP to remove any requirement herein, cleanup target levels established pursuant to Florida Statutes and FDEP rules must be achieved. This Declaration may be modified in writing only. Any subsequent amendments must be executed by both GRANTOR and FDEP and be recorded by GRANTOR as an amendment hereto.

8. If any provision of this Declaration is held to be invalid by any court of competent jurisdiction, the invalidity of that provision shall not affect the validity of any other provisions of the Declaration. All such other provisions shall continue unimpaired in full force and effect.

9. GRANTOR covenants and represents that on the date of execution of this Declaration that GRANTOR is seized of the Restricted Property in fee simple and has good right to create, establish, and impose this restrictive covenant on the use of the Property.

EXHIBIT "A"

Legal Description of the Property

Beginning at the northwest corner of Fractional Section twenty-seven (27), Township two (2) south, Range thirty (30) west, and run thence south on the west line of said Section a distance of six hundred sixty (660) feet, thence in an easterly direction seven hundred thirty-two (732) feet, thence northward five hundred thirty-eight (538) feet to the north line of the said Section, thence along said north line six hundred forty-two (642) feet to the point of beginning, containing nine (9) acres, more or less, all lying and being in said Section twenty-seven (27), excepting therefrom that portion of the above described parcel that lies west of an extension northward of the west line of "G" Street as shown on the plat of North Hill Highlands recorded in Deed Book 62 at page 244 of the records of said County.

And also all of said right, title, and interest in and to any portions of Blocks 58, 59, 60 and 61 of said North Hill Highlands.

AND ALSO

All that portion of fractional Section 27, Township 2 South, Range 30 West, lying North of the North line of Moreno Street and lying West of an extension Northward of the West line of "G" Street as shown on Plat of North Hill Highlands recorded in Deed Book 62, at Page 244 of the public records of Escambia County, Florida, except property conveyed to Raymond P. Brown by Deed dated May 14, 1927, and recorded in Deed Book 122, at Page 106, of the records of said County, which said excepted parcel is described as beginning at the intersection of the West line of said "G" Street with the North line of Moreno Street (formerly Madison Street) for point-of-beginning, and thence run West along the North line of Moreno Street 150 feet; thence North at the right angles 150 feet; thence East at right angles 150 feet to the West line of an extension Northward of the West line of said "G" Street; and thence run South along the West line of an extension Northward of the West line of the said "G" Street a distance of 150 feet to point-of-beginning.

Said parcels being one and the same as those described in Deed Book 420, at Page 133; Deed Book 254, Page 269, and Deed Book 227, Page 501, all of the public records of Escambia County, Florida.

EXHIBIT "B"

Legal Description and Survey of the Restricted Property

Commence at the Intersection of the north right of way line of Avery Street (55' R/W) and the east right of way line of "H" Street (50' R/W); thence South 85 degrees 43'24" East along said north right of way line for a distance of 224.15 feet; thence South 04 degrees 12'56" West for a distance of 88.97 feet for the point of beginning (Northing 530579.41, Easting 1107535.93, State Plane Coordinates referenced to N.A.D. 83 datum, 2011 adjustment, Florida North Zone).

Thence continue South 04 degrees 12'56" West for a distance of 200.00 feet (Northing 530379.95, Easting 1107521.23); thence South 85 degrees 47'04" East for a distance of 200.00 feet (Northing 530365.25, Easting 1107720.69); thence North 04 degrees 12'56" East for a distance of 200.00 feet (Northing 530564.71, Easting 1107735.39); thence North 85 degrees 47'04" West for a distance of 200.00 feet to the point of beginning.

All lying and being in Sections 18 & 27, Township 2 South, Range 30 West, Escambia County, Florida. Containing 0.92 acres, more or less.

SURVEYOR'S NOTES:

1. Subject to setbacks, easements and restrictions of record.
2. This sketch is subject to any facts that may be disclosed by a full and accurate title search. No title work performed by this firm.
3. This sketch does not reflect or determine ownership.
4. This property may be subject to setback lines mandated by zoning ordinances and/or restrictive covenants of record.
5. Sub-surface improvements, if any, not located.
6. The underground utilities shown have been located from field survey information and existing drawings. The surveyor has not physically located the underground utilities. The surveyor does not certify that the underground utilities shown comprise all such utilities or that they are the exact size, material, or location as indicated.
7. Coordinates shown are State Plane Coordinates referenced to N.A.D. 83 datum, 2011 adjustment, Florida North Zone and expressed in U.S. survey feet.
8. Coordinates are derived by using the Trimble and Florida Department of Transportation continuously operating reference station (CORS) network.
9. NOT A BOUNDARY SURVEY.

Discharge Report Form

PLEASE PRINT OR TYPE

DEP Form # 62-761.900(1)
Form Title Discharge Report Form
Effective Date: July 13, 1998

Instructions are on the reverse side. Please complete all **applicable** blanks

RECEIVED
OCT 19 2009
ENVIRONMENTAL HEALTH DIVISION

1. Facility ID Number (if registered): 8626031 **2. Date of form completion:** 10/19/09

3. General information
Facility name or responsible party (if applicable): Baptist Hospital Inc.
Facility Owner or Operator, or Discharger: Baptist Hospital Inc.
Contact Person: Earl Polk Telephone Number: (850) 434-4853 County: Escambia
Facility or Discharger Mailing Address: 1000 W. Moreno St., Pensacola, FL
Location of Discharge (street address): 1000 W. Moreno St., Pensacola, FL
Latitude and Longitude of Discharge (if known)

4. Date of receipt of test results or discovery of confirmed discharge: 10/19/09 month/day/year

5. Estimated number of gallons discharged: 25-100 gallons

6. Discharge affected: [ ] Air [X] Soil [X] Groundwater [ ] Drinking water well(s) [ ] Shoreline [ ] Surface water (water body name)

7. Method of discovery (check all that apply)
[ ] Liquid detector (automatic or manual)
[ ] Vapor detector (automatic or manual)
[ ] Tightness test
[ ] Pressure test
[ ] Statistical Inventory Reconciliation
[ ] Internal inspection
[ ] Inventory control
[ ] Monitoring wells
[ ] Automatic tank gauging
[ ] Manual tank gauging
[X] Closure/Closure Assessment
[ ] Groundwater analytical samples
[ ] Soil analytical tests or samples
[ ] Visual observation
[ ] Other

8. Type of regulated substance discharged: (check one)
[ ] Unknown [ ] Used/waste oil [ ] Jet fuel [ ] Heating oil [ ] New/lube oil
[ ] Gasoline [ ] Aviation gas [X] Diesel [ ] Kerosene [ ] Mineral acid
[ ] Hazardous substance - includes CERCLA substances from USTs above reportable quantities, pesticides, ammonia, chlorine, and derivatives (write in name or Chemical Abstract Service (CAS) number)
[ ] Other

9. Source of Discharge: (check all that apply)
[ ] Dispensing system [ ] Pipe [ ] Barge [ ] Pipeline [ ] Vehicle
[X] Tank [ ] Fitting [ ] Tanker ship [ ] Railroad tankcar [ ] Airplane
[ ] Unknown [ ] Valve failure [ ] Other Vessel [ ] Tank truck [ ] Drum
[ ] Other

10. Cause of the discharge: (check all that apply)
[ ] Loose connection [ ] Puncture [ ] Spill [ ] Collision [ ] Corrosion
[ ] Fire/explosion [ ] Overfill [ ] Human error [ ] Vehicle Accident [ ] Installation failure
[ ] Other UnKnown

11. Actions taken in response to the discharge: Source removal

12. Comments: Staining on fuel tube and the return containment sump

13. Agencies notified (as applicable):
[ ] State Warning Point 1-800 320-0519
[ ] National Response Center 1-800-424-8802
[ ] Florida Marine Patrol (800) 342-5367
[ ] Fire Department.
[ ] DEP (district/person)

1.0 GENERAL INFORMATION AND INTRODUCTION

Site Name:	**Baptist Hospital**
FDEP Facility ID Number:	178626031
Site Location:	1000 West Moreno Street, Pensacola, Florida
Site Description:	Remediation of petroleum impacted soil and groundwater is performed via a pump and dispose system. The system consists of two (2) 4-inch x 8-feet, groundwater extraction wells. All figures and tables are in **Appendix A** and **Appendix B**, respectively.
Original System Start Date:	December 13, 2013
Contaminant Group:	Groundwater analyzed for VOAs/VOHs, PAHs and TRPH.

The remediation of petroleum impacted soil and groundwater at the Baptist Hospital site is being performed by Enviro-Pro-Tech, Inc. (EPT). A groundwater extraction system with the disposal of groundwater to the sanitary sewer was the method chosen for the remediation of contaminants identified at the site. The goal of this remediation action is to reduce petroleum contaminant concentrations in the groundwater to levels specified under Chapter 62-770, Florida Administrative Code (FAC). This report summarizes remedial system activities of operation, maintenance, monitoring, and sampling. All field sampling and testing were performed as per the Florida Department of Environmental Protection's (FDEP) Standard Operating Procedure (SOP) dated July 2012. Associated figures are located in **Appendix A**. The report tables are located in **Appendix B**.

1.1 Site History

The Baptist Hospital "site" (former underground storage tank [UST] location/Energy Center) is between E and H Streets in Pensacola, Escambia County, Florida. Specifically, the site is located at latitude 30 deg 25 min 49.45 sec North/ longitude 87 deg 13 min 54.18 sec west, and is referenced by the State of Florida as facility ID#17/8626031. The area surrounding the site consists of an unoccupied fuel pump building adjacent to a recently constructed 20,000 gallon

above ground storage tank (AST) placed on a concrete slab. Other buildings near the site are a purchasing warehouse located west of the site and the energy center located south of the site.

The previous petroleum storage system consisted of two (2) 10,000-gallon, single-wall, fiberglass UST's. According to the FDEP Bureau of Petroleum Storage Systems data base, the tanks were installed in July 1976. The storage tank systems were previously used to fuel multiple standby electrical generators and a fire pump. Off-road (dyed) diesel fuel stored in the UST's was conveyed through aboveground steel piping to the adjoining cement block pump house before being transferred aboveground to the standby generator(s) and fire pump. The fuel return lines to the tanks were also placed aboveground. The UST's were outfitted with spill containment vessels and return and supply line piping sumps. The tanks were buried end-to-end in a north-south direction and were surrounded by a 2 to 3-foot thick layer of pea gravel. The tanks were located between and in close proximity to a cement block building and pad-mounted electrical transformers vital to the electrical supply to the hospital.

Petroleum staining observed on the northern UST's fill tube and the return containment sump during the closure/closure assessment prompted development of a Discharge Report Form (DRF). On October 19, 2009 the DRF was provided to the FDEP with an estimated number of gallons reported between 25 and 100 gallons. The affected media was listed as soil and groundwater with a regulated substance recorded as diesel fuel. The source of the discharge was the UST with the cause of the release as unknown. Action taken in response to the discharge was source removal activities.

On October 15, 2009, EPT, commenced closure assessment activities at the Baptist Hospital, Inc., petroleum storage tank facility (Energy Center). The closure assessment sampling and analyses are required to be conducted in accordance with the FDEP's printed "Storage Tank System Closure Assessment Requirements" per Section 62-761.800 (4) (c), F.A.C.

Due to the proximity of the tanks to the pump house building and other structures, the tanks were closed in-place by removing ends on the top section of the tank and filling the void with a white

fine to medium grained dry clean sand. Soil/pea gravel headspace vapor concentrations measured at the tank's fill port located near the middle of the tank ranged from 2,750 parts per million (ppm) to 4,601 ppm from near land surface to the top of the tank. A reading of 50 ppm is considered excessive for soil contacted by diesel fuel. Stained and excessively contaminated soil/pea gravel was also found next to the fuel return sump at the tank's south end. Soil/pea gravel exhibiting petroleum-like odor and/or excessive vapor concentrations were segregated from the other excavated soil and placed on plastic sheeting for later transport offsite during the UST closure. A soil screening summary from soil borings and stockpiled soils performed during the UST closure are provided in **Table 1**.

The pea gravel backfill was found to be saturated with red dyed diesel fuel and water at approximately 6 to 7-feet below land surface. Product saturated gravel was present on both the east and west sides of the UST. Soil borings placed 5 to 10-feet away from the tank pit revealed that a perching unit of dry, iron-rich, silty-sand existed at approximately 7-feet bls. The brown and tan silty sandy soil just above the unit was saturated with water. The headspace vapor concentrations measured in the saturated soil resting on the perching unit north and east of the UST were less than 1 ppm, and, similar soil collected a short distance west of the tank exhibited corrected vapor levels of 2,910 ppm and 3,436 ppm and emitted weathered diesel-like odors. A 6-inch layer of dyed diesel product was present in a shallow compliance well located outside the southwest corner of the tank pit. Product was not observed in a sample of the saturated soil collected adjacent to the well. Further tank removal work was terminated until provisions were made for the removal and disposal of the water and product within the tank pit.

A sample of the obviously contaminated soil was collected to confirm whether the material was a hazardous or special waste (for disposal purposes), and, to determine if the soil contained contaminants of concern above State standards. The soil was found to be a special waste and was subsequently accepted for disposal in Escambia County's Perdido Landfill. The same soil was also found to contain one or more volatile and semi-volatile organic compounds and total recoverable petroleum hydrocarbons in concentrations that exceeded the State's cleanup target levels, as reported in Chapter 62-777, Florida Administrative Code. That same day, four (4) 2-

inch diameter well points were driven to the bottom of the pea gravel backfill on the east and west sides of the North Tank. A vacuum truck operated by Aaron Oil Company, Mobile, Alabama was commissioned to evacuate water and product from the tank pit through the well points. Approximately 1,724-gallons of liquid were removed, dropping the liquid level in the tank pit to between 9 and 10-feet bls.

Excavation activities resumed the next day. Soil samples from the sidewalls of the tank pit at 8 to 10-feet bls exhibited a strong diesel-like odor and produced an iridescent sheen when placed in water. The northern half of the North tank was severed from the mostly unearthed southern half and removed for offsite disposal. Water and product subsequently filled the bottom foot of open tank remaining in the ground. A vacuum truck belonging to SWS First Response was commissioned to evacuate the liquid accumulating in the tank. The tank's bottom and sidewalls were perforated with 0.5-inch holes 6-inches to a foot above the bottom of the tank to allow product and water to move efficiently into the tank. Approximately 1,800-gallons of liquid were removed that night and an additional 185-gallons the following morning of liquid were pumped from the UST into a skid tank before the tank filling activities began. It was decided that further excavation activities would jeopardize the structural integrity of near-by structures vital to the hospital's operations and that the Subject USTs would be filled in-place and not removed. The remaining portion of the North Tank and the entire South Tank were filled with white, well sorted medium sand to 1-foot above the tops of the tanks to facilitate future remediation efforts. A layer of black polyethylene sheeting was placed between the white sand and the overlying brown loamy sand backfill material. The backfilled and compacted areas of disturbed ground overlying and in the vicinity of the tanks were covered with sod mats. Approximately 91-tons of excavated soil and pea gravel were transported offsite for disposal in the County's lined Class I sanitary landfill.

1.2 Groundwater Quality Assessment Activities

Comprehensive site assessment activities were documented in the Site Assessment Report, dated March 2010. The SAR received final regulatory approval December 16, 2010 and authorized preparation of a RAP.

Following submittal of the SAR, a permit was obtained from the ECUA to discharge tank pit water intermittently into the sanitary sewer system. The tank pit was de-watered through two (2) 4-inch diameter recovery wells installed in the tank pit and treated through an oil-water separator before being discharged to a sewer clean-out associated with a near-by building. At least one (1) month after each pump and dispose event, the recovery wells were purged and sampled for BETX+MTBE, PAHs, and Fl-Pro. Eight (8) pump and dispose events have occurred since April 2010. Approximately 44,815-gallons of treated water were disposed into the ECUA's sanitary sewer system. Additional free-product was not recovered during the tank pit de-watering process. The contaminant concentrations measured at Recovery Well (RW) 1, placed in the sand and gravel backfill at the north end of the tank pit have steadily decreased following each pump and dispose event. The contaminant concentrations at RW-2, screened within and below the southern UST, steadily decreased after each pumping event until February 2011, when the total xylenes and ethyl benzene concentrations rebounded to levels that exceed their initial concentrations measured in May 2010. In June 2011, after the seventh (7th) pump and dispose event, while sampling the four (4) surficial aquifer wells (DWR) approximately 1-foot of dyed diesel product was discovered in DWR-3 located at the south end of the tank pit. A water sample for laboratory analysis was not collected from DWR-3, but, the water samples from the other three (3) wells were found to be clean. Approximately 0.01-foot (heavy sheen) of diesel product was also found in shallow well MW-1, also located at the south end of the tank pit. Free-product recovery commenced soon afterwards with bailing and then sorption in both DWR-3 and MW-1. Free-product recovery ended on November 14, 2011 when product was no longer observed in either well. Less than 0.5-gallon of product is estimated to have been recovered.

In August and November, 2011, eight (8) additional shallow wells, MW-5 through MW-13, were installed less than 0.5-feet into the perching layer. An additional deep well, DW-5, was installed hydraulically down gradient from DWR-3. The newly installed wells, MW-5 through MW-10, were repeatedly checked for free-product with none being observed. Well MW-5 was placed less than 2-feet away from DWR-3. A deep boring was also drilled adjacent to DWR-3 and completed to 45-feet bls. Significant evidence of contamination was not encountered below the

bottom of the silty-clayey perching unit at 15-feet bls and the water table at 38-feet bls. Following the installation of wells MW-11 through MW-13 in November, all of the shallow wells, including MW-1, were found to be dry due to lack of rainfall.

1.3 Soil Quality Assessment

On October 15, 2009, EPT started a soil investigation associated with UST closure assessment activity. The supplemental soil assessment activities (post UST removal) was to confirm petroleum impact to the environment and to determine the continuity of the perching unit at least to the lateral extent of the obviously contaminated saturated soil resting on the unit, as determined during the UST closure. Post UST closure soil borings were conducted on October 21, 2009 and continued intermittently through November 4, 2009. A total of 25 soil borings were advanced during the mentioned time period. **Table 1** provides soil screening summary and for the borings completed during the investigation (UST closure and post closure assessment).

A comparison of the headspace vapor concentration to the laboratory results for the volatile organic contaminants (VOCs) in the soil suggests that a headspace reading of less than 280 ppm is indicative of "clean" soil with respect to the VOCs (see B-17 and B-19 **Table 2, Quality Summary Table).** Total Xylenes appears to be the predominant contaminant of concern in all of the samples exhibiting contaminant levels above the State's CTLs. The SPLP BTEX+MTBE results on two (2) silty-clayey sand samples exhibiting low and medium total xylenes concentrations suggest that such soil would not present a potential groundwater threat until the total xylenes concentration in the samples exceeded 1.5 to 1.7 mg/kg. Based on the soil headspace and total xylenes concentrations in three (3) silty-clayey sands and one (1) fine to medium sand, a headspace vapor reading of 280 ppm would be indicative of a VOC concentration that might exceed the State's default leachability limits for groundwater protection. The SPLP analytical summary is located on **Table 3**.

Below the perching layer, the corrected headspace vapor concentrations ranged from less than 1 ppm to 1,330 ppm. All of these readings were collected outside the tank pit. The highest reading above the perching unit was obtained at borehole B-10, located at the south end of the

tank pit near the Energy Center building. The area of contaminated soil in the shallow zone extends under this building. The shallow zone soil contamination extends under the eastern 5-feet of the paved parking lot located west of the tank pit, and probably under the cement block fuel pumping building at the eastern edge of tank pit. The highest reading below the perching unit was encountered at borehole B-17 at the western edge of the north end of the tank pit. The perching unit over most of the site appears to be approximately 8-feet thick extending to approximately 15-feet bls. The perching layer is 2-feet or less in thickness within the tank pit. It is thought that the rain or groundwater that had accumulated within the tank pit prior to the fuel release acted as a hydraulic barrier to vertical fuel migration in addition to the concrete slab placed below the tanks. The vapor concentrations measured in the soil below the perching unit are the result of relatively low levels of water-soluble fuel constituents migrating vertically with groundwater flow through the unit. **Figure 1** illustrates monitor well locations. **Figure 2** illustrates the system piping layout and treatment well points.

A Remedial Action Plan was prepared and submitted on October 18, 2012. In response to comments from the State of Florida's Department of Environmental Protection supplemental information was submitted on December 10, 2012. The FDEP issued a Remedial Action Plan Approval Order on March 11, 2013 for the site.

2.0 SYSTEM DESIGN

The groundwater and smear zone contamination is being treated by allowing the natural rainfall to enter the contaminated area and recovering it through down gradient recovery wells. This allows it to follow the path that the diesel fuel spill did penetrating the contaminated soil surrounding the tank pit and releasing the adsorbed diesel so that it can be recovered by the down gradient recovery wells. Once recovered, the groundwater is disposed of through the sanitary sewer system under the current agreement with ECUA.

The hydrocarbons are exposed to further degradation process through natural processes of bacteria and enzymes that are present in the soil that use the petroleum as a food source. These processes are aided by the oxygen that is introduced into the subsurface by the water. These processes may be sped up or assisted by introducing additional water through existing recovery wells RW-1 and RW-2 or even by adding additional nutrients to allow the bacteria and enzyme to thrive.

Two (2) recovery wells were installed to treat the current contamination. Each well was designed to recover groundwater at a rate of 0.10 gpm. The 4-inch PVC wells are screened from 2-feet to 8-feet bls. Jet pumps are placed in each well to provide the extraction. **Figure 2** illustrates the location of the extraction wells.

The system uses a pre-constructed Skid mounted system including a control panel, recovery manifold, a surge tank, and a transfer pump. The surge tank also functions as an oil-water separator by feeding in from the top and emptying from the bottom. It is not anticipated that any product still remains however the surge tank is checked for product during O&M visits. The recovered ground water passes through the surge tank before being pumped into the sanitary sewer. The surge tank is equipped with a high level switch that disables the pumps until the water is disposed. The water is pumped to the sanitary sewer system owned by Emerald Coast Utility Authority by their permission. The tank is connected to the sanitary sewer and pumps out automatically from the bottom of the tank and turns off with approximately 200 gallons in the tank to provide ample water for the jet pumps and also to ensure no floating product could be

pumped to the ECUA system. The system operates automatically 24-hours per day, 7-days per week.

3.0 REMEDIATION AND SYSTEM OPERATION AND MAINTENANCE

3.1 System Maintenance and Site Visit Data

The following maintenance is normally performed for the remedial system as needed:

- Inspect, record, and adjust system pressures.
- Inspect and repair system mechanical and electrical components as needed.
- Inspect system piping for cracks and leaks.
- Record system operating parameters.
- Collection of required quarterly samples.
- Measurement of groundwater levels at select locations.
- Conduct maintenance and minor equipment repairs as needed.

The following is a chronology of events from July 17, 2014 through September 9, 2014. For any information prior to the above-mentioned dates, please refer to the Start Up Report prepared by EPT.

7/21/14 EPT personnel mobilized to the site for an O&M site visit. The system was on upon arrival and departure from the site. Depth to water was measured in onsite monitor wells and system readings were recorded.

8/18/14 EPT personnel mobilized to the site for an O&M site visit. The system was on upon arrival and departure from the site. Depth to water was measured in onsite monitor wells and system readings were recorded.

9/18/14 EPT personnel mobilized to the site for an O&M site visit. The system was on upon arrival and departure from the site. Depth to water was measured in onsite monitor wells and system readings were recorded. Groundwater samples were collected from MW-5, DW-3R, DW-4R, and DW-5. MW-6 abandoned while MW-7, and MW-8 did not contain enough water to collect a sample. An effluent sample was collected for lab analysis.

3.2 Operational Difficulties

No operational difficulties were noted this quarter.

3.3 System Performance

There were a total of ninety-seven (97) possible runtime days during this quarter of operation, between the dates of June 13, 2014 and September 18, 2014. The system operated 100% of the time. Please see **Table 4** for a summary of system performance data.

4.0 SYSTEM SAMPLING AND ANALYSIS

A system effluent water samples were collected on 9/18/14. The water samples were analyzed for BTEX + MTBE (EPA Method 8260), PAHs (EPA Method 8270), and TRPH (FL-PRO Method). All parameters were below detection limits. Copies of the laboratory analytical results are provided in **Appendix C** and summarized on **Table 5.**

5.0 GROUNDWATER SAMPLING AND ANALYSIS

5.1 Field Techniques

Field techniques employed during this investigation were performed in accordance with FDEP SOP for groundwater sampling, FS 2200. Pace Analytical Services, Inc., performed analytical laboratory analyses and laboratory procedures were performed in accordance with the National Environmental Laboratory Accreditation Program (NELAP) FL NELAP #E83079.

5.2 Groundwater Quality Summary Sampling

On September 18, 2014 groundwater samples were collected from monitor wells MW-5, DW-3R, DW-4R, and DW-5. All groundwater samples were analyzed for BTEX + MTBE via EPA Method 8260, PAH via EPA Method 8270, and TRPH via FL-PRO Method. Monitor well MW-6 has been abandoned while MW-7 and MW-8 could not be sampled because they did not contain enough water to fill the sample containers and did not recharge. MW-5 exhibited concentrations of contaminants above the FDEP Groundwater Cleanup Target Levels (GCTLs) for contaminants of concern. Ethylbenzene was detected at a concentration of 59.2 µg/L (GCTL, 30 µg/L), and naphthalene was detected at a concentration of 44.0 µg/L (GCTL, 14 µg/L). 1- and 2-methylnaphthalene were detected at 28.3 µg/L (GCTL, 28 µg/L) and 32.6 µg/L (GCTL, 28 µg/L), respectively. No other parameters exceeded in any of the monitor wells sampled. Please refer to **Table 6** for a tabular summary of the groundwater analytical results. The analytical results for the monitor wells and intermediate wells are illustrated on **Figure 3**. The groundwater laboratory analytical reports, chain of custody, and field sampling logs are provided in **Appendix C.**

5.3 Groundwater Flow Direction

During the quarterly groundwater-sampling event, water table elevation measurements were collected on September 18, 2014. In the perched zone groundwater elevations ranged from 93.40-feet above national geodetic vertical datum (NGVD) in MW-1 to 92.14-feet above NGVD in MW-5. The groundwater flow was to the northwest at a hydraulic gradient of 0.14 ft/ft as calculated between MW-1 and an inferred point between MW-8 and MW-5. These groundwater elevations and flow may reflect the effects of pumping from the extraction wells. **Figure 4**

illustrates the perched groundwater flow direction for September 18, 2014. A summary of the groundwater elevations is located on **Table 7.** In the water table zone groundwater elevations ranged from 68.91-feet above national geodetic vertical datum (NGVD) in DW-5 and DW-3R to 69.00-feet above NGVD in DW-4R. The depth to groundwater at the water table has decreased an average of 1.7-feet across the site since the June 2014 sampling event. The groundwater flow was determined to be in a southeasterly direction. The hydraulic gradient was calculated at 0.002 ft/ft using monitor wells DW-4R and DW-3R. **Figure 5** illustrates the water table groundwater flow direction for June 12, 2014.

6.0 PERFORMANCE VERSUS MILESTONES

6.1 Goals

The target cleanup goal for this site under the Remedial Action phase is to achieve contaminant concentrations below the State GCTLs, as specified in Chapter 62-777, FAC, for a decision to be made as to continue active remediation or natural attenuation monitoring (NAM). The specific cleanup time frame for this goal has been set at 1.0-years as reported in the Remedial Action Plan submitted by EPT in October 2012, from the date the system was started in December 2013.

6.2 Milestone Objectives and Reductions

The designated milestone wells for establishing performance versus milestones calculations are MW-5, MW-8, and DW-4R. The petroleum products contaminants of concern (COC) selected for establishing contaminant concentration reductions are benzene, a sum of toluene, ethylbenzene, and total xylenes (TEX), and sum of naphthalenes. During the baseline groundwater-sampling event conducted in July 2013, concentrations of contaminants were exhibited above the GCTLs in key wells MW-5 and MW-8. Milestone objectives for all COC have been achieved for monitor wells MW-8 and DW-4R.

6.3 Milestone Summary

- Monitor well MW-8 could not be sampled this quarter because of lack of water in the monitor well.
- Monitor well DW-4R has achieved 100% reduction toward the remediation target goal for all COC and maintained it since the quarterly sampling event on March 31, 2014.
- MW-5 exceeded GCTLs for ethylbenzene, naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene concentrations from the sampling event on September 18, 2014.

Please refer to **Appendix D** for performance versus milestones linear models.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

- There were a total of ninety-seven (97) possible runtime days during this quarter of operation, between the dates of June 13, 2014 and September 18, 2014. The system operated 100% of the time.
- Monitor well MW-5 exhibited concentrations of contaminants above the FDEP Groundwater Cleanup Target Levels (GCTLs) for contaminants of concern.
- Three monitor wells scheduled to be sampled this quarter could not be due to one being abandoned because of upcoming construction and two had a lack of water in the monitor wells.
- Monitor well DW-4R continues to maintain 100% reduction toward the remediation target goal for all COC from the quarterly sampling event on September 18, 2014. Key well MW-8 could not be sampled this quarter due to lack of sufficient water in the monitor well.

7.2 Recommendations

EPT recommends shutting down the system during the construction and until more rainfall increases the perched water at the site. The quarterly monitoring of the groundwater at the site should continue.

RE: Project: Baptist Hospital 3A
Pace Project No.: 35155763

Dear Mr. Keethler:
Enclosed are the analytical results for sample(s) received by the laboratory on September 19, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Sakina Mckenzie
sakina.mckenzie@pacelabs.com
Project Manager

QUALIFIERS

Project: Baptist Hospital 3A
Pace Project No.: 35155763

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine(8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
V	Indicates that the analyte was detected in both the sample and the associated method blank.

Pace Analytical	Document Name: Sample Condition Upon Receipt Form	Document Revised: August 11, 2014
	Document No: F-FL-C-007 rev. 06	Issuing Authority: Pace Florida Quality Office

Sample Condition Upon Receipt Form (SCUR) Table Number:_____

Client Name: EPT Project #: 35155763

Color: ☑ Fed Ex ☐ UPS ☐ USPS ☐ Client ☐ Commercial ☐ Pace ☐ Other_____

Tracking #: 876841677911

Custody Seal on Cooler/Box Present: ☑ yes ☐ no Seals intact: ☑ yes ☐ no

Date and Initials of person examining contents: 9/19/14 BS 1115

Packing Material: ☐ Bubble Wrap ☑ Bubble Bags ☐ None ☐ Other_____

Thermometer Used: T85 Type of Ice: Wet Blue None

Cooler Temperature °C: 2.2 (Visual) 0 (Correction Factor) 2.2 (Actual)

(Temp should be above freezing to 6°C) If below 0°C, were samples frozen? ☐ Yes ☐ No

Receipt of samples satisfactory: ☐ Yes ☐ No

Rush TAT requested on COC:

If yes, then all conditions below were met:	If no, then mark box & describe issue (use comments area if necessary):
Chain of Custody Present	☐
Chain of Custody Filled Out	☐
Requished Signature & Sampler Name COC	☐
Samples Arrived within Hold Time	☐
Sufficient Volume	☐
Correct Containers Used	☐
Containers Intact	☐
Sample Labels match COC (sample IDs & date/time of collection)	☐ No Labels: ☐ No Time/Date on Labels: ☐
All containers needing preservation are found to be in compliance with EPA recommendation.	☐
Headspace in VOA Vials (>6mm):	☐

Field Notes

ENVIRO PRO TECH

Site and Location: Baptist Hospital, 1000 Moreno, Pensacola, Escambia County

Site Point of Contact: Mike Viola

Work Order: Private **Scheduled Work Date:** 8/18/2014

Project Number: EPT-Baptist **Task Code:** P10 **Event:** 3

Project Team: Mike Keethler

(Notify Chris and Pattie if this event date is changed for any reason)

Scope of Work

Conduct Month #8 Site Visit, Sampling and O&M

Collect System Totalyzer Reading and Recirculation Tank Level Reading

Collect DTW of RW-3 (West RW) and RW-4 (East RW)

Collect DTW of MW-1, MW-2, MW-5, MW-7, MW-8

Inspect treatment system and piping for proper operation and leaks

Samples Required: None

Sample Parameters: None

Special Sampling Requirements: Check with P.M. prior to sampling

- **Prior to event, review field notes and O&M inspection reports for any preexisting discrepancies of modified site conditions. Consult Project Team for any special instructions or system manipulations required prior to event.**
- **Contact Project Team upon arrival and departure at site. Consult Project Team if tasks required to complete the Scope of Work will exceed 4 hours on site.**
- **Complete event field notes and O&M checklist prior to departure from site. Make 2 copies of the completed field notes and O&M checklist, one for the project file and one for Chris to review and forward to the Project Team.**

M. Keethler

9-1-14 Pensacola Concrete Construction

0800 Load and mobilize for groundwater sampling event. Using 2004 Chevrolet HD2500 VIN # 1GBHC24U5YE311987, loaded and checked equipment and vehicle.

0950 Arrive onsite. WX conditions clear and hot 89°F

1000 open MW-1, MW-2, MW-3, MW-5 MW-18, and DW-1 to check water levels.

MW-5	41.62
MW-18	44.66
MW-1	42.33
DW-1	46.56
MW-2	42.12
MW-3	41.84

1010 Begin to sample MW-5. Submersible pump would not pump MW-5. Pump was running above ground but failed to pump water. Repeatedly raised and checked pump but failed when lowered

1200 Aborted sampling because of pump failure. Will return to office for another pump and try another day.

NFETP

M. Keethler
CH2M HILL

814 Baptist Hospital

900 Arrive onsite for monthly O&M and groundwater sampling.

915 Water levels

Well ID#	DTW
MW-1	7.20'
MW-8	7.13'
MW-7	Dry
MW-5	7.54'
DW-3R	30.48'
DW-5	30.24'
DW-4R	30.00'

1120 Collected System Effluent Sample
Tank 240 gallon
Recirc pressure 32 psi
Pump pressure 30 psi
Totalizer 4070709

1145 Collected Sample from MW-5. Collected BTEX and PAH and 1 set of parameters then well purged dry.

1155 Tried to Sample MW-8 but could not even get 1 50-ml vial from it. MW-7 and MW-8 not sampled because they were dry.

1256 DW-3R sampled submerged screen put tubing at 42.5' and used equipment volumes.

Site and Location: Baptist Hospital, 1000 Moreno, Pensacola, Escambia County

Site Point of Contact: Mike Viola

Work Order: Private **Scheduled Work Date:** 9/15/2014

Project Number: EPT-Baptist **Task Code:** P10 **Event:** 3

Project Team: Mike Keethler

(Notify Chris and Pattie if this event date is changed for any reason)

Scope of Work

Conduct Quarterly #3 GW sampling

Document DTW in RW-3 and RW-4

Shutdown OWS for duration of sampling event, restart upon completion

Samples Required: MW-5, ~~6~~, 7, 8, DW-3R, 4R, 5, System Effluent Water

Sample Parameters: 8021B BTEX+MTBE, 8270C PAHs, FL-PRO TRPH

Special Sampling Requirements:

- **Prior to event, review field notes and O&M inspection reports for any preexisting discrepancies of modified site conditions. Consult Project Team for any special instructions or system manipulations required prior to event.**
- **Contact Project Team upon arrival and departure at site. Consult Project Team if tasks required to complete the Scope of Work will exceed 4 hours on site.**
- **Complete event field notes and O&M checklist prior to departure from site. Make 2 copies of the completed field notes and O&M checklist, one for the project file and one for Chris to review and forward to the Project Team.**

(90)

M. Keethler

9-18-14 Baptist Hospital pg 2 C. East

13:32 Sample DW-5. Sampled as a submerged screen using equipment volumes.

14:09 Sample DW-4R. Sampled as a submerged screen using equipment volumes.

14:20 Post sampling equipment calibration checks.

14:30 leave site.

NFETP Mike Keethler

C. East

(91)

9-19-14 Rollings Hills Mckeethler

12:00 Arrive onsite. CLR & Sunny 85°F beyin openning G.W. wells to stabilize for groundwater elevation readings.

1230 stuck on access road, attempt free.

13:10 Pulled out by Rolling Hills staff with a bulldozer.

13:16

MW-1R	34.61	
MW-4	34.54	
MW-5R	23.45	23.45
MW-2	9.41	
MW-3R	8.90	
MW-6	12.44	

14:16 Take last water level, hiking out.

14:32 Back at Van.

14:45 Leave site.

NFETP Mike Keethler

Baptist Hospital M. Keethler

7/21/14 wx 80° Cloudy Humid

0740 Arrive onsite. System on and running.

0759 Totalizer 4070699.2

0800 Remove Caps from monitor wells so wells to stabilize

0810

monitor well	DTW
RW-3	7.45
RW-4	6.82
mw-1	6.66
mw-2	6.24
mw-5	6.60
mw-7	Dry
mw-8	6.23
MW-6	7.00

0830 Secure System. System on.

0900 Meeting onsite with FDEP, Baptist, Construction contractor. Lori Webster and Craig Berry were in attendance. Mikkel Fawzy, Miller Caldwell from Caldwell and associates. Everett Jones from HPlex Solutions. Discussed location of new construction and where the ground would be disturbed. We discussed that EPT would

7/21/14 Baptist Hospital pg 2

conduct DPT boorings before the construction trenching to determine if soil needed to be removed ahead of time. Monitor wells near construction would be sampled and then abandoned if possible. I would prepare a cost proposal for work asap.

1000 End of meeting. Left site.

Mr. Robert Jake Gallman
Florida Department of Health in Escambia County
Petroleum Cleanup Program
1300 West Gregory Street
Pensacola, FL 32502

RE: **Supplemental Site Assessment (SSA) Report**
Baptist Hospital
1000 West Moreno Street
Pensacola, Escambia County
FDEP Facility ID #17/8626031

Mr. Gallman:

Enviro Pro Tech, Inc. (EPT) is pleased to provide our services to the Florida Department of Health (FDOH) in Escambia County under the Florida Department of Environmental Protection (FDEP) Petroleum Restoration Program. EPT is submitting this SSA Report summarizing activities performed at the Baptist Hospital site, Pensacola, Escambia County, Florida on behalf of the property owner, Baptist Hospital.

Scope of Services
The scope of services performed included the installation of three soil borings and the collection of three soil samples for laboratory analysis and the preparation and submittal of this SSA Report.

Site History
The Baptist Hospital site (former underground storage tank [UST] location/Energy Center) is between E and H Streets in Pensacola, Escambia County, Florida. Specifically, the site is located at latitude 30 deg 25 min 49.45 sec North/ longitude 87 deg 13 min 54.18 sec west, and is referenced by the State of Florida as facility ID#17/8626031. The area surrounding the site consists of an unoccupied fuel pump building adjacent to a recently constructed 20,000 gallon above ground storage tank (AST) placed on a concrete slab. Other buildings near the site are a purchasing warehouse located west of the site and the energy center located south of the site.

According to the FDEP database, the previous petroleum storage system consisted of two 10,000-gallon, single-wall, fiberglass USTs that were installed in July 1976. The storage tank systems were previously

used to fuel multiple standby electrical generators and a fire pump. Off-road diesel fuel stored in the USTs was conveyed through aboveground steel piping to the adjoining cement block pump house before being transferred aboveground to the standby generators and fire pump. The fuel return lines to the tanks were also placed aboveground. The USTs were outfitted with spill containment vessels and return and supply line piping sumps. The tanks were buried end-to-end in a north-south direction and were surrounded by a 2 to 3-foot thick layer of pea gravel. The tanks were located between and in close proximity to a cement block building and pad-mounted electrical transformers vital to the electrical supply to the hospital.

Petroleum staining observed on the northern USTs fill tube and the return containment sump during the storage tank closure assessment prompted the generation and submittal of a Discharge Report Form (DRF) to the FDEP on October 19, 2009. The DRF reported an estimated volume of diesel fuel discharged to be between 25 and 100 gallons. The affected media was listed as soil and groundwater and the cause of the release as unknown. Action taken in response to the discharge was source removal activities.

On October 15, 2009, EPT, commenced closure assessment activities at the Baptist Hospital, Inc., petroleum storage tank facility (Energy Center). The closure assessment sampling and analyses were conducted in accordance with the FDEP's "Storage Tank System Closure Assessment Requirements" per Section 62-761.800 (4) (c), F.A.C.

Due to the proximity of the tanks to the pump house building and other structures, the tanks were closed in-place by removing ends on the top section of the tank and filling the void with a white fine to medium grained dry clean sand. Soil headspace vapor samples collected from the overlying soil and pea gravel backfill from the vicinity of the tank's fill port ranged from 2,750 parts per million (ppm) to 4,601 ppm from near land surface to the top of the tank. Headspace vapor concentrations of 50 ppm are considered excessive for soil impacted by diesel fuel. Stained and excessively contaminated soil/pea gravel was also encountered next to the fuel return sump at the tank's south end. Soil/pea gravel exhibiting petroleum-like odor and/or excessive vapor concentrations were segregated from the other excavated soil media and placed on plastic sheeting for transport offsite during the UST closure. A soil screening summary from soil borings and stockpiled soils performed during the UST closure are provided in **Table 1**.

The pea gravel backfill was found to be saturated with red dyed diesel fuel and water at approximately 6 to 7-feet below land surface. Product saturated gravel was present on both the east and west sides of the UST. Soil borings placed 5 to 10-feet away from the tank pit revealed that a perching unit of dry, iron-rich, silty-sand existed at approximately 7-feet bls. The brown and tan silty sandy soil just above the unit was saturated with water. The headspace vapor concentrations measured in the saturated soil resting on the perching unit north and east of the UST were less than 1 ppm, and, similar soil samples collected a short distance west of the tank exhibited corrected vapor levels of 2,910 ppm and 3,436 ppm

and emitted weathered diesel-like odors. A 6-inch layer of dyed diesel product was present in a shallow compliance well located outside the southwest corner of the tank pit. Product was not observed in a sample of the saturated soil collected adjacent to the well. Further tank removal work was terminated until provisions were made for the removal and disposal of the water and product within the tank pit.

A sample of the obviously contaminated soil was collected to confirm whether the material was a hazardous or special waste (for disposal purposes), and, to determine if the soil contained contaminants of concern above State standards. The soil was found to be a special waste and was subsequently accepted for disposal in Escambia County's Perdido Landfill. The same soil was also found to contain one or more volatile and semi-volatile organic compounds and total recoverable petroleum hydrocarbons in concentrations that exceeded the State's cleanup target levels, as reported in Chapter 62-777, F.A.C and reported in **Table 2** and **Table 3**. That same day, four 2-inch diameter well points were driven to the bottom of the pea gravel backfill on the east and west sides of the North Tank. A vacuum truck operated by Aaron Oil Company, Mobile, Alabama was commissioned to evacuate water and product from the tank pit through the well points. Approximately 1,724-gallons of liquid were removed, dropping the liquid level in the tank pit to between 9 and 10-feet bls.

Excavation activities resumed the next day. Soil samples from the sidewalls of the tank pit at 8 to 10-feet bls exhibited a strong diesel-like odor and produced an iridescent sheen when placed in water. The northern half of the North tank was severed from the mostly unearthed southern half and removed for offsite disposal. Water and product subsequently filled the bottom foot of open tank remaining in the ground. A vacuum truck belonging to SWS First Response was commissioned to evacuate the liquid accumulating in the tank. The tank's bottom and sidewalls were perforated with 0.5-inch holes 6-inches to a foot above the bottom of the tank to allow product and water to move efficiently into the tank. Approximately 1,800-gallons of liquid were removed that night and an additional 185-gallons the following morning of liquid were pumped from the UST into a skid tank before the tank filling activities began. It was decided that further excavation activities would jeopardize the structural integrity of near-by structures vital to the hospital's operations and that the Subject USTs would be filled in-place and not removed. The remaining portion of the North Tank and the entire South Tank were filled with white, well sorted medium sand to 1-foot above the tops of the tanks to facilitate future remediation efforts. A layer of black polyethylene sheeting was placed between the white sand and the overlying brown loamy sand backfill material. The backfilled and compacted areas of disturbed ground overlying and in the vicinity of the tanks were covered with sod mats. Approximately 91-tons of excavated soil and pea gravel were transported offsite for disposal in the County's lined Class I sanitary landfill.

A groundwater extraction system consisting of two groundwater recovery wells was started on December 13, 2013 to address the remaining dissolved-phase hydrocarbon contamination at the site. The recovery wells were installed to a depth of eight feet bls and are four inches in diameter. A total of 3,412 gallons of groundwater were recovered by the system between startup and September 18, 1994

when the system was turned off due to impending construction at the hospital. A current site map is included as **Figure 1**.

Soil Boring Installation and Screening

EPT personnel mobilized to the site on March 22, 2017 to oversee the installation of soil borings SB-01-2017, SB-02-2017, and SB-03-2017 using a stainless steel hand auger bucket due to the presence of buried utilities within the assessment area. Soil boring SB-01-2017 was installed adjacent to MW-5R, SB-02-2017 was installed adjacent to the former location of MW-12, and SB-03-2017 was installed adjacent to the former location of RW-1. SB-01-2017 was installed to a depth of 6 feet below land surface (bls). SB-01-2017 could not be advanced deeper despite the advancements of multiple offset borings due to presence of subsurface debris encountered in this area of the site. SB-02-2017 was installed to the planned depth of 20 feet bls. SB-03-2017 was installed to a depth of 7 feet bls, and could not be advanced further due to the presence of gravel backfill associated with the former fiberglass USTs. Soil samples were collected for field screening using an Organic Vapor Analyzer (OVA) at 1 foot vertical intervals to the boring terminus for soil borings SB-01-2017 and SB-03-2017, and to 10 feet bls, then at two feet intervals thereafter to 20 feet bls for SB-02-2017. The OVA screening results are summarized as follows:

- SB-01-2017 - Highest OVA vapor concentration of 74 parts per million (ppm) was encountered at 5 feet bls. A weather petroleum odor and dark gray staining were observed in this sample.
- SB-02-2017 - No OVA results exceeded <1 ppm. No odor or staining was observed in any of the samples collected from this boring.
- SB-03-2017 - Highest OVA vapor concentration of 7 ppm was encountered from 6-7 feet bls. No odor or staining was observed in any of the samples collected from this boring.

Soil headspace OVA concentrations encountered during this and previous investigations performed at the site are summarized in **Table 1** and depicted on **Figure 2.**

Soil Sample Collection

A confirmatory soil sample was collected from each of the three soil borings advanced during the recent supplemental assessment for laboratory analysis. Soil samples were collected from SB-01-2017 at 5 feet bls, SB-02-2017 at 20 feet bls, and SB-03-2017 at 4 feet bls. Soil samples were placed in clean containers provided by the laboratory, properly labeled, immediately packed on ice in a cooler and shipped under a chain of custody to a NELAC certified laboratory (ESC Lab Sciences, Inc. E87487) for analysis. The samples were analyzed for the presence of benzene, toluene, ethylbenzene, total xylenes, and methyl tert butyl ether (BTEX+MTBE) via EPA Method 8260, polycyclic aromatic hydrocarbons (PAHs) via EPA 8270, and total recoverable petroleum hydrocarbons (TRPH) via the Florida Pro (FL-PRO) Method.

Additional soil samples were collected and submitted to be held by the laboratory for Synthetic Precipitation Leaching Procedure (SPLP) analysis if deemed necessary. Since none of the soil samples collected exceeded the laboratory method detection limits (MDL) and/or the respective Cleanup Target

Levels (CTLs) for BTEX+MTBE or PAH compounds, SPLP extractions and analyses were not requested. Soil sample SB-01-2017 was further analyzed for TPH Fractionation analyses to determine whether individual TPH fractions were exceeded. A summary of soil analytical results for the recent soil assessment are outlined below:

- SB-01-2017 – 5 feet bls – The Benzene concentration (0.0237 U mg/kg) exceeded the leachability SCTL (0.007 mg/kg) despite being analyzed for but not detected above the method detection limit due to the dilution factor at which the laboratory was required to run the sample. The TRPH concentration (939 mg/kg) exceeded the leachability and direct exposure (residential) SCTLs (340 mg/kg and 460 mg/kg, respectively). Subsequent TPH fractionation analysis demonstrated that the sample did not exceed CTLs for TRPHs.
- SB-02-2017 – 20 feet bls – All contaminants of concern were below their respective SCTLs.
- SB-03-2017 – 4 feet bls – All contaminants of concern were below their respective SCTLs.

Table 2 summarizes the soil analytical data obtained for this and previous investigations and, **Table 3** summarizes the TRPH Fractionation results. Analytical results obtained for the recent assessment work are depicted on **Figure 3**. Copies of the soil boring and instrument calibration logs for the March 2017 field work are included in **Appendix A**; the soil laboratory analytical reports are included in **Appendix B**.

Conclusions

- EPT personnel mobilized to the site on March 22, 2017 to advance three soil borings to 20 feet bls for the collection of field screening and laboratory analyses. Due to the presence of subsurface debris and/or pea gravel encountered at the site, only SB-02-2017 was advanced to proposed depth of 20 feet bls.
- Soil samples collected from SB-01-2017 exceeded the leachability SCTL for Benzene but was below the laboratory MDL. Since this sample was obtained from below the top two feet of land surface, SPLP analysis was not conducted.
- SB-01-2017 also exceeded the leachability and direct exposure SCTLs for TRPH. However, further analysis for the TPH fractions were below the leachability and direct exposure SCTLs.
- An area of perched groundwater was encountered at approximately 5 feet bls at the location of SB-03-2017, within the area of the former UST tank pit. This perched water table was not encountered in the other soil borings installed during this and other soil assessment activities. The depth to water in the vicinity of the soil borings, as determined in March 2017, was encountered at 33.21 feet in DW-3R, while both shallow monitoring wells MW-5R and MW-13R were dry.

Recommendations

Based on the recent soil assessment, soil contamination in the area for the formed underground storage tank system are low, restricted to a small area of the site and pose minimal direct exposure threats to human health. Due to the limited nature of remaining contamination at the site and as discussed with the FDEP Site Manager, EPT recommends that the site be issued a No Further Action with Conditions

following implementation of proper engineering control measures and required deed restrictions on this portion of the property. EPT recommends meeting with the engineering staff of the FDEP, Baptist Hospital and EPT representatives to discuss engineering control options and deed restrictions appropriate for the site and other remedial options.

If you have any questions, comments or require additional information, please contact the undersigned at (850) 912-8909 or via email at bernie@enviro-pro-tech.com.

Sincerely,
Enviro Pro Tech, Inc.

Bernie Weimer
Project Manager

Exceedences are **BOLD**

U = the compound was analyzed for but not detected.

I = The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

L = Off-scale high. Actual value is known to be greater than the value given.

V = Indicates the analyte was detected in both the sample and method blank.

Field Notes, Soil Boring and Equipment Calibrations Logs

PRIVATE PROJECT — 1 OF 2 — BERNIE WEIMER, CHRIS EAST

EAST

17862031

3/22/17 BAPTIST HOSPITAL SOIL BORING (52)

0700 DEPARTED FOR SITE, COMPANY VAN Y31 RBM.

0730 ONSITE, CLEAR 65°F. SETUP FOR WORK CALIBRATED OVA/FID, MARKED SOIL BORING LOCATIONS. SCOPE OF WORK: (3) SOIL BORINGS TO 20'; SB-01-2017 @ MW5R, SB-02-2017 @ MW12, SB-03-2017 @ RW-1. COLLECT SOIL SAMPLE FROM HIGH VADOSE AT EACH LOCATION. AWAITING CREW, NOTIFIED SITE OF WORK

0800 CREW ON SITE BRIEFED SOW AND SAFETY. COMMENCED WORK. (DATA RECORDED ON SEPARATE BORING LOGS.) (BERNIE OFFSITE)

0900 STOPPED SB-03-2017 (RW1 - LOCATION) @ 7' DUE TO SATURATED GRAVELLY SOILS ENCOUNTERED AT ≈ 5'-6'. NOTIFIED P.M. (DTW @ MW13R IS ALY @ 15.2')

0915 DIRECTED BY P.M./S.M TO SAMPLE HIGH VADOSE (4') FROM SB-03-2017 (RW1). WORK @ SB-01-2017 CONTINUED.

0930 FAEA/ESCEHG SITEMANAGER JAKE GALLMAN ONSITE.

1000 MULTIPLE REFUSALS OF SB-01-2017 (MW5R) DUE TO TANK PIT GRAVEL/FIBERGLASS DEBRIS. FOUND PETRO ODOR (STAINED AREA FROM 4.5'-5.5'. THEN CLEAN TO 6'. DIRECTED BY FAEA S.M. TO SAMPLE @ STAINED AREA AND DISCONTINUE STEPOUTS. CREW TAKES BREAK. FAEA S.M. OFFSITE.

1015 SAMPLED SB-03-2017 @ 4' FOR LABS BTEX+MTBE, PAHS, TRPHS, AND SPLP HOLD.

1035 SAMPLED SB-01-2017 @ 5' FOR LABS BTEX+MTBE, PAHS, TRPHS AND SPLP HOLD.

3/22/17 [signature] INSPECTOR

PRIVATE PROJECT
17 86 2603, 2 of 2 CHRIS EAST

3/22/17 (53) BAPTIST HOSPITAL SOIL BORINGS

1115 FIRST REFUSAL OF SB-02-2017 (MW12) @ 9' (BURIED BRICK BEARS / ROCKS), OFFSET AND CONTINUED WORK.

1135 SECOND REFUSAL AT SAME INTERVAL. CREW SENT TO LUNCH PRIOR TO 3RD ATTEMPT. TOOK LUNCH ONSITE.

1245 CONDUCTED MIDDAY CALIBRATION. CONTINUED WORK

1300 DTW @ DW-3(R) 33.21' MW SR - DRY @ 8'

1400 NOTIFIED FROM S.M / P.M. OF STATUS. SB-02-2017 (MW-12) COMPLETED TO 20' CLEAN AND DRY NO ODORS / NO STAINING. CREW BACKFILLING HOLES CLEANING SITE.

1415 CREW OFF SITE. WORK COMPLETE. SAMPLED BORINGS SB-02-2017 (MW12) @ 20' FOR BTEX + MTBE, PAHS, TRPH AND SPLP HOLD. AS PER FROM S.M.

1425 CONDUCTED METER POST CAL CHECK. LOADING UP, DECONNED EQUIPMENT, COC'S SHIPPING DOCUMENTS PREPARED.

1455 OFFSITE, SITE CLEAN, WORK COMPLETE.

1600 HOME FOR DAY.

AGREEMENT AND ACKNOWLEDGEMENT SHEET

EPT personnel have the authority to stop field activities at this site if any activity is not performed in accordance with the requirements of this HASP. All EPT project personnel, subcontractor personnel, and visitors are required to sign the Agreement and Acknowledgement Sheet **prior** to conducting field activities at this site.

ENVIRO-PRO-TECH, INC. AGREEMENT AND ACKNOWLEDGEMENT STATEMENT	
1. I have reviewed and fully understand Part A of this HASP and my responsibilities. 2. I am aware that additional, standardized health and safety information is available for me in Part B of this HASP. 3. I agree to abide by the provisions of the HASP.

ANALYTICAL REPORT

March 30, 2017

Enviro-Pro-Tech, Inc

Sample Delivery Group:	L897725
Samples Received:	03/23/2017
Project Number:	
Description:	Baptist Hospital
Site:	17/8626031
Report To:	Christopher K. East / Bernie Weimer 99 S.Alcaniz St. suite A Pensacola, FL 32502

Entire Report Reviewed By:

John Hawkins
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

John Hawkins
Technical Service Representative

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier	Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	The value is outside laboratory established criteria.
U	Indicates the compound was analyzed for but not detected above the method detection limt.
V	Indicates the analyte was detected in both the sample and method blank.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**

***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

ANALYTICAL REPORT

April 12, 2017

Enviro-Pro-Tech, Inc

Sample Delivery Group:	L899229
Samples Received:	03/23/2017
Project Number:	
Description:	Baptist Hospital
Site:	17/8626031
Report To:	Christopher K. East / Bernie Weimer 99 S.Alcaniz St. suite A Pensacola, FL 32502

Entire Report Reviewed By:

John Hawkins
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

John Hawkins
Technical Service Representative

Sample Handling and Receiving

Analysis was performed from an improper container for the following samples.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
U	Not detected at the Reporting Limit (or MDL where applicable).
RPD	Relative Percent Difference.
(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Rec.	Recovery.

Qualifier	Description
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Subject: Deliverable Review
Glen's Service Station Inc.
2101 North E Street
Pensacola, FL Escambia
FDEP Facility ID# 17/8626732
Discharge Date: September 9, 2008 (Non-program)

Dear Mr. Okab:

The Florida Department of Health in Escambia County, on behalf of the Florida Department of Environmental Protection (FDEP), has reviewed the Post Active Remediation Monitoring Report dated and received June 19, 2024, submitted for the above referenced site located in Escambia County, Florida. We found the documents submitted to date to be adequate to meet the requirements of Chapter 62-780 Florida Administrative Code (FAC), and applicable Department of Environmental Protection guidelines. However, the following comment needs to be addressed in future system operations and reports.

1) Please include the elevations and depth to water for all wells including MW-2R for each date on Table 2 – Groundwater Elevations Summary.

We agree with your consultant's recommendation to continue Post Active Remediation Monitoring activities semi-annually sampling MW-2R. In addition, the site registration should be updated with the new owner's information. A copy of the Storage Tank Facility Registration Form is attached below.

A PARM Report should be submitted to the below office or email address by December 19, 2024.

The DEP Facility Number of this site is 17/8626732. Please use this identification number on all future correspondence. We request that you keep The Department informed of petroleum cleanup activities at this site, and, when applicable, submit notification as required by Chapter 62-780, F.A.C. If you have any questions concerning the review of this report, please contact me at 850 823-5834, or at the below email address.

Respectfully,

Hazel Heffernan
Environmental Specialist II
Florida Department of Health in Escambia County

1.0 INTRODUCTION

The Florida Department of Environmental Protection (FDEP) has historically provided financial assistance for cleanup of petroleum contamination. Through various programs, most petroleum discharges that occurred prior to December 31, 1998, are eligible for state cleanup funding. The State of Florida no longer provides funding assistance for newly occurring reported discharges. The responsible party or parties and/or their insurance providers must bear the cost for any required assessment and cleanup of ineligible releases. The scope of work described in this report applied environmental forensics techniques to identify when petroleum product discharge(s) occurred in relation to the eligibility deadlines.

The FDEP tasked LFR Inc. (LFR) to conduct a file review, field investigation, and data analysis to prepare a Forensic Site Investigation (FSI) Report for Glen's Service Centers, Inc. located at 2101 North E Street in Pensacola, Florida (FDEP Facility Identification 178626732; "the Site"). A file review and evaluation describe the compliance, assessment, and remediation chronology of the Site. The data from the file review was used to define a preliminary conceptual site model (CSM), and the analysis of field data, coupled with the forensic expert analysis, tested the CSM and was used to estimate the approximate age of any release(s) of petroleum hydrocarbons at the Site.

This report presents the findings, conclusions, and recommendations obtained from implementing the following scope of services:

- file review and evaluation of compliance history, assessment, and remediation
- groundwater, free-product, and retail petroleum-product sampling
- forensic analytical laboratory services
- expert forensic evaluation of analytical results

2.0 BACKGROUND

The Glen's Service Station is located at 2101 North E Street, Township 2 South, Range 30 West, Section 17, Escambia County, Pensacola, Florida. Figure 1 illustrates the location of the Site with respect to geographical surroundings. The Site currently operates as a gasoline fueling station and convenience store. A site map—including the locations of underground storage tanks (USTs), dispensers, and other pertinent features—is shown on Figure 2.

An area survey was conducted by Enviro-Pro-Tech, Inc. (EPT) on February 2, 2007. Residential properties lie to the north, south, east, and west of the Site. Immediately south of the Site lies Baptist Hospital. Pensacola High School is located to the east. The nearest water body is Pensacola Bay, which is located approximately 2.4 miles south of the Site.

2.1 Site History

The Site has operated as a fueling station since 1971 when four USTs were installed on the property, including two 4,000-gallon steel USTs containing unleaded gasoline, one 1,000-gallon UST containing diesel fuel, and one 6,000-gallon UST containing unleaded gasoline. In October 1994, the UST containing diesel fuel and one 4,000-gallon UST containing unleaded gasoline were closed in-place. Three of the USTs were located to the east of the dispenser island, and one UST is located to the south of the convenience store building. The locations of the current and formerly active USTs are shown on Figure 2. The Site continues to operate as a gasoline fueling station and convenience store dispensing regular and mid-grade unleaded gasoline. According to Bobby Payne, the property manager representing the Site owner, prior to October 1994, the Site also dispensed premium unleaded gasoline and diesel fuel.

A Discharge Notification Form (DNF) was filed with the State in November 1988, and the Site was entered into the Early Detection Incentive (EDI) program in September 1989. A Contamination Assessment Report (CAR) was submitted by Groundwater Technology Government Service, Inc. (GSI) in July 1993 and approved in August 1993. Both groundwater and soil contamination were discovered during the assessment activities in concentrations above the Florida groundwater and soil cleanup target levels (GCTLs and SCTLs, respectively) specified in Chapter 62-777, Florida Administrative Code (FAC; FDEP 2005a). The primary source area appeared to be the tank pit east of the dispenser island on the eastern portion of the property (Figure 2). A Limited Scope Remedial Action Plan (LSRAP) was submitted by GSI in April 1994, and a soil-vapor extraction (SVE) system was started in September 1994. The system operated and was monitored until a No Further Action (NFA) was requested in March 1996 by GSI. The NFA was approved in October 1996, and the monitoring wells at the Site were abandoned in 1998.

On March 28 and 29, 2006, EPT conducted a system investigation at the Site for insurance purposes. Results of the soil screening and analyses conducted in the field during the system investigation showed petroleum-affected soil was present beneath the east side of the eastern tank pit. Based on the elevated levels of toluene, ethylbenzene, and total xylenes and the lower levels of the more soluble constituents (benzene and methyl tertiary-butyl ether [MTBE]), EPT concluded that the contamination discovered did not appear to be of recent occurrence.

After a review of the request for NFA status recommended by GSI in the LSRAP Monitoring Only Plan Annual Report dated March 1996, EPT noted that soil borings were advanced only on the west side of the source area (the eastern UST pit) to depths of 20 and 25 feet below ground surface (bgs) during confirmation sampling in 1995. However, confirmation soil laboratory samples obtained by GSI were collected at a maximum depth of 10 feet bgs. Excessive contamination was encountered by EPT during the system investigation in a boring (SB-12) at 20 feet bgs located to the east of the tank pit.

A monitoring well (MW-6) located south (downgradient) of EPT soil boring SB-12 was sampled by GSI in November 1993; constituents analyzed were below detectable levels. EPT stated that it was probable the contamination was not detected during the November 1993 sampling event as the water table was about 5 feet lower (approximately 30 feet bgs) than water table was during their investigation and 10 feet deeper than the zone of contamination encountered in SB-12 at 20 feet bgs. Based on all data collected, EPT requested to rescind the NFA approval letter (October 1996), and requested that the contamination discovered at SB-12 be addressed under State-funded cleanup with the reinstatement of the Site into the EDI program.

During February through May 2007, EPT conducted supplemental site-assessment activities at the Site. Assessment activities included the installation of direct-push technology soil borings for vadose zone lithologic description and organic vapor analyzer (OVA) screening; the collection of soil samples for laboratory analysis; and the installation of monitoring wells for the collection and laboratory analysis of groundwater samples.

Soil analytical results and OVA screening indicated that contaminated soil was present near the tank pit located east of the dispenser island. Groundwater analytical results are summarized in Table 1, and show that the highest concentrations of dissolved hydrocarbons were detected in MW-3 near the tank pit and on the southern portion of the property monitoring wells (MW-2, MW-5, and MW-6).

During assessment activities, free product was detected in MW-3 in March 2007. As a result, a tank and line test was performed on March 26, 2007, by Clemens Fuel Systems, Inc. Both passed tightness testing. Free product gauging and recovery activities were performed at the Site after free product was detected in monitoring well MW-3. Free product was gauged and removed once a week for eight weeks and two times during the first week. Free product and water was removed using a Teflon hand bailer and was stored in 55-gallon drums.

Based on information obtained during the supplemental site-assessment activities, EPT concluded that the contamination encountered at the Site did not suggest a new release at the Site, and that the plume may possibly be migrating off site. They recommended further site assessment (both vertically and horizontally) be conducted to delineate the contamination plume.

2.2 Compliance History Summary

The compliance history of the Site was assessed by conducting file reviews of FDEP's OCULUS™/STCM (Storage Tank Contamination Monitoring) and Florida Inspection Reporting for Storage Tanks databases. Additional information was obtained by communication with Mr. Payne.

A site visit was also conducted to observe current conditions at the Site and adjacent land use; these activities occurred on March 6, 2008. Table 2 is a chronology of principal documents and findings observed during the file review.

There are currently two active USTs at the Site; both were installed in 1971. Records indicate that two additional USTs were installed in 1971, and were closed in-place in October 1994. According to Mr. Payne, the gas station stopped selling premium unleaded gasoline at this time and the two remaining USTs have since contained regular and mid-grade unleaded gasoline.

The following events are observed in the records:

- November 29, 1988: Initial DNF for discovery of discharge submitted by the Site owner. According to DNF, the products were leaded and unleaded gasoline.
- July 6, 1989: According to EDI Program Compliance Verification Checklist, there was evidence of an apparent discharge near the dispensers. This conclusion was based on repair history and slight gasoline odor in soil.
- September 12, 1989: The FDEP determined that the Site was eligible for state cleanup under EDI Program.
- July 20, 1993: GSI submitted a CAR verifying the presence of petroleum contamination in the soil and groundwater at the Site. FDEP approved the CAR, and requested a Remedial Action Plan be prepared.
- May 9, 1994: FDEP approve LSRAP submitted by GSI on April 20, 1994. The LSRAP specified an SVE system consisting of one SVE point to remediate the contaminated soil on site. A Monitoring Only Plan was recommended based on the FDEP's NFA and Monitoring Only Guidelines for Petroleum Contaminated Sites.
- March 12, 1996: In an annual report, GSI concluded that the remedial action initiated at this Site was successful in removing petroleum constituent contamination in the soil beneath the pump island and UST area. GSI requests that the Site be considered for NFA status based results of six consecutive groundwater-sampling events in which all samples collected and analyzed were within FDEP guidelines for No Further Action.
- October 25, 1996: A Site Rehabilitation and Completion Order (SRCO) was submitted for the Site, after post-remedial monitoring confirmed that target levels were met and maintained. The Site was granted NFA status, and the monitoring wells at the Site were abandoned in 1998.
- July 31, 2006: Storage Tank Facility Annual Site Inspection Report concludes the two USTs at the Site are in compliance.
- September 11, 2006: EPT requested rescission of the SRCO (dated October 25, 1996) due to odors or visible signs of petroleum in the vicinity of the fueling dispensers on March 28 and 29, 2006.
- October 16, 2006: FDEP rescinded prior SRCO noting that soil exceeded SCTLs for leachability, and the Site required supplemental assessment/remediation. FDEP also indicated that the Site remained eligible under prior EDI program for November 29, 1988 discharge. Site score was 60 and funding was available.

- August 3, 2007: FDEP state that Supplemental Site Assessment Report submitted June 26, 2007, and Response to Comments were satisfactory and acceptable and demonstrate that the fieldwork was satisfactorily performed.
- November 19, 2007: Storage Tank Facility Annual Site Inspection Report concluded the two USTs at the Site were in compliance.

3.0 CONCEPTUAL SITE MODEL

LFR used the data from the file review to define a preliminary CSM. Analyses of field data, coupled with the forensic expert analysis, were used to test the CSM and estimate the approximate age of any release(s) of petroleum hydrocarbons at the Site.

One release was documented at the Site prior to the field investigation conducted by LFR. The initial release reported on November 29, 1988, was located near the tank pit east of the dispenser island. This release was documented by OVA soil screening, and laboratory analysis of soil and groundwater samples collected during the Site assessment activities conducted between 1992 and 2006 (Sections 2.1 and 2.2). A second release was suspected as evidenced by the free product detected in monitoring well MW-3 and high concentrations of petroleum hydrocarbons measured in groundwater samples collected from monitoring wells installed by EPT in 2007.

4.0 SUMMARY OF FIELD INVESTIGATION ACTIVITIES

4.1 Sampling and Analysis Objectives

LFR collected samples at the Site to evaluate whether there was a discharge of petroleum hydrocarbons, other than the documented release in 1988, and if there was a new discharge, approximately when that release occurred. FDEP also tasked LFR to evaluate whether any remaining contamination existing at the Site related to the 1988 release. To minimize cost while obtaining sufficient data to achieve the objective of sampling, emphasis was placed on analysis of non-aqueous phase liquids (NAPL; free product) observed in monitoring well MW-3. One groundwater sample was collected from the downgradient monitoring well MW-5 as a representative of the dissolved-phase contamination previously detected in the groundwater at the Site. Two neat samples of the retail product currently sold on the Site (regular unleaded and mid-grade unleaded gasoline) were also collected for laboratory and forensic analyses.

Groundwater, free-product, and neat retail-product samples were collected for analysis by environmental forensic analytical method (Modified United States Environmental Protection Agency Method [EPA Method] 8260B with an expanded target list) for paraffins, isoparaffins, aromatics, naphthenes, and olefins (PIANO) volatile hydrocarbons using gas chromatography (GC) / mass spectrometry (MS). The reported parameter list was expanded to also include typical fuel oxygenates, such as MTBE, tertiary-amyl methyl ether, and tertiary butyl alcohol (an impurity in MTBE and an MTBE degradation product).

The groundwater sample was also analyzed using modified EPA Method 8015B gasoline range organics (GRO) analysis, and ethanol using GC / flame ionization detector (FID).

The Modified EPA Method 8015B is applicable to the analysis of petroleum hydrocarbons, including GROs. GROs correspond to the range of alkanes from C_6 to C_{10} and covering a boiling point range of approximately 60 to 170 degrees Celsius (U.S. EPA 1996). The analysis provides a total estimate of the hydrocarbon concentration within this carbon range representative of gasoline. It is sometimes reported as Total Petroleum Hydrocarbons-Gasoline (TPH[g]). The method also provides a chromatogram to visually fingerprint the GROs. There is no SCTL for GROs/TPH(g) for comparison.

Free-product and neat retail-product samples were collected for PIANO analysis and ethanol GC/MS. Additional analysis for lead alkyl speciation by Modified EPA Method 8270 was conducted on the free-product sample collected from monitoring well MW-3.

Analytical signatures from these analyses improved estimates of the relative ages of any release(s) at the Site to evaluate whether a release was recent (e.g., within the past decade).

4.2 Groundwater Sampling

On March 6, 2008, LFR collected a groundwater sample from one previously installed monitoring well at the Site (MW-5). Purging and sampling was performed in accordance with the revised FDEP standard operating procedures (FDEP 2004 and 2005b). Monitoring wells were purged by lowering high-density polyethylene (HDPE) tubing below the water level and evacuating the required volume. After the appropriate volume was evacuated, groundwater parameters (pH, temperature, specific conductivity, dissolved oxygen, and turbidity) were measured at a minimum of three-minute intervals. The groundwater sampling log is included in Appendix A.

The groundwater sample was collected by pumping the groundwater into the HDPE tubing with the peristaltic pump until a constant flow was obtained (no air bubbles), stopping the pump, withdrawing the tubing from the well, and reversing the pump to allow the water to be collected into 40-milliliter vials from the intake portion of the tubing.

The groundwater sample was sent by overnight courier to Alpha Analytical for conventional and environmental forensic analytical services. Groundwater samples were collected for analysis using Modified EPA Method 8015B for GRO and ethanol, and Modified EPA Method 8260B for PIANO analytes. Groundwater analytical results for PIANO and GRO analyses are summarized in Tables 3 and 4, respectively. Table 4 also includes analytical results from the ethanol analysis. The laboratory analytical reports are included in Appendix B.

4.3 Neat Retail Product Sampling

On March 6, 2008, LFR collected one sample from each of the two gasoline products at the Site. Samples of regular unleaded gasoline (87 octane) and mid-grade unleaded gasoline (89 octane) were collected in 20-milliliter vials directly from product dispensers for laboratory analysis, and sent by overnight courier to Alpha Analytical.

4.4 Free Product Sampling

On March 6, 2008, LFR collected a sample of free product previously observed in monitoring well MW-3. Due to the insufficient amount of sample in MW-3 to conduct all analyses, LFR returned to the Site on March 28, 2008, to re-sample the free product from MW-3. The free product samples were collected with a bailer and transferred to 20-milliliter vials for laboratory analysis, and sent by overnight courier to Alpha Analytical.

5.0 SUMMARY OF LABORATORY ANALYTICAL RESULTS

This section summarizes the analytical data obtained from groundwater, free-product, and neat retail-product samples collected at the Site. An environmental forensic evaluation of these data was conducted to assess the fuel type of hydrocarbon contamination at the Site, evaluate degree of the contaminant weathering, and estimate the age of petroleum hydrocarbon product release(s). The environmental forensic evaluation report is presented in Appendix C and is summarized in Section 6.2.

5.1 Groundwater

5.1.1 Paraffin, Isoparaffins, Aromatics, Naphthalene, and Olefins and Oxygenates

PIANO analysis was conducted on the groundwater sample collected from MW-5. The groundwater sample exhibited MTBE (27.9 micrograms per liter [μg/l]) at a concentration greater than the GCTL. The laboratory analytical report is presented in Appendix B and the results are summarized in Table 3.

5.1.2 Gasoline Range Organics

Table 4 contains a summary of analytical results for the groundwater sample collected from MW-5 and analyzed using Modified EPA Method 8015B for GROs by GC/MS. The groundwater sample collected from MW-5 contained GRO concentrations above the laboratory reporting limits (230 μg/l). The laboratory analytical report is presented in Appendix B.

5.2 Free Product

5.2.1 Paraffin, Isoparaffins, Aromatics, Naphthalene, and Olefins and Oxygenates

PIANO analysis was conducted on the free-product sample collected from MW-3. The sample required two dilutions (dilution factors of 10 and 500) to obtain results for all analytes within the calibration range of the GC/MS; results for both dilutions are reported in Table 3. No oxygenates were detected in the free-product sample. The concentration of MTBE (58.6 milligrams per kilogram [mg/kg]) in the free-product sample was detected between laboratory method detection limits (MDL) and the practical quantitaton limit (PQL). The laboratory analytical report is presented in Appendix B and the results are summarized in Table 3.

5.2.2 Lead Alkyl Speciation

Table 4 contains a summary of analytical results for the free-product sample collected from MW-3 analyzed using Modified EPA Method 8270 for lead alkyl speciation. No analytes were detected above the MDL. The laboratory analytical report is presented in Appendix B.

5.2.3 Ethanol

Table 4 contains a summary of analytical results for the free-product sample collected from MW-3 analyzed using Modified EPA Method 8270C for ethanol. Ethanol was not detected above the MDL in the free product collected from MW-3. The laboratory analytical report is presented in Appendix B.

5.3 Neat Retail Product (Regular and Mid-Grade Unleaded)

5.3.1 Paraffin, Isoparaffins, Aromatics, Naphthalene, and Olefins and Oxygenates

PIANO analysis was conducted on the two neat retail-product samples collected from the fuel dispensers at the Site (regular unleaded gasoline and mid-grade unleaded gasoline). The regular unleaded sample required two dilutions (dilution factors of 10 and 200), and the mid-grade unleaded sample required two dilutions (dilution factors of 10 and 500) to obtain results for all analytes within the calibration range of the GC/MS; results for both dilutions are reported in Table 3. No oxygenates were detected in either unleaded gasoline sample, possible due to the high detection limits for this laboratory method. The laboratory analytical report is presented in Appendix B and the results are summarized in Table 3.

5.3.2 Ethanol

Table 4 contains a summary of analytical results for the neat retail-product samples analyzed using Modified EPA Method 8270C for ethanol. Ethanol was not detected above the MDL in either of the neat retail products dispensed at the Site. The laboratory analytical report is presented in Appendix B.

6.0 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

6.1 Revised Conceptual Site Model

The results of the field investigation confirm the initial CSM. At least two releases of petroleum hydrocarbons are believed to exist at the Site. Both releases appear to be located near the tank pit east of the dispenser island. The first release was reported by the Site owner on November 29, 1988, with an initial DNF for discovery of discharge submitted to FDEP. According to the DNF, the petroleum products were suspected to be leaded and unleaded gasoline. Based on the environmental forensic evaluation discussed in Section 6.2, it is believed that a second release occurred less than five years ago.

6.2 Timing of Release

An expert environmental forensic evaluation was conducted by Environmental Geochemistry Consulting (EGC) of Moorpark, California, to estimate the approximate age of the petroleum hydrocarbon releases described above. The evaluation by EGC is presented in Appendix C. EGC's fingerprinting approach for product-type identification is based on an evaluation of the chemical composition of contaminants and pattern recognition analysis of the analytical data. EGC's environmental forensic evaluation concluded that:

- Results of PIANO analysis indicate that the free-product sample collected from MW-3 represents a weathered unleaded gasoline fuel similar to that currently sold at the Site as mid-grade gasoline.
- The degree of weathering found in the free-product sample from MW-3 indicates that it has not undergone a prolonged exposure in the subsurface. Typically, this degree of weathering occurs in the sample within a time period of less than five years after gasoline release.
- The relatively advanced degree of the alteration of the free-product sample by evaporation is most probably related to the remedial activities, such as well purging and bailing, that increase the rate of gasoline weathering.
- The groundwater contamination at the Site related to petroleum hydrocarbons is consistent with being predominantly from the free product accumulated in monitoring well MW-3.

6.3 Conclusions and Recommendations

LFR conducted the FSI to evaluate whether there was a petroleum hydrocarbon discharge at the Site other than the documented release in 1988, and if there was a newer discharge, approximately when that release occurred. The FSI also attempted to conclude whether any remaining contamination exists from the eligible discharge from 1988.

Release of petroleum hydrocarbons is confirmed at the Site based on the investigations described in this report. LFR concluded that at least two releases occurred at the Site based on the presence and concentrations of chemicals of concern and the environmental forensic evaluation that estimated the degree of weathering and timing of the newer release. The environmental forensic evaluation concluded that in addition to the 1988 release, there was a second release at the Site that occurred less than five years ago.

LFR was not able to conclusively determine whether there is any remaining contamination at the Site associated with the petroleum hydrocarbon release documented in the initial DNF filed on November 29, 1988. As both releases occurred relatively close to one another, even if low levels of residual groundwater contamination remained from the original release, it would be masked by a new release.

The timing of the second release is consistent with the compliance history summarized in Section 2.1. According to the Annual Report submitted by GSI on March12, 1996, the concentrations of BTEX constituents and other petroleum hydrocarbons analyzed were below laboratory MDLs in groundwater samples collected from all the monitoring wells sampled at the Site (Table 1). These analytical results are in contrast to the significant amount of free product discovered in monitoring well MW-3, and the elevated concentrations of petroleum hydrocarbons measured in the monitoring wells at the Site between March and April 2007, and subsequently measured in MW-5 during this investigation (Table 1).

Based on the data available, LFR concludes that the contamination at the Site is predominantly due to the most recent gasoline release near the tank pit east of the dispenser island. Because it has been estimated that the release occurred less than five years ago, the Site is not eligible under the EDI Program.

Notes:

Concentrations in micrograms per liter
Chapter 62-777, Florida Administrative Code, cleanup target levels are displayed in shaded cells.
BOLD = concentration exceeds GCTL
BOLD = concentration exceeds NADC
< RL = less than reporting limits

BDL = below detection limits
BTEX = benzene, toluene, ethylbenzene, and total xylenes
EDB = ethylene dibromide
EPT = Enviro-Pro-Tech
GCTL = groundwater cleanup target level
GSI = Groundwater Technology Government Service, Inc.
I = analyte detected between MDL and PQL
MTBE = methyl tertiary-butyl ether
NA = not analyzed
NADC = natural attenuation default concentration
TRPH = total recoverable petroleum hydrocarbon
U = analyte below laboratory method detection limit (MDL)
V = analyte was detected in sample and associated method blank
* = well sampled with bailer below free product
** = free product sampled from well
*** = dissolved lead

Table 2
Site Compliance Chronology
Glen's Service Center, North E Street
Pensacola, Florida

No.	Date	Type	From	To	Subject	Remarks
1	11/29/88	DNF	Owner	FDEP Dist	Discharge Notification Form	Initial DNF for discovery of discharge by odor or visible signs **November 29, 1988**. Products were leaded and unleaded gasoline according to form.
2	11/29/88	EDI NF	Owner	FDEP Dist	Early Detection Incentive Notification Form	Included with DNF to determine EDI eligibility.
3	12/15/88	Letter	FDEP TAL	Owner	Certification of tanks	Request to certify tanks per program requirements.
4	2/2/89	Checklist/Form	FDEP Dist	FDEP Dist	Super Act Site Inspection	Well survey; one public well within 1/4 mile of site.
5	7/6/89	Tank Inspection	FDEP Dist	FDEP Dist	EDI Eligibility Inspection	Apparent discharge near the dispensers based on repair history and slight gasoline odor in soil.
6	7/6/89	Checklist/Form	FDEP TAL	Owner	EDI Eligibility Approval	Approved eligibility for EDI **July 6, 1989**.
7	9/12/89	FDEP Order	FDEP TAL	Owner	Certification of Eligibility	Order approving EDI eligibility **September 12, 1989**.
8	6/10/92	Letter	County	Owner	EDI assignment of contractor	Groundwater Technology GovernmentServices, Inc., assigned assessment and cleanup responsibilities.
9	7/20/93	Report	Owner Contractor	County	Contamination Assessment Report	CAR dated **July 20, 1993**.
10	9/14/93	Letter	County	Owner Contractor	Contamination Assessment Report Approval	Approved CAR dated July 20, 1993, and requested a Remedial Action Plan be prepared.
11	4/20/94	Report	Owner Contractor	County	Limited Scope Remedial Action Plan	LSRAP dated **April 20, 1994**.
12	5/2/94	Checklist/Form	Owner Contractor	FDEP TAL	RAP Checklist	RAP Checklist; no free product; SVE; no groundwater treatment.
13	5/9/94	Letter	County	Owner Contractor	RAP Approval	Approved RAP dated **April 20, 1994**.
14	1/15/95	Checklist/Form	Owner	FDEP TAL	Small Business/Corporation Affidavit	Affirms that the owner meets the requirements.
15	2/7/96	Report	Owner Contractor	County	Final RAP Drawings	As-built construction drawings.
16	3/12/96	Report	Owner Contractor	County	Annual Report - Limited Scope Remedial Action Plan - Monitoring Only	Recommended NFA
17	10/15/96	Letter	County	FDEP TAL	Site Rehabilitation Completion Report (SRCR)	County recommended site rehabilitation complete to FDEP.
18	10/15/96	Letter	County	Owner Contractor	Site Rehabilitation Completion Report (SRCR)	Reported NFA; required proper abandonment of monitoring wells.
19	10/25/96	Letter	FDEP TAL	Owner	Site Rehabilitation Completion Report (SRCR)	Concurrence with Escambia County that cleanup had been achieved per 62-770.730(5) and (9) existing at the time.
20	5/18/98	Checklist/Form	County	FDEP TAL	Super Act Site Inspection	Identified two public wells within 1/2 mile of site.

Table 2
Site Compliance Chronology
Glen's Service Center, North E Street
Pensacola, Florida

No.	Date	Type	From	To	Subject	Remarks
21	8/10/98	Letter	Owner Contractor	County	Enviro-Pro-Tech, Inc., Letter Report	Letter Report documenting decomissioning of remedial system and abandonment of 12 monitoring wells.
22	9/14/98	Letter	County	Owner Contractor	Approval letter	FDOH/Escambia County approved an Enviro-Pro-Tech, Inc., letter report dated **August 10, 1998**.
23	7/31/06	Tank Inspection	County	County	Storage Tank Facility Annual Site Inspection Report	Two USTs reported in compliance.
24	9/11/06	Letter	Owner Contractor	County	Rescission of SRCO dated Oct. 25, 1996	Enviro-Pro-Tech, Inc. requested rescission of SRCO date Oct.25, 1996, due to odors or visible signs of petroleum in the vicinity of the fueling dispensers on **March 28 and 29, 2006**.
25	10/16/06	FDEP Order	FDEP TAL	Owner	Rescission of SRCO dated Oct. 25, 1996	Noted that soil exceeded SCTLs for leachability; rescinded prior SRCO. Required supplemental assessment/remediation. Indicated that site remained eligible under prior EDI program for **Nov. 29, 1988** discharge. Site score was 60 and funding was available.
26	2/13/07	Letter	Owner Contractor	FDEP TAL	Work Commencement	Notice that direct push and well installation will start the following week.
27	2/19/07	Checklist/Form	FDEP Contractor	FDEP TAL	Checklist and field notes	Oversight observations by Team 5 WRS of owner contractor's field work to install additional wells.
28	3/23/07	Letter	FDEP TAL	Owner Contractor	Interim deliverable	Interim deliverable was satisfactory.
29	3/23/07	Letter	Owner Contractor	FDEP TAL	Notification	Notification of field work reschedule
30	3/28/07	E-mail	Owner Contractor	FDEP TAL	Notification	Notified Team 5 (WRS)
31	4/4/07	Checklist/Form	FDEP Contractor	FDEP TAL	Field Work 4/3 - 4/4/07	Oversight observations by Team 5 WRS of owner contractor's field work to install additional wells.
32	4/5/07	Letter	Owner Contractor	FDEP TAL	Notification	Notification of field work (groundwater sampling) to begin April 13, 2007.
33	4/24/07	Letter	FDEP TAL	Owner Contractor	Interim deliverable	Interim deliverable was satisfactory.
34	7/9/07	Letter	FDEP TAL	Owner	SSAR June 26, 2007	Comments on SSAR June 26, 2007
35	7/27/07	Letter	Owner Contractor	FDEP TAL	Response to Comments	Response to comments on the Supplemental Site Assessment Report (SSAR).
36	8/3/07	Letter	FDEP TAL	Owner Contractor	Final deliverable	Supplemental Site Assessment Report (SSAR) and Response to Comments (RTC) are satisfactory.
37	11/19/07	Tank Inspection	County	County	Storage Tank Facility Annual Site Inspection Report	Two USTs reported in compliance.

Notes:

Samples analyzed by Alpha Analytical, Mansfield, MA
Bold = detected above laboratory method detection limits (MDL)
J = detected between MDL and practical quantitation limit (equivalent to "I" symbol)
U = compound was not detected above the MDL
B = found in associated blank as well as sample
E = estimated value, exceeds the upper limit of calibration (equivalent to "L" symbol)

Laboratory Analytical Reports

ANALYTICAL REPORT

Prepared for:
LFR
3382 Capital Circle, N.E.
Tallahassee, FL 32308-1568

Project:	Glen's Service Centers, Inc
ETR:	0803033
Report Date:	April 24, 2008

Certifications and Accreditations
Massachusetts M-MA030
Connecticut PH-0141
New Hampshire 2206
Rhode Island LAO00289
New Jersey MA015
Maine MA0030
New York 11627
Louisiana 03090
Florida E87814
Pennsylvania 68-02089
Army Corps of Engineers
Department of the Navy

This report shall not be reproduced except in full, without written approval from the laboratory.

Sample ID Cross Reference

Client: **LFR** Lab Code: **MA00030**

Project: **Glen's Service Centers, Inc** ETR: **0803033**

Lab Sample ID	Client Sample ID
0803033-01	MW-5
0803033-02	MW-3 (Free Product)
0803033-03	Regular Unleaded
0803033-04	Mid-Grade Unleaded

CASE NARRATIVE
Alpha Analytical

ETR: 0803033
Project: Glen's Service Centers, Inc.

All analyses were performed according to the Alpha Analytical quality assurance program and documented Standard Operating Procedures (SOPs). The analytical results contained in this report were performed within holding time, and with appropriate quality control measures, except where noted. A summary of all state and federal accreditations is provided within this report. Blank correction of results is not performed in the laboratory for any parameter. Alpha Analytical certifies that the test results within meet all of the requirements of NELAC, for all NELAC accredited parameters.

PIANO Volatiles by GC/MS

1. Method blanks VS031808B08 (aqueous) and VO040208B05 (product) each have target compounds detected below the reporting limit and "J" qualified. Field sample results are "B" qualified if these compounds are also present in the field samples.

2. The laboratory control sample and laboratory control sample duplicate (VS031808LCS02 and VS031808LCSD02) have the compound Tertiary butanol recovered above the upper recovery limit of 130%, at 230% and 190%, respectively. Tertiary butanol was not detected in the associated sample MW-5 (0803033-01).

3. Due to a high percent deviation in the calibration verification standard associated with sample Regular Unleaded (0803033-03), the compound Tridecane has been qualified with a "J" flag. This is to denote an estimated value with a potential high bias.

Organic Lead by GC/MS

1. All quality control parameters met the specified criteria.

Ethanol by GC/MS

1. All quality control parameters met the specified criteria.

TPH GRO and Ethanol for Water Sample

1. THP GRO and Ethanol analyses on sample MW-5 (0803033-01 & L0803254-01) was performed at Alpha Analytical's Westboro, MA laboratory.

The enclosed results of analyses are representative of the samples as received by the laboratory. Alpha Analytical makes no representations or certifications as to the method of sample collection, sample identification, or transporting/handling procedures used prior to the receipt of samples by Alpha Analytical. To the best of my knowledge, the information contained in this report is accurate and complete. For any questions regarding this report, please contact the signatory below at 508-822-9300.

GLOSSARY OF TERMS AND SYMBOLS

REF	Reference number in which test method may be found.
METHOD	Method number by which analysis was performed.
ID	Initials of the analyst.
ND	Not detected in comparison to the reported detection limit.
NI	Not Ignitable.
ug/cart	Micrograms per Cartridge.
H	The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

CASE NARRATIVE
Alpha Analytical

ETR: 0804006
Project: Glen's Service Centers, Inc.

All analyses were performed according to the Alpha Analytical quality assurance program and documented Standard Operating Procedures (SOPs). The analytical results contained in this report were performed within holding time, and with appropriate quality control measures, except where noted. A summary of all state and federal accreditations is provided within this report. Blank correction of results is not performed in the laboratory for any parameter. Alpha Analytical certifies that the test results within meet all of the requirements of NELAC, for all NELAC accredited parameters.

PIANO Volatiles by GC/MS

1. Method blank VO040208B05 has target compounds detected below the reporting limit and "J" qualified. Field sample results are "B" qualified if these compounds are also present in the field samples.

2. Due to a high percent deviation in the calibration verification standard associated with sample MW-3 (0804006-01), the compound Tridecane has been qualified with a "J" flag. This is to denote an estimated value with a potential high bias.

3. Sample MW-3 (0804006-01), initially analyzed at a 1:10 dilution, required re-analysis at 1:500 dilution due to target compounds detected above the calibration range of the analytical instrument. The diluted analysis is only quantified for those compounds which were detected over the calibration range in the initial analysis.

Ethanol by GC/MS

1. All quality control parameters met the specified criteria.

The enclosed results of analyses are representative of the samples as received by the laboratory. Alpha Analytical makes no representations or certifications as to the method of sample collection, sample identification, or transporting/handling procedures used prior to the receipt of samples by Alpha Analytical. To the best of my knowledge, the information contained in this report is accurate and complete. For any questions regarding this report, please contact the signatory below at 508-822-9300.

ALL SECTIONS BELOW MUST BE COMPLETED

Were samples shipped? (Yes, FedEx) / UPS / Other:_____
No, Alpha Analytical Courier pick-up / Hand delivered

Is bill of lading retained? Yes, Tracking #: Attached
No, Unavailable / NA

Number of coolers received for this project delivery: 1

Indicate cooler temperature upon opening (if multiple coolers, record all temps):

Note: If all coolers are 2-6°C, use one checklist, if NOT, use separate checklists and note all samples received *above* 6°C.

Cooler 1:
Temperature(s) taken from: 3° IR Gun, 3° Temp. Blank, / NA

Were samples received on ice? (Yes) / No

Chain-of-Custody present? (Yes) / No
Complete? (Yes) / No

Custody seals present on Cooler? (Yes) / No
on Bottles? Yes / (No)
Intact? (Yes) / No / NA
Note: Affix custody seals to back of this page.

Were sample containers intact? (Yes) / No If No, list samples: →

Did VOA/VPH waters contain headspace (>5mm)? Yes / No / (NA) If Yes, list samples: →

Were 5035 VOA soils, or VPH soils, *covered* with MeOH? Yes / No / (NA)
If No, list samples: →

Was a sufficient amount of sample received for each test indicated on the COC?
(Yes) / No If No, list samples: →

If chemical preservation is appropriate -
Were samples field preserved? Yes / No / (NA)
☐C=HCl ☐ M=MeOH ☐ S=H_2SO4
☐H=NaOH ☐ N=HNO_3 ☐ Other:_____ ☐ U= Unknown

Preservation (pH) verified at lab for *EVERY* bottle? (Not: VOA / VPH / Sulfide)
YES: <2 or >12 (CN) or NO (NA)
If No, why?:

Were samples received within hold time? (Yes) / No If No, list samples: →

Discrepancy between samples rec'd & COC ? Yes / (No) If Yes, list samples: →

Was the Project Manager notified of any other problems? Yes / No / NA

Re: LFR, Inc. Project Code: 004-06202-00 (EGC Reference No. 81003)

Dear Mr. O'Sullivan,

At the request of LFR, Inc. (LFR) on behalf of the Florida Department of Environmental Protection, Environmental Geochemistry Consulting (EGC) performed fingerprinting evaluation of analytical data for one (1) non-aqueous phase liquid (NAPL) sample from monitoring well MW-3, one (1) groundwater sample from monitoring well MW-5, and two (2) reference fuel samples from Regular and Mid-Grade gasoline dispensers collected at the Glen's Service Station site (Site) located at 2101 North "E" Street in Pensacola, Florida. These samples were originally collected on March 6, 2008. However, due to the insufficient amount on NAPL in sample MW-3, it was re-samples on March 28, 2008. The samples were analyzed by Alpha Woods Hole Laboratory according to the documented SOPs; analytical results were submitted to LFR on April 24, 2008. The Site plan with historic and current sampling locations is shown in Figure 1 (monitoring wells sampled for this study are marked in red).

The purpose of this investigation is to identify fuel type of the hydrocarbon contamination at the subject Site and estimate its residence time in the subsurface. The analysis of samples consisted of TPH(g) and ethanol by EPA Method 8015B (groundwater sample only), ethanol by GC/MS for NAPL and dispensed gasoline samples and lead alkyl speciation by EPA Method 8270 Modified (NAPL sample only). In addition, all samples were analyzed for gasoline range hydrocarbons utilizing the PIANO methodology. Analytical results, applicable quality assurance/quality control (QA/QC) data, and a copy of the chain-of-custody records are provided in the laboratory analytical data report.

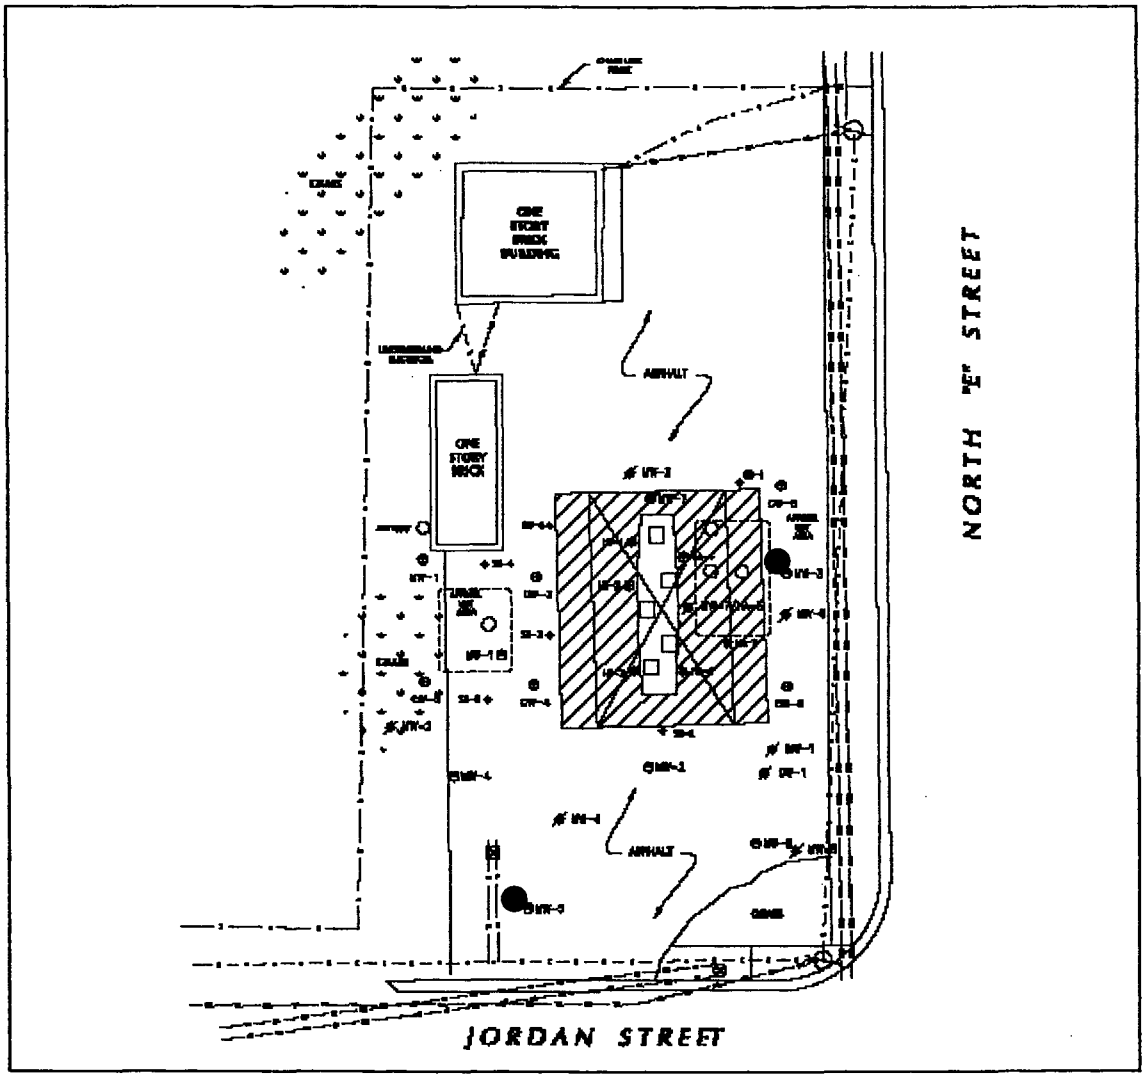

Figure 1: Site plan and field sampling locations

In this letter report, the chemical data obtained were evaluated with the following objectives:

- assess the fuel type of hydrocarbon contamination at the Site
- evaluate degree of the contaminant weathering
- estimate the age of hydrocarbon product release(s)

The following provides an outline of the relevant site information, a brief discussion of the analytical results and the conclusions reached.

Site Background

The Site houses a retail gasoline station and convenient store underlain by the unconfined Sand-and-Gravel Aquifer. The top of the water table is encountered at depth approximately 30 ft below surface. Groundwater in the aquifer flows to the south-southeast at the velocity of approximately 31.83 ft/year [1]. In 1971, four steel USTs were installed in two locations at the Site. Two 4,000 gal gasoline USTs, and one 1,000 gal diesel UST are located at the east side of the dispenser island; one 6,000 gal gasoline UST is located south of the facility building (Figure 1). In October 1994, the diesel UST and one of the 4,000 gal gasoline UST were closed in-place.

According to the Site compliance chronology compiled by LFR, initial Discharge Notification Form (DNF) was filed in November 1988. The follow up tank inspection identified an apparent discharge near the dispensers. The 1993 site assessment documented organic vapor concentrations exceeding 10,000 ppm in soil boring HA-5/MW-7. Additional soil analyses demonstrated high concentration of volatile aromatic hydrocarbons, benzene, toluene, ethylbenzene, and xylenes (BTEX) typical of gasoline contamination. The highest level of total BTEX concentration was measured in boring HA-5 between 6 ft (1,722,500 ppb) and 20 ft (11,620 ppb) below the surface. Dissolved BTEX groundwater plume was reaching the southern property line of the Site.

Concurrently with the closure of two tanks in the eastern UST area, a soil vapor extraction system (SVE) was started at the Site. The system operated until No Further Action status was approved in October 1996. In 1998, the remedial system was decommissioned and monitoring wells abandoned. However, during the March 2006 system investigation for insurance purposes, petroleum-impacted soil was discovered beneath the eastern side of the eastern tank pit. The

[1] *Contaminant Assessment Report. Glen's Service Station, Inc., 2101 North E Street, Pensacola, Escambia County, Florida. Fac. ID # 17862673. Groundwater Technology Inc. July 20, 1993.*

follow-up supplemental site assessment activities revealed groundwater contamination with dissolved hydrocarbons above cleanup target levels. In addition, one of the newly installed monitoring wells, MW-3, contained approximately 1.8 ft of NAPL floating on the top of groundwater. Shortly after the NAPL detection, both operational tanks passed the requested tightness test. For the following eight weeks, NAPL was gauged and removed weekly using a Teflon hand bailer. During this period, the thickness of NAPL changed between 0.1 ft and 1.43 ft, with total of approximately 56 gal of NAPL/water mixture removed [2].

Fingerprinting Methodology

Each hydrocarbon product is standardized by a set of physical and chemical properties, which are often used for product characterization in environmental samples. EGC's fingerprinting approach for product-type identification is based on evaluation of the chemical composition of contaminants and pattern recognition analysis of the analytical data collected. Depending on the analytical technique(s) selected for the sample analysis, different chemical parameters can be used for data evaluation.

One of the major distinctions between refined fuels is the corresponding boiling range. The hydrocarbon constituents of gasoline span a range from n-C_3 to n-C_{13}, and are conventionally described in terms of the major classes of hydrocarbons: paraffins, isoparaffins, aromatics, naphthenes, and olefins (PIANO). Older formulations of gasoline typically contain alkyl lead additives, whereas modern, reformulated types often include oxygenated blending agents. Dissolved-phase gasoline contamination is typically characterized by elevated levels of volatile aromatic hydrocarbons, benzene, toluene, ethylbenzene and xylenes (BTEX), and in the case of modern gasoline, the presence of the performance-improving blending agents such as oxygenates. Middle distillate fuels such as kerosene and diesel generally span a range from n-C_8 to n-C_{26} and exhibit a unique distribution of the product-specific homologous series of hydrocarbons.

---

[2] *Supplemental Site Assessment and Free Product Recovery Report. Glen's Service Station, Inc., 2101 North E Street, Pensacola, Escambia County, Florida. Fac. ID # 17862673. Enviro-Pro-Tech, Inc. June 2007.*

Because gasoline is a complex, labile mixture, the composition of a fuel released into the environment begins to change almost immediately because of numerous biochemical and physical processes commonly termed "weathering". The three most recognized weathering processes are evaporation, dissolution (water-washing), and microbial degradation. The extent of weathering is a function of the corresponding process rates and the residence time in the environment.

Analytical Data Evaluation

NAPL sample

Results of the PIANO analysis presented in the laboratory analytical data report demonstrate that NAPL sample MW-3 contains hydrocarbon compounds typical of gasoline. The distribution of PIANO compounds in NAPL sample MW-3 exhibits noticeable similarities and differences with those for two reference gasoline samples collected from dispensers at the Glen's Station. For comparison purposes, distribution patterns of PIANO compounds in these three samples are shown in Figure 2. Each of the two reference gasoline distribution patterns is quite typical of modern unleaded gasoline containing varying levels of common gasoline blending stocks (e.g., alkylate, isomerate, and reformate) used to achieve both octane and vapor pressure requirements.

Both reference gasoline samples do not contain elevated concentrations of high-octane branched C_8-alkanes representing major components of alkylate blending stock. The difference in octane rating between the two gasoline formulations can be primarily attributed to different proportion of aromatic compounds-enriched reformate blending stock. In particular, the total concentration of volatile aromatic (BTEX) compounds in Mid-Grade reference gasoline (45.4 wt %) is significantly higher than in Regular gasoline (35.6 wt %). As is common practice, the vapor pressure of dispensed gasoline grades appears to have been (at least in part) controlled by the blending of an isomerate blending stock enriched in branched C_5- and C_6-hydrocarbons. A higher concentration of the most volatile C_5- and C_6-hydrocarbons in Mid-Grade reference gasoline (36.4 wt %) compared to that in Regular reference gasoline (29.1 wt %) indicates that a greater proportion of isomerate was used in the blending of Mid-Grade gasoline, whereas a greater proportion of a straight-run stock was used in the blending of Regular gasoline. Neither

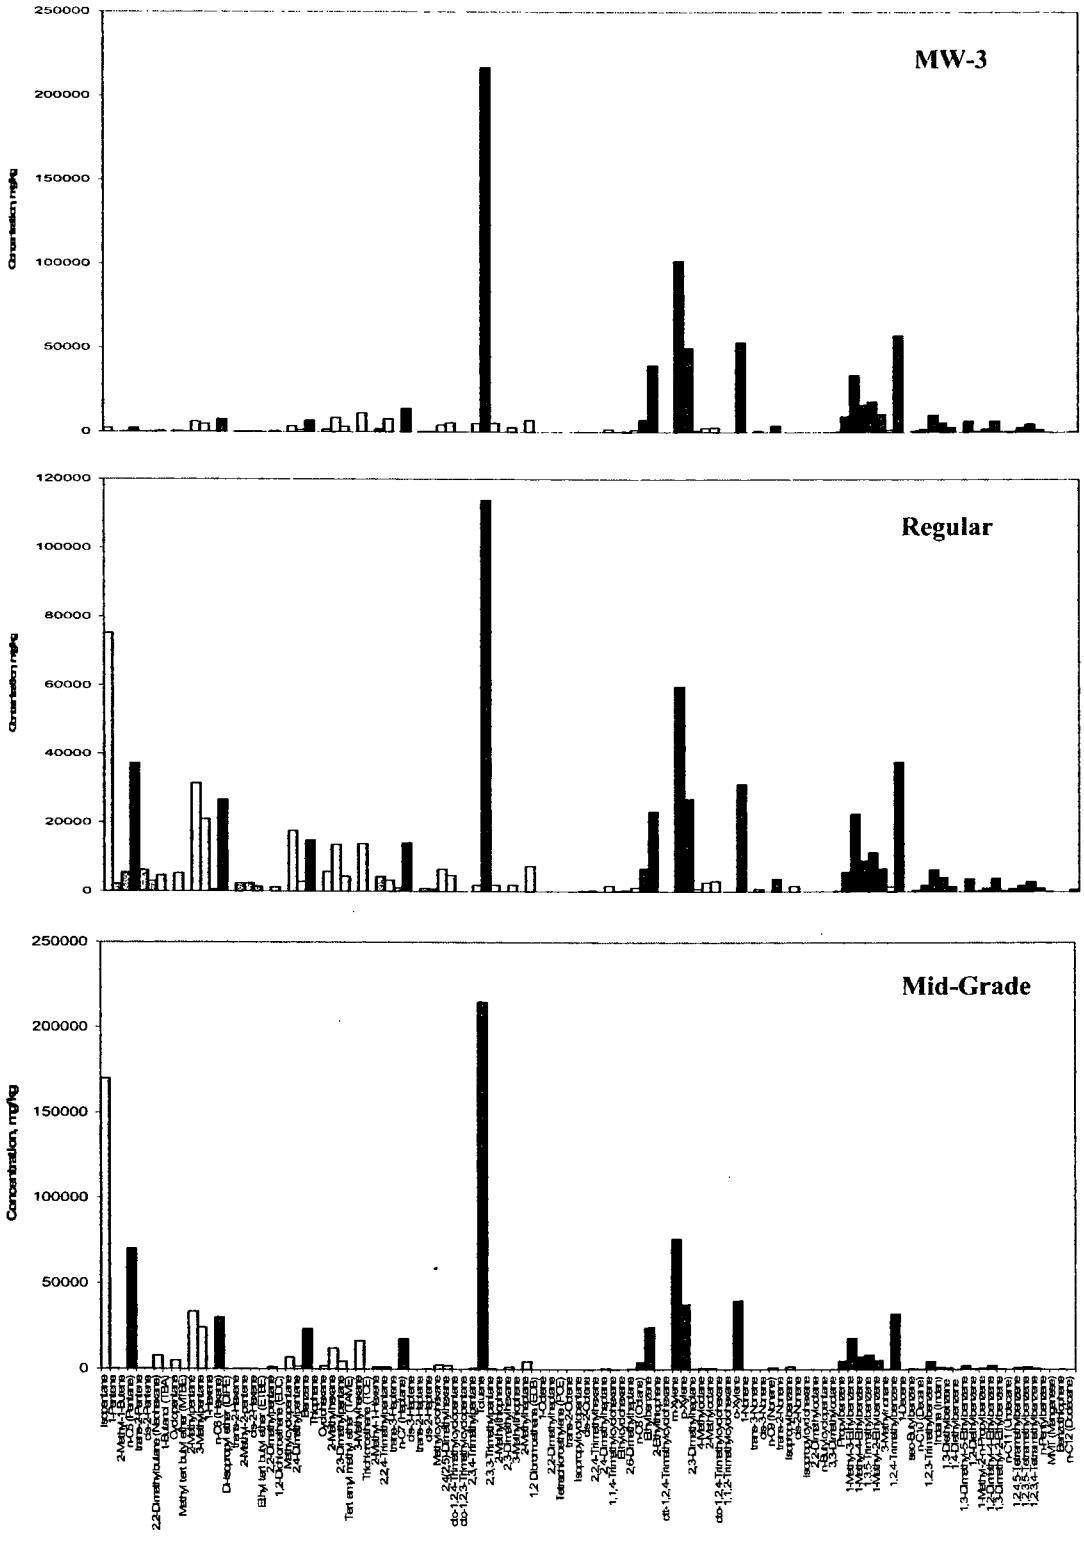

Figure 2: Distribution patterns of PIANO compounds in NAPL sample MW-3 and two reference dispensed gasoline samples, Regular and Mid-Grade
(paraffins, aromatics, olefins)

of reference gasoline samples contain oxygenates, which is consistent with Florida regulations that do not require sale of oxygenated gasoline formulations.

NAPL sample MW-3 does not contain lead alkyl additives or oxygenated blending agents. Compared to the referenced gasoline formulations, gasoline in NAPL sample MW-3 has lost significant amounts of its light-end components ($< C_6$). The rest of the chemical characteristics of this sample are most similar to those of the Mid-Grade reference gasoline. Depletion of the most-volatile hydrocarbons is indicative of a substantial evaporative weathering of the NAPL in sample MW-3. However, the sample is still enriched with BTEX compounds. Compared to the reference gasoline samples, only benzene, the most water-soluble BTEX component, shows some minor loses due to water washing. The rest of the BTEX compounds exhibit concentrations similar to those in Mid-Grade reference gasoline. Considering that only a thin layer of NAPL (< 2 in) was present in monitoring well MW-3 at the time of sampling, high concentration of BTEX compounds and their relative amounts suggests that the NAPL has not undergone a prolonged exposure in the subsurface environment. Typically, such degree of weathering occurs within a time period of less than 5 years after gasoline release. It should be noted, that remedial activities such as well purging and NAPL bailing increase the rate of weathering, which can explain a relatively high degree of evaporative alteration of NAPL sample MW-3.

Groundwater sample

Analytical results presented in the laboratory analytical data report demonstrate that a relatively low TPH (g) concentration of 230 µg/L was measured in groundwater sample MW-5. Most of the sample contamination is represented by BTEX (182.3 µg/L) and MTBE (27.9 µg/L). Low levels of the contaminant concentrations do not allow for evaluating of its potential sources, however both components would be consistent with a gasoline contamination. According to the previously reported analytical results [2], in March-May 2007 groundwater downgradient from well MW-3 contained elevated concentration of gasoline-related contamination with the highest BTEX level of 1,670 µg/L in well MW-5 and the highest MTBE level of 1,200 µg/L in well MW-6. The level and distribution of the individual BTEX components are consistent with being

related to the NAPL in monitoring well MW-3 that was first discovered in March 2007. A relatively high concentration of MTBE indicates that groundwater at the Site was affected by oxygenated gasoline.

Though no areas of Florida are currently designated by EPA as non-attainment area for air pollution such that they are subject of oxygenated fuel programs, cross-contamination of fuels in the distribution system is quite a common phenomenon. Based on the regional fuel distribution network, it is practically impossible for distribution companies that are involved in multistate commerce with large volumes of fuel to segregate oxygenated fuel that may be mandated in one area from being mixed with non-oxygenated fuel designated for other areas.

Summary

Based on the interpretation of analytical results, it is possible to make following conclusions regarding the hydrocarbon contamination at the Glen's Service Station site located at 2101 North "E" Street in Pensacola, Florida:

- Results of PIANO analysis demonstrate that NAPL sample MW-3 represent a weathered unleaded gasoline fuel similar (but not necessarily identical) to that currently sold at the Site as Mid-Grade gasoline.

- A minor degree of weathering by water-washing is indicative of a relatively recent release of gasoline comprising the NAPL in monitoring well MW-3. Typically, such degree of weathering occurs within a time period of less than 5 years after gasoline release.

- A relatively advanced degree of the NAPL alteration by evaporation is most probably related to the remedial activities such as well purging and bailing, that increase the rate of gasoline weathering.

- The Site gasoline-related groundwater contamination is consistent with being resulted predominantly from the NAPL accumulated in monitoring well MW-3.

We appreciate the opportunity to provide you with our consulting services. Please feel free to contact me with any further questions or concerns.

Very truly yours,

RE: Post Active Remediation Monitoring (PARM) Groundwater Sampling Event at Smart Fill No. 1 at (Glen's Super Service Station) at 2101 North "E" Street, Pensacola, Escambia County, FDEP Facility I.D. No. 17/8626732

Dear Ms. Heffernan:

Enclosed is the Post Active Remediation Monitoring Report (PARM) for Smart Fill No. 1 (Glen's Super Service Station (FDEP No. 17/8626732) at 2101 North "E" Street in Pensacola, Florida prepared by GLM & Associates, Inc. (GLM). Groundwater samples have been collected in accordance with the Florida Department of Environmental Protection's (FDEP') Standard Operating Procedures and GLM's discussions with the Florida Department of Health in Escambia County. **Figure 1** shows the location of the Subject Site on a General Location Map of the area. **Figure 2** shows the Subject Site and immediate area.

Monitoring well MW-2R was sampled for Benzene, Toluene, Ethyl Benzene and Xylenes (BTEX) and Methyl Tert Butyl Ether (MTBE) by EPA method 8260 and Polynuclear Aromatic Hydrocarbons (PAHs) on May 19, 2024. For the first time since GLM restarted Post Active Remediation Monitoring at Smart Fill No. 1 in September of 2022, Total Xylenes were found below Groundwater Cleanup Target Levels (GCTLs) in MW-2R. Other than a minor hit of Naphthalene below GCTLs, no other parameters were found above laboratory method detection limits in MW-2R.

As noted in our previous report, Monitoring wells MW-3R and MW-16 originally included in Post Active Remediation Monitoring had previously displayed Total Xylenes in excess of GCTLs in November of 2017, but showed no parameters in excess of Groundwater Cleanup Target Levels (GCTLs) in sampling events conducted in September of 2022, March of 2023 and September of 2023 and were eliminated from future groundwater sampling events. As noted in previous reports, GLM was tasked with sampling MW-20 in a previous sampling event, but could not locate the well. GLM utilized a metal detector in an attempt to locate MW-20, but still could not find the well.

It appears MW-20 may have been paved over. **Figure 3** shows the individual values of Benzene, Toluene, Ethyl Benzene, Xylenes and Methyl Tert Butyl Ether (MTBE) in Monitoring Well MW-2R. **Table 1** shows historical groundwater results for selected parameters. **Table 2** shows groundwater results for Benzene, Toluene, Ethyl Benzene, Xylenes (BTEX) and Methyl Tert Butyl Ether (MTBE) from the May 2024 Groundwater Sampling Event and the five (5) previous groundwater sampling events. **Appendix A** contains Eurofin's Laboratory report along with GLM's Groundwater sampling log and field notes.

GLM collected water level readings from monitoring wells MW-3R, MW-6 and MW-16 on June 5, 2024. The well caps were removed and the aquifer was allowed to equilibrate before water level measurements were collected. The monitoring wells at Smart Fill No. 1 (Glens Super Service Station) are completed in the surficial zone of the Sand and Gravel aquifer. GLM referenced Top of Casing Elevations contained in AMEX Foster Wheeler's PARM Report and Historical Groundwater Elevation Table (**Table 3**). Based on review of AMEX Foster Wheeler's previous reports and their statements on historical groundwater flow direction, groundwater flow has been consistently to the southeast or based on GLM's review of their flow maps south/southeast. Based on review of Amex Foster Wheeler's historical groundwater elevation table (**Table 3**), groundwater table elevations were found near their highest levels in September of 2022 with the only exception being May of 2014 in which groundwater elevations at the Subject Site were found to be higher. Groundwater elevations dropped an average of 6 foot (ft) in the surficial zone of the Sand and Gravel Aquifer from the sampling event in October of 2022 to the groundwater sampling event conducted in May of 2024. Based on groundwater elevation data in MW-3R, MW-6 and MW-16 collected on June 5, 2024, groundwater flow was found towards the southeast. The slope of the hydraulic gradient as measured from MW-3R to MW-6 on September of 2023 was 0.0060 ft/ft.
The slope of the hydraulic gradient as measured from MW-3R to MW-6 on June 5, 2024 was 0.0042 ft/ft. **Figure 4** is a groundwater contour map showing groundwater elevation data collected on June 5, 2024. **Table 4** shows top of casing elevation, water level measurements and groundwater elevation data collected in the recent past and during the June 5, 2024 gauging event.

This is the forth PARM Groundwater Sampling Event conducted by GLM. No parameters exceeded GCTLs in MW-2R in May of 2024 for the first time since GLM initiated Post Active Remediation Monitoring in September of 2022. GLM recommends continuing semi-annual PARM groundwater sampling of MW-2R.

Sincerely,

GLM & Associates, Inc.

Geoffrey L. Maddux, P.G.

FDEP Groundwater Cleanup Target Levels		1*	40*	30*	20*	20	14	28	28
FDEP Natural Attenuation Default Concentration		100	400	300	200	200	140	140	140

Notes:
(U) Indicates that the compound was analyzed for but not detected.
(I) Indicates the reported value is between the laboratory method detection limit (mdl) and the laboratory practical quantitation limit (pql).
(D) Indicates data reported from a dilution and or multiple dilutions (for example: D100 = 1:100, D200 = 1:200, D500 = 1:500, D1 = 1:1000, D2 = 1:2000).
Numbers in **Bold** indicate concentrations above the FDEP Groundwater Cleanup Target Level.
* As provided in Chapter 62-520 F.A.C.
NA Indicates that the sample was Not Analyzed for that parameter.
FP Indicates that Free Product was encountered in the monitoring well.
** Indicates monitoring well was destroyed during excavation activities.

FDEP Groundwater Cleanup Target Levels		1*	40*	30*	20*	20	14	28	28
FDEP Natural Attenuation Default Concentration		100	400	300	200	200	140	140	140

Notes:
(U) Indicates that the compound was analyzed for but not detected.
(I) Indicates the reported value is between the laboratory method detection limit (mdl) and the laboratory practical quantitation limit (pql).
(D) Indicates data reported from a dilution and or multiple dilutions (for example: D100 = 1:100, D200 = 1:200, D500 = 1:500, D1 = 1:1000, D2 = 1:2000).
Numbers in **Bold** indicate concentrations above the FDEP Groundwater Cleanup Target Level.
* As provided in Chapter 62-520 F.A.C.
NA Indicates that the sample was Not Analyzed for that parameter.
FP Indicates that Free Product was encountered in the monitoring well.
** Indicates monitoring well was destroyed during excavation activities.

ANALYTICAL REPORT

PREPARED FOR

Attn: Geoff Maddux
GLM
PO BOX 5339
Navarre, Florida 32566
Generated 5/28/2024 11:55:31 AM

JOB DESCRIPTION

Smart Fill #1 - Pensacola, FL

JOB NUMBER

400-256274-1

Eurofins Pensacola
3355 McLemore Drive
Pensacola FL 32514

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Definitions/Glossary

Client: GLM
Job ID: 400-256274-1
Project/Site: Smart Fill #1 - Pensacola, FL

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J1	Estimated value; value may not be accurate. Surrogate recovery outside of criteria.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
400-256274-1

Receipt
The sample was received on 5/20/2024 2:00 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.2º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E SIM: Three surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: MW2R (400-256274-1) and (MB 400-672508/1-A). These results have been reported and qualified.

Method 8270E SIM: The continuing calibration verification (CCV) associated with batch 400-672542 recovered above the upper control limit for Acenaphthylene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E SIM: The method blank for preparation batch 400-672508 and analytical batch 400-672542 contained Benzo[b]fluoranthene, Benzo[g,h,i]perylene, Benzo[k]fluoranthene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8270E SIM: Internal standard responses were outside of acceptance limits for the following sample: MW2R (400-256274-1). The ISTD fails low which would indicate a biased high result for the associated compounds. Since the sample is non-detect for the associated compounds a re-run is unnecessary.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	0.2°C IR8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

March 31, 1988

Mr. Robert V. Kriegel
Florida Department of Environmental Regulation
Northwest District
160 Governmental Center
Pensacola, Florida 32501

Dear Bob:

I appreciate you meeting with us Tuesday to discuss substation herbicide. The meeting was very productive and we were pleased to see your willingness to offer technical support during our upcoming work.

To summarize our discussion, Gulf Power Company up until the late 1960's used a commercially available herbicide in electrical substations for weed control. The product went under tradenames such as Anaconda Weed Killer, but the primary active ingredient was arsenic trioxide. The product was advertised as being insoluable and providing long lasting weed control. The material has remained in place in the substation sites, in some cases for 20-30 years and has remained an effective herbicide.

Upon the advent of stringent hazardous waste regulations, we began a testing program to determine if the soil treated with the herbicide would be classified as a hazardous waste if removed from the site. The testing showed that if representative samples are taken, that the material in all likelihood will not be a hazardous waste. Of course this determination would have to be confirmed on a case by case basis.

Further testing was conducted to determine any impacts on groundwater from the herbicide. Two substation sites were selected which represented some of the highest surface concentrations of the herbicide at all of the approximately 120 sites at which the material was used. One site was in Bonifay,

Florida and the other in Lynn Haven, Florida. Groundwater monitor wells were installed around both sites and samples taken and analyzed for arsenic. Groundwater beneath the Bonifay site showed no impact from the surface concentrations, but the Lynn Haven testing showed detectable concentrations of arsenic above expected background. Confirmation testing was conducted and the results indicated the same elevated readings.

Upon confirmation of the Lynn Haven results, we immediately obtained samples from all four of the City of Lynn Haven supply wells and from five tap locations in the system. The testing showed arsenic to not be present in the Lynn Haven water supply.

We have developed an action plan to respond to the Lynn Haven site. The plan involves continued monitoring of the Lynn Haven water system, the completion of a more detailed contamination assessment for the site and a determination of whatever remedial action is necessary to ensure compliance with Florida's groundwater quality standards. As I stated Tuesday, we will be contacting your staff concerning the technical aspects of the program and would welcome any comments or suggestions they might have.

We are also moving forward on evaluating all other sites where the arsenic herbicide was used, including groundwater sampling from any existing wells in proximity to the sites. The results of that sampling along with a more definitive long range action plan will be submitted to you within the next two weeks.

Attached to this letter are: 1) Bonifay groundwater testing results, 2) Lynn Haven testing results, 3) Lynn Haven water system testing results, and 4) the Lynn Haven action plan. If any questions or comments arise do not hesitate to call Mike Oaks or myself.

Sincerely,

L. Ray Harry
Supervisor of Environmental Affairs

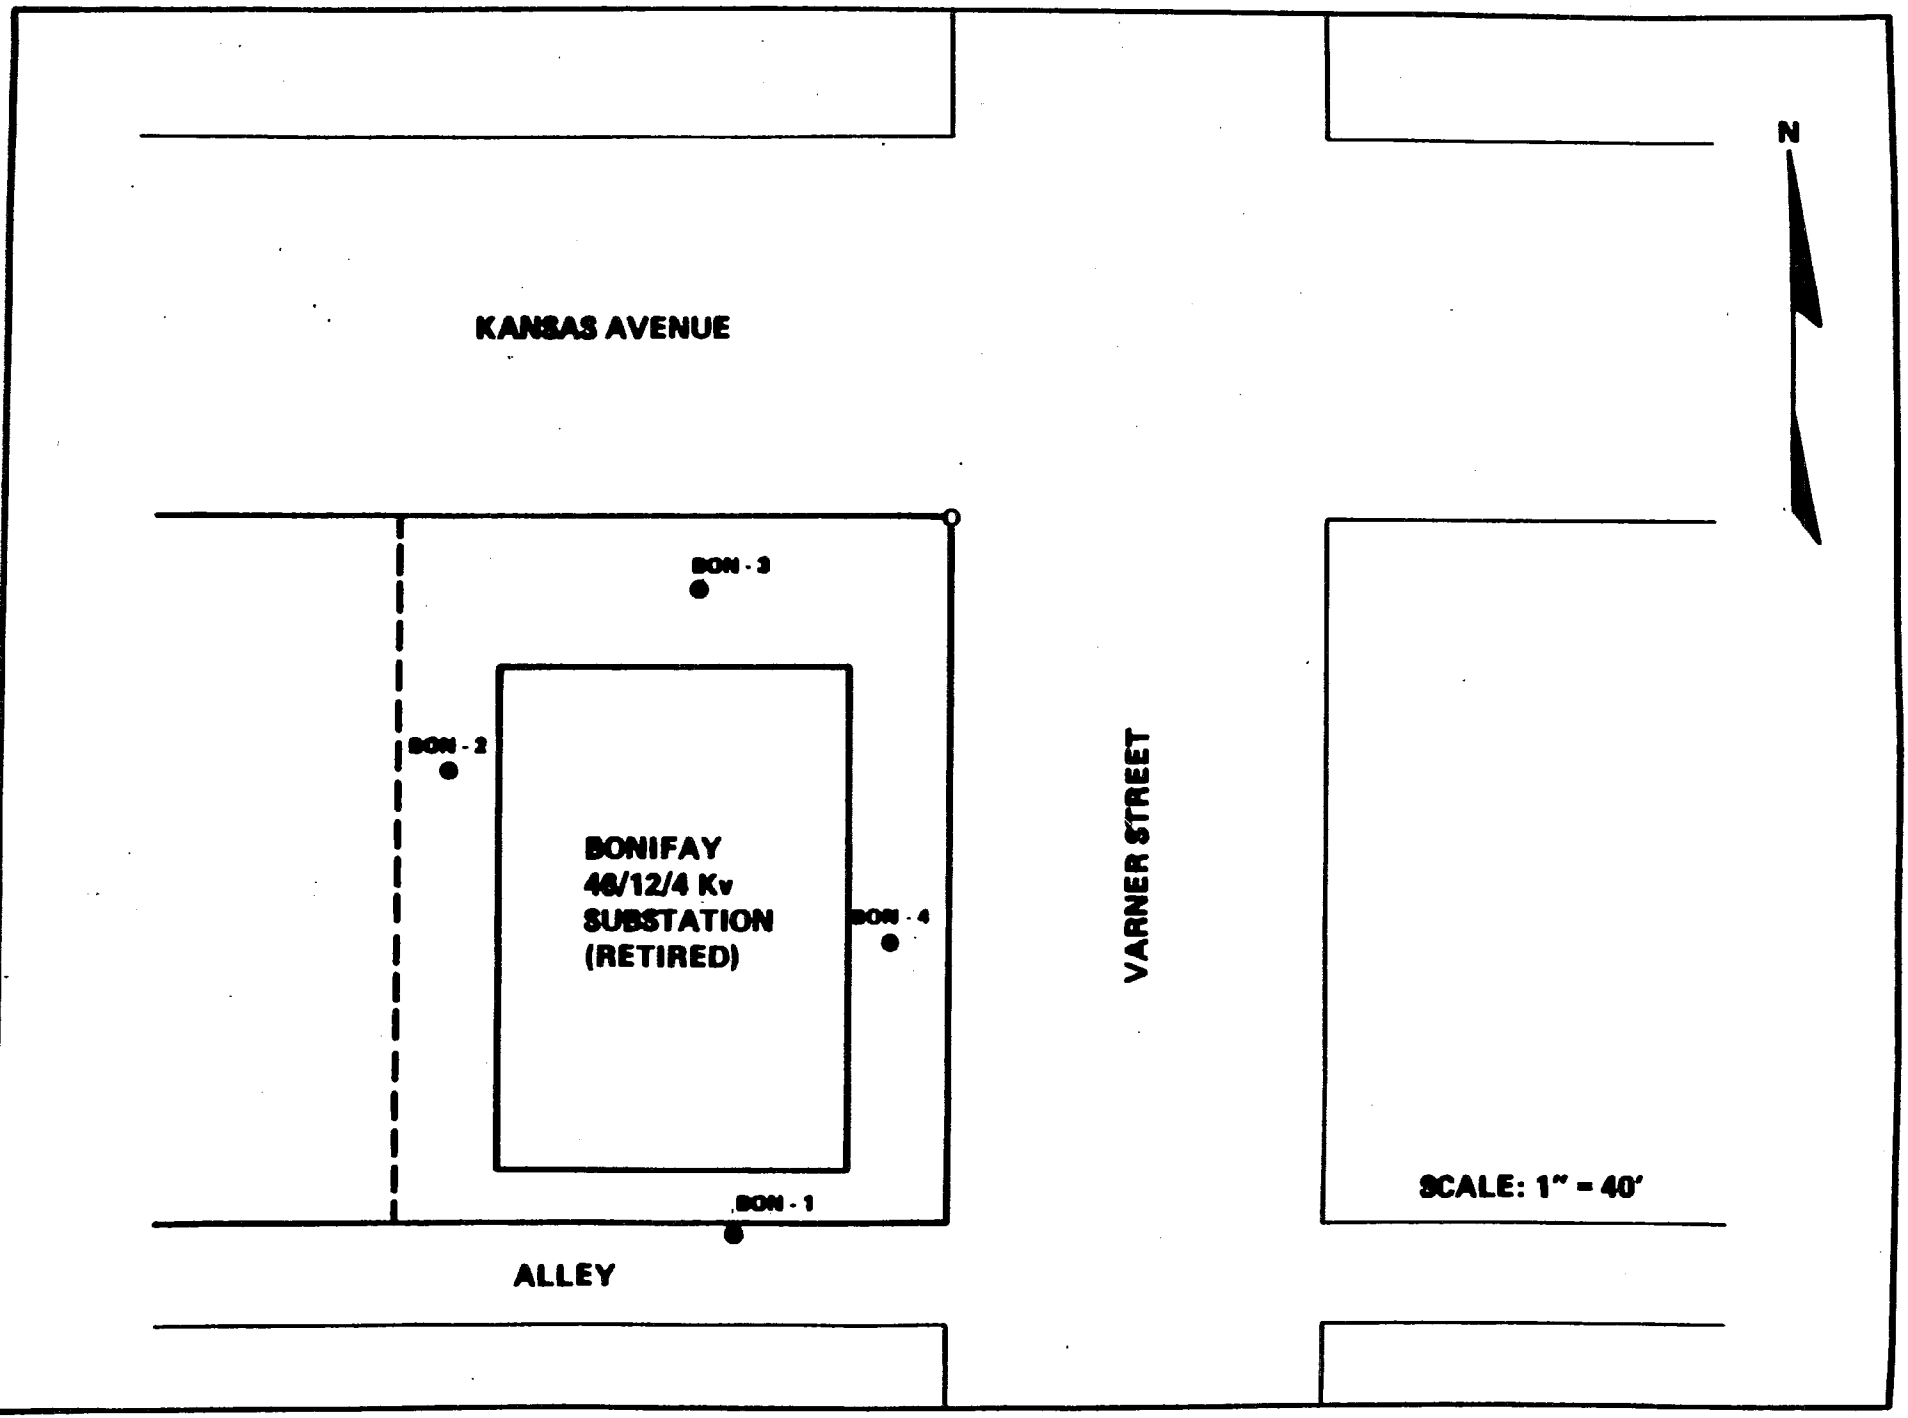
BONIFAY

Summary of Results -- Total Arsenic (ppb) in Unfiltered, Field-Preserved Samples.
(Analytical methods: SCS-Hydride gen./AA, Alabama-Hydride gen./AA for levels < 50 ppb and ICP for levels > 50 ppb, Georgia-Hydride gen./ICP).

Site/ Well No.	SCS Mean	SCS 95% Conf.	SCS 99% Conf.	Alabama	Georgia
Bonifay					
1	3.0				
2	1.5	0.5-2.5	0.1-2.9	0.9	1.0
3	1.0				
4	6.5	4.7-8.3	4.0-9.0	1.7*	4.0

* Outside SCS's 99% confidence band -- probably due to differing sensitivities of analytical methods used by laboratories involved (e.g., hydride generation/AA detection limit ≃ 1 ppb, ICP detection limit ≃ 50 ppb).



Location of Monitoring Wells, Bonifay Substation

LYNN HAVEN ACTION PLAN

I. Monitor total arsenic content of groundwater from City of Lynn Haven well no. 1, quarterly for one year and then annually for 5 years.

II. Contamination Assessment

Determine/perform the following:

A. Review of available geologic information for local area, e.g., well log data for City of Lynn Haven well no. 1.

B. Areal dimensions of the plume and direction of plume movement in relationship to drinking water supplies, using grid of driven well points on Gulf Power Company property.

C. Vertical extent of plume in groundwater down to a depth of about 40 feet using multilevel sampler installations.

D. Undisturbed soil sampling and testing and/or pumping test(s) to measure the surficial aquifer's hydraulic conductivity.

E. Groundwater modeling to estimate the rate of migration of the plume.

F. Concentration contour mapping for present distribution of total arsenic in groundwater, and likely future distributions using groundwater modeling, taking into account plume dilution, plume retardation by geochemical reactions and removal of the source.

G. Present or possible future effects on groundwater from City of Lynn Haven well no. 1 and other groundwater users, if present, using information from A-F above.

III. Take appropriate remedial action to achieve compliance. Options include but not limited to removal of source, paving and containing source etc.

IV. Evaluate disposal options for any excavated material.

July 2, 1990

Mr. William E. Kellenberger
Department of Environmental Regulation
Northwest District
160 Governmental Center
Pensacola, Florida 32501

Dear Bill:

SUBSTATION INVESTIGATION PLAN REFINEMENTS

On June 14, 1990, I sent you a Substation Investigation Plan for Gulf Power Company's substations subject to Consent Order 88-0471. Contained in the Plan were two investigation threshold criteria which were tentative at the time of submittal as indicated by a question mark on the flow chart.

The Drastic analysis criterion should be revised based on actual field data results from Gulf Power's Lynn Haven and Bonifay substation sites. The grain size analysis criterion may require future adjustment based on further information from the Bonifay site which we hope to collect in the near future. Please refer to the attached memo from Mr. Jim Redwine P.G., for the technical details of the proposed refinements.

If you should have any questions, or need to further discuss these items please do not hesitate to contact me.

Sincerely,

Michael F. Oaks

Post Office Box 1151
Pensacola, FL 32520-1151

Dear Mike:

We would like to take this opportunity to refine two items on the substation contamination evaluation plan and associated flow chart. As you know, we submitted the plan under a tight regulatory deadline, and used published data or site-specific information in our files to develop the flow chart. We would now like to fine-tune two items:

1. Grain-size criterion - Based on our Lynn Haven and Bonifay work, we know that clay-rich surficial materials prevent the vertical migration of arsenic leachate to the water table. In Phase I of the plan, we proposed using at least 50% of the sample passing the no. 200 sieve as one screening criterion. This criterion is based on actual grain-size analyses from Lynn Haven and visual classification of Bonifay soils. We need to collect two soil samples from the Bonifay site and perform a grain-size analysis to verify this criterion. We could collect these samples while performing other work for Gulf Power later this summer.

2. DRASTIC values - In Phase II of the substation contamination assessment plan, we proposed using a value of 130 as a screening criterion. This value is based on published information from Lake County, Florida. We have now had the opportunity to perform a DRASTIC analysis on both the Lynn Haven and Bonifay sites. We calculated a value of 134 for Bonifay and 168 for Lynn Haven. We would like to propose, therefore, that the DRASTIC criterion be changed from 130 to 150.

Thank you very much for the opportunity to perform this important work for Gulf Power Company. Please call me at extension 7303 if you have questions or require additional information.

Sincerely,

James C. Redwine

Gulf Substation Investigations

Mr. Mike Oaks
Environmental Affairs
Gulf Power Company
500 Bayfront Parkway
P. O. Box 1151
Pensacola, FL 32520-1151

Dear Mike:

We have carefully reviewed the FDER's memos of September 27 and August 28 and the associated flow chart. We generally agree with the FDER, with the following modifications:

1. Per our October 5 conversation with Mr. Bill Kellenberger, it is premature to commit to PCAPs and PCARs at the end of the Phase II and Phase III investigations at the present time. As shown on the attached flow chart, we propose determining appropriate action after the Phase II and Phase III investigations are complete.

2. Per your July 2 memo to Bill Kellenberger, we propose modifying the DRASTIC criterion from 130 to 150. The 130 value was based on published data for Lake County. We subsequently calculated a value of 134 for the Bonifay site and 168 for Lynn Haven. Since Bonifay showed no ground-water contamination, we propose that the DRASTIC criterion be modified from 130 to 150.

3. As proposed in your July 2 memo to Bill Kellenberger, we have now completed grain-size analyses for the Bonifay site (attached). One sample contained 38% fines (-200 sieve), and the other contained 25% fines. We therefore propose changing the grain-size screening criterion in Phase I from 50% to 40% passing the No. 200 sieve.

We would like to propose the following schedule for the Phase II DRASTIC analysis, the Phase IB tasks, and the PCAP presentation for each Priority I site. We can complete the Phase II DRASTIC analysis and the Phase IB tasks (surface runoff and boring locations) by January 31, 1991. Drilling and testing will then be required prior to PCAP preparation. As noted in the September 27 memo from Mr. Thomas Moody, we propose submitting a generic PCAP with sections that include information from all

20 Priority I sites, including any modifications to the generic plan based on site-specific information. We can complete this composite PCAP by June 28, 1991.

Mike, thank you very much for the opportunity to assist Gulf Power Company in this very important work. Please call me at ext. 7303 if you have questions or require additional information.

Sincerely,

James C. Redwine

Mr. J. A. Tucker
Environmental Affairs
Gulf Power Company
500 Bayfront Parkway
Pensacola, Florida 32520

Dear Mr. Tucker:

This is in response to your August 28 request for clarification of our August 25 correspondence regarding the soil cleanup levels at your substation sites.

Our August 25 letter responded to the following points cited in your July 21 letter:

1. A 10 mg/kg guidance SRL for the upper two feet of impacted soils outside Gulf Power substation property boundaries at Priority 1 sites regardless of a substation's location in a "residential or "industrial" setting, with the further understanding that soil treatment options like capping, soil stabilization or other remediation alternatives could allow for arsenic impacted soils to be left in place at levels greater than 10 mg/kg.

2. Allowance for Gulf Power site-specific development of SRL's for arsenic in soils within substation property boundaries based upon the potential threat to groundwater, with the further understanding that the soil treatment options or alternatives (capping, soil stabilization) may be used.

With regard to impacted soil outside your property lines (1. above); we are both governed by the Consent Order. Sites may be closed on the basis of having met the Consent Order criterion of leachability, but we cannot approve any other cleanup standard other than the level which has been determined based on protection of public health.

With regard to impacted soil within substation property boundaries (2. above); we have no objection to your developing site-specific SRL's based upon the potential threat to groundwater. Guidance for determining these SRL's was included with our August 25 correspondence.

We hope this clarifies our position. Any questions you may have regarding this site should be directed to Art Leskowich, at (904) 444-8360 in Pensacola.

Sincerely,

Thomas W. Moody

August 28, 1995

Mr. Mike Kennedy
Florida Department of Environmental Protection
Northwest District
160 Governmental Center
Pensacola, FL 32501-5794

Dear Mike:

This is to confirm our request for clarification of the August 25 correspondence of Bobby Cooley, in particular the closing sentence of the first paragraph on Page 2. Our concern is that this statement intends to require a site-specific risk assessment for all sites within the substation investigation in accordance with the Department's referenced risk assessment guidelines. While we do agree that a risk assessment may be a viable alternative within the scope of the consent order at some sites, this should not necessarily be required at all sites.

If it is the Department's intent and the correspondence is construed to mean that the consent order will be the guideline for current and future activities within the scope of the project, then our concerns as mentioned above are eliminated.

We appreciate your consideration in obtaining clarification of these issues. If you have any questions or need additional information, please contact me at 444-6551.

Cordially,

Tuck Tucker

August 25, 1995

Mr. Jim Vick
Environmental Affairs
Gulf Power Company
Post Office Box 1151
Pensacola, Florida 32520-1151

Dear Mr. Vick:

This is in response to your July 21 letter to Mr. Moody concerning the discussions we have had regarding cleanup levels for arsenic-contaminated soil.

As you know, remedial investigations and actions at Gulf Power's substation sites are currently under way through the provisions of Consent Order 88-0471. That Consent Order provides for preliminary surface and ground water contamination assessments at the substations where arsenic trioxide was applied as a herbicide and for full assessments, with remedial action as warranted, at those sites where surface or ground water contamination is confirmed.

The remedial standard for soil at these latter sites is stated in the Consent Order as a leachability level, so that the soil will not act as a continuing source of ground water contamination. In the six years since the execution of the Consent Order, however, the Department has developed health-based soil remedial criteria based upon direct human exposure to contaminants in soil, intake from incidental ingestion, dermal contact and inhalation. The calculated exposure criteria for arsenic are 0.7 mg/kg for a residential scenario and 3 mg/kg for an industrial scenario. These levels usually apply to the upper two feet of soil, with leachability levels appropriate beneath that. Enclosed are the calculations and their basis.

Contamination assessment reports which you have submitted to date show elevated soil levels of arsenic outside some substation property lines. Many of Gulf Power's substations are located, according to your report submittals, in residential neighborhoods and others are in commercial/ industrial neighborhoods.

Your letter requests that we set a soil remediation level of 10 mg/kg outside the substation property line, regardless of the site setting, with provisions for leaving even higher levels in place and a site-specific determination of levels inside the substation property. We concur with the latter approach to soil inside the property boundaries, with site-specific studies done in accordance with the enclosed guidelines for risk assessment.

We will accept any voluntary level of remediation lower than the standard set in the Consent Order but, on the other hand, we do not feel it would be appropriate to modify the Consent Order to formally establish any cleanup standard outside the property boundaries other than the levels which have been determined based on protection to the public health. As stated in our June 6 meeting, we agree that Gulf Power is not bound to remediate to any level other than as stated in the Consent Order and, therefore, see no need for the formal administrative hearing to which you refer. We understand that Gulf Power is reluctant to commit to a much greater level of remediation to attain guidance levels which are not adopted by Department rule, particularly outside its property lines.

If you have any questions, please do not hesitate to call me.

Sincerely,

Bobby A. Cooley
Director of District Management

RE: Status of the Substation Projects in the 1st Quarter 2008

Dear Ms. Shea:

Gulf Power Company submits this letter as an update of the activities that are being conducted at various substation sites within our service area. A summary of the status of each project is found below. For reference, I've provided new information in italics:

Alford substation: Source abatement was initiated at this site on November 29, 2004 and completed on December 7, 2004. A total of approximately 3800 tons of impacted soil was removed and transported to the Springhill Landfill for disposal. A summary of the excavation activities will be included as part of the contamination assessment report (CAR) that is currently being prepared for this site. This report will be submitted to the Department upon completion. *Gulf Power has no additional new information for this substation.*

Altha substation: The Altha site, pursuant to the Department approved Remedial Action Plan, is on an annual groundwater monitoring schedule. Source abatement was initiated on May 16, 2001 and completed on May 24, 2001. A total of 2,122 tons of impacted soil was removed and transported to the Springhill Landfill for proper disposal. *The seventh annual groundwater monitoring summary report was submitted in March 2008 as required. On May 2, 2008, Gulf received a Conditional Site Rehabilitation Order for the substation as a result of a restrictive covenant recorded with the deed for the property.*

Amerada Hess substation: Under cover letter dated March 28, 2005 the Department denied an unconditional site rehabilitation order for this site because soil arsenic concentrations were above the Soil Cleanup Target Levels (SCTLs) listed in 62-777 F.A.C. Gulf responded to the Department in an April 2005 letter which outlined Gulf's concern and opposition to the use SCTLs as soil standards at our substation sites and Gulf's expectation that the Department continue to issue unconditional SRCOs as has occurred under similar circumstances in the past. Gulf will continue to remove, to the extent practical, soils with arsenic concentrations above the 10 mg/kg guidance level at our substations. *In response to a letter dated March 18, 2008, Gulf collected additional off site soil samples for analysis. The results have not been received to date.*

Bayou Marcus substation: Contamination assessment activities at this substation began in August 2003. A CAR was submitted to the Department in October 2004. Gulf Power received the Department's responses to the CAR requesting additional soil sampling and responded to the Department under a June 22, 2006 cover. Gulf Power received the Department's December 15,

RECEIVED
MAY 29 2008
NORTHWEST FLORIDA

2006 response to Gulf's letter of June 22, 2006 and responded to the Department under a January 22, 2007 letter. The annual monitoring report was submitted in August 2007. *The DEP responded that institutional measures (fencing of Gulf property) will be sufficient and once this is completed, an SRCO will be issued. No further groundwater monitoring is warranted.*

Beach Haven substation: In June 2007, Remedial Effectiveness Report 9 was submitted to the Department. *As of May 2008, over 128 million gallons of impacted groundwater had been treated at the facility and re-injected into the shallow aquifer. Additional wells were installed in February and May 2008 to enhance the existing groundwater treatment system. The installation of the recovery/injection well piping began the week of May 19, 2008*

Beal Parkway substation:. In September 2005, a monitoring only plan was submitted to the Department for approval. In November 2006, Gulf Power received an approval from the Department to use 50 ppb as opposed to a 10 ppb target level. *Gulf submitted the Second Annual Natural Attenuation Report in March 2008.*

Belmont and G substation: Excavation of arsenic-impacted soils began at this retired substation on April 4, 2002. A Soil Excavation Report was submitted to the Department on January 9, 2003. On February 12, 2003 we received a No Further Action for soils at this site. Groundwater sampling was conducted at this site in September and October of 2004, and a CAR was submitted to the Department in November 2004 requesting a Site Rehabilitation Completion Order. Gulf Power has no additional new information for this substation.

Byrneville Substation – *Gulf received an SRCO for this site in April 2008.*

Century substation: Contamination assessment activities at this substation began in 2003. However, because accessibility issues encountered during the installation of a monitoring well, this assessment was placed on hold. The accessibility issues were resolved allowing the contamination assessment to be completed. Gulf Power conducted source abatement at this substation in June, July and November 2007. *The CAR and excavation report were completed and submitted to the Department in April 2008.*

Defuniak Springs Substation: On April 11th though April 18th 2001, a total of 1665.67 tons of impacted soils were removed from this site and properly disposed of at the Springhill Landfill. In December 2001 we received a No Further Action for soils to a depth of 5-1/2 feet bls. A full CAR was submitted to the Department in October 2003 requesting a Site Rehabilitation Completion Order. Additional excavation activities began on May 3 and ended on May 11, 2005, and all soils containing arsenic above the 10 mg/kg guidance concentration were removed. Approximately 1400 tons of soil was transported to the Springhill Landfill. In April, Gulf requested the Department provide written confirmation that this site has met and is in compliance with the requirements of Consent Order 88-0471. Gulf Power is awaiting response from the Department.

Ellyson Field: *Gulf received an SRCO for this site in November 2007.*

Ft. Walton Beach substation: The treatment system is currently operational and, *as of May 2008, over 230 million gallons* of impacted groundwater have been treated. The treatment system is effective in reducing levels of contaminants to below the drinking water standards. Monitoring of the wells are showing decreasing trends with respect to arsenic. In 2006, reporting was reduced to annual by the Department. Gulf Power submitted the annual report March 9, 2007.

An addendum to this report addressing the Department's questions was submitted in September 2007. *Five additional recovery wells were installed in November and December to tie into the horizontal well. In March 2008, the annual monitoring report was submitted.*

Graceville substation: In November 2003 approximately 3600 tons of impacted soils were removed from the retired portion of the substation and properly disposed of at the Springhill Regional Landfill. Gulf Power is investigating additional excavation at the site and will report to the department after completion of the investigation and excavation activities.

Holmes Creek substation: A CAR was submitted to the Department for the Holmes Creek substation site in December 2005. The Department requested additional information on the Holmes Creek CAR under a May 11, 2006 cover. Gulf Power submitted the additional information as an addendum to the CAR on September 5, 2006. Gulf Power addressed the comments from the Department's site visit. Gulf met with the Department in December 2007 to discuss further comments and activities. *A letter dated May 1, 2008, from the DEP requested additional assessment activities.*

Honeysuckle substation: *Gulf received an SRCO for this site in November 2007.*

Live Oak substation: *Gulf received an SRCO for this site in October 2007.*

Long Point substation: A partial excavation was initiated at this site on December 9, 2004, with a total of approximately 2100 tons of impacted soil removed and transported to the Springhill Landfill for disposal. Additional soil sampling will be required to determine the horizontal extent of arsenic in the soil above the 10 mg/kg guidance concentration prior to the conclusion of excavation activities at this site. The remaining impacted soils were excavated at this site in July and August 2006. Gulf Power sampled several adjacent property owners' irrigation wells and discovered elevated concentrations of arsenic in several of these irrigation water wells. Gulf Power offered and the owner accepted to use potable water as the supply for the irrigation system at Gulf's expense. The irrigation system has been hooked up to potable water and ground water is no longer used by this property owner for irrigation. *A number of monitoring wells have been installed at the site but additional assessment activities are scheduled. The CAR is scheduled for completion by December 1, 2008.*

Lynn Haven substation: In July 2006, Gulf Power submitted the sixth post-remediation monitoring report for the retired Lynn Haven substation. The majority of the residual plume is within Gulf's property boundary and beneath 11th street. This site continues to be under a monitoring only status. *The ninth annual report is being prepared for submittal. On May 12 and 13, 2008, the ditches along 11th street were excavated. An excavation report is also being prepared*

Miramar Beach substation: Three piezometers were installed at the Miramar Beach substation to determine groundwater flow direction. One piezometer was damaged and replaced in October 2007. *Sampling of private wells has been completed. Gulf has scheduled contamination assessment activities and a CAR will be submitted to the DEP by September 1, 2008.*

Molino Crossroads substation: The contamination assessment of this substation began on July 21, 2003. A CAR was submitted to the Department in August 2004, with additional information submitted in September 2004. From November 28 - December 23, 2005, approximately 5597

tons of soil containing arsenic in concentrations above the determined background level were removed from the property south of the substation and from areas outside of the substation fence. An Addendum to the Excavation Summary was submitted to the Department by the May 31, 2006 deadline. The Department responded to the Addendum in an August 23, 2006 letter requesting additional sampling. Gulf Power submitted the response in November 2006. *In November 2007, Gulf removed an area 20 by 20 feet wide and 4 feet, two inches deep in the area of MSCS-2. Confirmation sample contained 5.8 mg/kg arsenic, which is below the established background level. All soils outside the fence above the 7.5 mg/kg established background level have been removed. In a letter dated May 15, 2008, the DEP denied Gulf's recommendation for NFA because soils within the fence still contain arsenic above the 10 mg/kg.*

Monsanto substation: The second semi-annual sampling event was conducted in October and a report was submitted to the Department in December 2005. Because groundwater flow direction remained unchanged from that observed in previous sampling events, and arsenic was not detected in down-gradient wells above laboratory detection limits, annual sampling and reporting was requested for this site. The Department denied the request to go to annual monitoring. *The semi-annual report will be submitted to the Department in June 2008.*

North Hill substation: Excavation of this site occurred during the week of March 17th 2003. Soils were removed to varying depths and disposed of at the Springhill Regional Landfill. Additional soil and groundwater samples were collected in the 3rd quarter of 2004, and a CAR for this site, requesting a Site Rehabilitation Completion Order, was submitted to the Department in December 2004. Gulf Power is waiting for a response from the Department.

Ponce De Leon substation: The Ponce site was reduced from quarterly to semi-annual groundwater monitoring with annual reporting. Results indicate that arsenic levels continue to be below detection in the site's compliance wells. The seventh annual report was submitted in November 2007. *Semi-annual monitoring continues.*

Tyndall AFB substation: Partial excavation of this substation began on July 30, 2003. A total of 1847 tons of soil were excavated from within and around the active substation and transported to the Waste Management Springhill Landfill. The Department approved natural attenuation monitoring in June 2005, and the Third Annual Report was submitted in November 2006. The Fourth Annual Report was submitted in October 2007. *Monitoring continues.*

St. Andrews: On September 15, 1998, as requested by the Department, Gulf Power Company submitted an excavation summary report. On April 20, 1999, we received an NFA for soils at this site. The CAR for this site was submitted to the Department in September 2002, and a CAR Addendum was submitted to the Department on March 12, 2003. Based on the results of these documents and additional investigative activities, the St. Andrew's Monitoring Natural Attenuation (MNA) RAP for Groundwater was submitted in July 2003. MNA for this site was approved by the Department in September 2003. *The fifth annual MNA report was delivered to the Department in January 2008. In a letter dated April 10, 2008, the Department responded to the fifth annual report and requested supplemental assessment activities in response to elevated arsenic levels in one downgradient irrigation well. The site is currently being used as a demonstration site for phytoremediation. Over 300 poplar and willow trees were planted at the site in March 2008 to test the effect of the mass planting as a hydraulic barrier.*

West Hill: An excavation report was submitted to the Department on December 6, 1999 and No Further Action status for soils was granted on February 21, 2000. Groundwater samples were

collected in the 3rd quarter of 2004 and a CAR for this site was submitted to the Department in November 2004 requesting a Site Rehabilitation Completion Order. The Department stated its previous NFA was premature under a March 24, 2006 cover requesting a Addendum to the CAR. Gulf Power responded to the Department under a June 6, 2006 cover stating that groundwater sampling results of "non-detect" support the previous excavation activities and the NFA was and is appropriate. On March 2, 2007, Gulf Power responded to the Department's January 5, 2007 letter requesting further activities. Gulf stated that ground water sampling results of "non-detect" supports the previous excavation activities and the NFA was and is appropriate. *The Department has approved Gulf's request for NFA, pending engineering controls and supporting documents.*

We will continue to keep the Department updated with meetings and in writing on current activities at our sites. Gulf Power continues to maintain compliance with Consent Order 88-0471. If you have any questions regarding this information, please feel free to call me at 850-444-6551.

Sincerely,

Kevin Lee Beaty

RE: Status of the Substation Projects in the 2nd Quarter 2008

Dear Ms. Shea:

Gulf Power Company submits this letter as an update of the activities that are being conducted at various substation sites within our service area. A summary of the status of each project is found below. For reference, I've provided new information in italics:

Alford substation: Source abatement was initiated at this site on November 29, 2004 and completed on December 7, 2004. A total of approximately 3800 tons of impacted soil was removed and transported to the Springhill Landfill for disposal. A summary of the excavation activities will be included as part of the contamination assessment report (CAR) that is currently being prepared for this site. This report will be submitted to the Department upon completion. *Gulf Power has no additional new information for this substation.*

Altha substation: The Altha site, pursuant to the Department approved Remedial Action Plan, is on an annual groundwater monitoring schedule. Source abatement was initiated on May 16, 2001 and completed on May 24, 2001. A total of 2,122 tons of impacted soil was removed and transported to the Springhill Landfill for proper disposal. *The seventh annual groundwater monitoring summary report was submitted in March 2008 as required. On May 2, 2008, Gulf received a Conditional Site Rehabilitation Order for the substation as a result of a restrictive covenant recorded with the deed for the property.*

Amerada Hess substation: Under cover letter dated March 28, 2005 the Department denied an unconditional site rehabilitation order for this site because soil arsenic concentrations were above the Soil Cleanup Target Levels (SCTLs) listed in 62-777 F.A.C. Gulf responded to the Department in an April 2005 letter which outlined Gulf's concern and opposition to the use SCTLs as soil standards at our substation sites and Gulf's expectation that the Department continue to issue unconditional SRCOs as has occurred under similar circumstances in the past. Gulf will continue to remove, to the extent practical, soils with arsenic concentrations above the 10 mg/kg guidance level at our substations. *In response to a letter dated March 18, 2008, Gulf collected additional off site soil samples for analysis. Based on the results of the offsite sampling, Gulf has requested a No Further Action status for the site.*

Bayou Marcus substation: Contamination assessment activities at this substation began in August 2003. A CAR was submitted to the Department in October 2004. Gulf Power received the Department's responses to the CAR requesting additional soil sampling and res[illegible]ed to the

DEP

Department under a June 22, 2006 cover. Gulf Power received the Department's December 15, 2006 response to Gulf's letter of June 22, 2006 and responded to the Department under a January 22, 2007 letter. The annual monitoring report was submitted in August 2007. *The DEP responded that institutional measures (fencing of Gulf property) will be sufficient and once this is completed, an SRCO will be issued. No further groundwater monitoring is warranted.*

Beach Haven substation: In June 2007, Remedial Effectiveness Report 9 was submitted to the Department. *As of June 13, 2008, over 129,477,601million gallons of impacted groundwater has been treated at the facility and re-injected into the shallow aquifer. Additional wells were installed in February and May 2008 to enhance the existing groundwater treatment system. The installation of the recovery/injection well piping began the week of May 19, 2008. The upgraded system should be up and running by mid-July. The annual remedial effectiveness report was submitted in June 2008.*

Beal Parkway substation: In September 2005, a monitoring only plan was submitted to the Department for approval. In November 2006, Gulf Power received an approval from the Department to use 50 ppb as opposed to a 10 ppb target level. *Gulf submitted the Second Annual Natural Attenuation Report in March 2008.*

Belmont and G substation: Excavation of arsenic-impacted soils began at this retired substation on April 4, 2002. A Soil Excavation Report was submitted to the Department on January 9, 2003. On February 12, 2003 we received a No Further Action for soils at this site. Groundwater sampling was conducted at this site in September and October of 2004, and a CAR was submitted to the Department in November 2004 requesting a Site Rehabilitation Completion Order. *Gulf Power has no additional new information for this substation.*

Byrneville Substation – *Gulf received an SRCO for this site in April 2008.*

Century substation: Contamination assessment activities at this substation began in 2003. However, because accessibility issues encountered during the installation of a monitoring well, this assessment was placed on hold. The accessibility issues were resolved allowing the contamination assessment to be completed. Gulf Power conducted source abatement at this substation in June, July and November 2007. *The CAR and excavation report were completed in April 2008.*

Defuniak Springs Substation: On April 11th though April 18th 2001, a total of 1665.67 tons of impacted soils were removed from this site and properly disposed of at the Springhill Landfill. In December 2001 we received a No Further Action for soils to a depth of 5-1/2 feet bls. A full CAR was submitted to the Department in October 2003 requesting a Site Rehabilitation Completion Order. Additional excavation activities began on May 3 and ended on May 11, 2005, and all soils containing arsenic above the 10 mg/kg guidance concentration were removed. Approximately 1400 tons of soil was transported to the Springhill Landfill. In April, Gulf requested the Department provide written confirmation that this site has met and is in compliance with the requirements of Consent Order 88-0471. Gulf Power is awaiting response from the Department.

Ellyson Field: Gulf received an SRCO for this site in November 2007.

Ft. Walton Beach substation: The treatment system is currently operational and, *as of June 13, 2008, 233,106,400 gallons* of impacted groundwater have been treated. The treatment system is effective in reducing levels of contaminants to below the drinking water standards. Monitoring of the wells is showing decreasing trends with respect to arsenic. In 2006, reporting was reduced to annual by the Department. Gulf Power submitted the annual report March 9, 2007. An addendum to this report addressing the Department's questions was submitted in September 2007. Five additional recovery wells were installed in November and December 2007 to tie into the horizontal well. In March 2008, the annual monitoring report was submitted. *A new well was installed on Cary Avenue in the Unit 3 aquifer on May 7, as requested by FDEP. The first sampling result in June showed ND levels of arsenic in groundwater. Plans are progressing for installation of a deoxygenating system to improve arsenic removal. It is anticipated the system will be installed by September 2008.*

Graceville substation: In November 2003 approximately 3600 tons of impacted soils were removed from the retired portion of the substation and properly disposed of at the Springhill Regional Landfill. Gulf Power is investigating additional excavation at the site and will report to the department after completion of the investigation and excavation activities.

Holmes Creek substation: A CAR was submitted to the Department for the Holmes Creek substation site in December 2005. The Department requested additional information on the Holmes Creek CAR under a May 11, 2006 cover. Gulf Power submitted the additional information as an addendum to the CAR on September 5, 2006. Gulf Power addressed the comments from the Department's site visit. Gulf met with the Department in December 2007 to discuss further comments and activities. *A letter dated May 1, 2008, from the DEP requested additional assessment activities.*

Honeysuckle substation: Gulf received an SRCO for this site in November 2007.

Live Oak substation: Gulf received an SRCO for this site in October 2007.

Long Point substation: A partial excavation was initiated at this site on December 9, 2004, with a total of approximately 2100 tons of impacted soil removed and transported to the Springhill Landfill for disposal. Additional soil sampling will be required to determine the horizontal extent of arsenic in the soil above the 10 mg/kg guidance concentration prior to the conclusion of excavation activities at this site. The remaining impacted soils were excavated at this site in July and August 2006. Gulf Power sampled several adjacent property owners' irrigation wells and discovered elevated concentrations of arsenic in several of these irrigation water wells. Gulf Power offered and the owner accepted to use potable water as the supply for the irrigation system at Gulf's expense. The irrigation system has been hooked up to potable water and ground water is no longer used by this property owner for irrigation. *Monitoring wells have been installed at the site. The CAR is scheduled for completion by December 1, 2008.*

Lynn Haven substation: In July 2006, Gulf Power submitted the sixth post-remediation monitoring report for the retired Lynn Haven substation. The majority of the residual plume is within Gulf's property boundary and beneath 11th street. This site continues to be under a monitoring only status. *The Ninth annual report was submitted in May 2008. On May 12 and 13, 2008, the ditches along 11th street were excavated. An excavation report was submitted in June 2008.*

Miramar Beach substation: Three piezometers were installed at the Miramar Beach substation to determine groundwater flow direction. One piezometer was damaged and replaced in October 2007. *Sampling of private wells has been completed. Monitoring wells have been installed at the site and a CAR is scheduled for completion by September 1, 2008.*

Molino Crossroads substation: The contamination assessment of this substation began on July 21, 2003. A CAR was submitted to the Department in August 2004, with additional information submitted in September 2004. From November 28 - December 23, 2005, approximately 5597 tons of soil containing arsenic in concentrations above the determined background level were removed from the property south of the substation and from areas outside of the substation fence. An Addendum to the Excavation Summary was submitted to the Department by the May 31, 2006 deadline. The Department responded to the Addendum in an August 23, 2006 letter requesting additional sampling. Gulf Power submitted the response in November 2006. *In November 2007, Gulf removed an area 20 by 20 feet wide and 4 feet, two inches deep in the area of MSCS-2. Confirmation sample contained 5.8 mg/kg arsenic, which is below the established background level. All soils outside the fence above the 7.5 mg/kg established background level have been removed. In a letter dated May 15, 2008, the DEP denied Gulf's recommendation for NFA because soils within the fence still contain arsenic above the 10 mg/kg.*

Monsanto substation: The second semi-annual sampling event was conducted in October and a report was submitted to the Department in December 2005. Because groundwater flow direction remained unchanged from that observed in previous sampling events, and arsenic was not detected in down-gradient wells above laboratory detection limits, annual sampling and reporting was requested for this site in the semi-annual report submitted in December 2007. *The site will continue to be sampled semi-annually but annual reporting was approved. The next annual report will be submitted to the Department in December 2008.*

North Hill substation: Excavation of this site occurred during the week of March 17th 2003. Soils were removed to varying depths and disposed of at the Springhill Regional Landfill. Additional soil and groundwater samples were collected in the 3rd quarter of 2004, and a CAR for this site, requesting a Site Rehabilitation Completion Order, was submitted to the Department in December 2004. Gulf Power is waiting for a response from the Department.

Old Shalimar substation: *The retired Old Shalimar substation, located on Eglin Air Force Base, was excavated in June 2008. An excavation report is being prepared.*

Ponce De Leon substation: The Ponce site was reduced from quarterly to semi-annual groundwater monitoring with annual reporting. Results indicate that arsenic levels continue to be below detection in the site's compliance wells. The seventh annual report was submitted in November 2007. *Semi-annual monitoring continues.*

Tyndall AFB substation: Partial excavation of this substation began on July 30, 2003. A total of 1847 tons of soil were excavated from within and around the active substation and transported to the Waste Management Springhill Landfill. The Department approved natural attenuation monitoring in June 2005, and the Third Annual Report was submitted in November 2006. The Fourth Annual Report was submitted in October 2007. *Monitoring continues.*

St. Andrews: On September 15, 1998, as requested by the Department, Gulf Power Company submitted an excavation summary report. On April 20, 1999, we received an NFA for soils at this site. The CAR for this site was submitted to the Department in September 2002, and a CAR

Addendum was submitted to the Department on March 12, 2003. Based on the results of these documents and additional investigative activities, the St. Andrew's Monitoring Natural Attenuation (MNA) RAP for Groundwater was submitted in July 2003. MNA for this site was approved by the Department in September 2003. The fifth annual MNA report was delivered to the Department in January 2008. The site is currently being used as a demonstration site for phytoremediation. Over 300 poplar and willow trees were planted at the site in March 2008 to test the effect of the mass planting as a hydraulic barrier.

West Hill: An excavation report was submitted to the Department on December 6, 1999 and No Further Action status for soils was granted on February 21, 2000. Groundwater samples were collected in the 3rd quarter of 2004 and a CAR for this site was submitted to the Department in November 2004 requesting a Site Rehabilitation Completion Order. The Department stated its previous NFA was premature under a March 24, 2006 cover requesting a Addendum to the CAR. Gulf Power responded to the Department under a June 6, 2006 cover stating that groundwater sampling results of "non-detect" support the previous excavation activities and the NFA was and is appropriate. On March 2, 2007, Gulf Power responded to the Department's January 5, 2007 letter requesting further activities. Gulf stated that ground water sampling results of "non-detect" supports the previous excavation activities and the NFA was and is appropriate. *DEP has approved Gulf's request for NFA, pending engineering controls and supporting documents.*

We will continue to keep the Department updated with meetings and in writing on current activities at our sites. Gulf Power continues to maintain compliance with Consent Order 88-0471. If you have any questions regarding this information, please feel free to call me at 850-444-6551.

Pensacola, Florida 32501

RE: Status of the Substation Projects in the 3rd Quarter 2008

Dear Ms. Shea:

Gulf Power Company submits this letter as an update of the activities that are being conducted at various substation sites within our service area. A summary of the status of each project is found below. For reference, I've provided new information in italics:

Alford substation: Source abatement was initiated at this site on November 29, 2004 and completed on December 7, 2004. A total of approximately 3800 tons of impacted soil was removed and transported to the Springhill Landfill for disposal. A summary of the excavation activities will be included as part of the contamination assessment report (CAR) that is currently being prepared for this site. This report will be submitted to the Department upon completion. *Gulf Power has no additional new information for this substation.*

Altha substation: The Altha site, pursuant to the Department approved Remedial Action Plan, is on an annual groundwater monitoring schedule. Source abatement was initiated on May 16, 2001 and completed on May 24, 2001. A total of 2,122 tons of impacted soil was removed and transported to the Springhill Landfill for proper disposal. *The seventh annual groundwater monitoring summary report was submitted in March 2008 as required. On May 2, 2008, Gulf received a Conditional Site Rehabilitation Order for the substation as a result of a restrictive covenant recorded with the deed for the property.*

Amerada Hess substation: Under cover letter dated March 28, 2005 the Department denied an unconditional site rehabilitation order for this site because soil arsenic concentrations were above the Soil Cleanup Target Levels (SCTLs) listed in 62-777 F.A.C. Gulf responded to the Department in an April 2005 letter which outlined Gulf's concern and opposition to the use SCTLs as soil standards at our substation sites and Gulf's expectation that the Department continue to issue unconditional SRCOs as has occurred under similar circumstances in the past. Gulf will continue to remove, to the extent practical, soils with arsenic concentrations above the 10 mg/kg guidance level at our substations. *In response to a letter dated March 18, 2008, Gulf collected additional off site soil samples for analysis. Based on the results of the offsite sampling, Gulf has requested a No Further Action status for the site.*

Bayou Marcus substation: Contamination assessment activities at this substation began in August 2003. A CAR was submitted to the Department in October 2004. Gulf Power received the Department's responses to the CAR requesting additional soil sampling and responded to the

Department under a June 22, 2006 cover. Gulf Power received the Department's December 15, 2006 response to Gulf's letter of June 22, 2006 and responded to the Department under a January 22, 2007 letter. The annual monitoring report was submitted in August 2007. *The DEP is reviewing the restrictive covenant document, and once this is completed, an SRCO will be issued. No further groundwater monitoring is warranted.*

Beach Haven substation: In June 2007, Remedial Effectiveness Report 9 was submitted to the Department. *As of September, 2008, over 133,952,000million gallons of impacted groundwater has been treated at the facility and re-injected into the shallow aquifer. Additional wells were installed in February and May 2008 to enhance the existing groundwater treatment system. The installation of the recovery/injection well piping began the week of May 19, 2008. The upgraded system was fully operational as of July 21. The annual remedial effectiveness report was submitted in June 2008.*

Beal Parkway substation: In September 2005, a monitoring only plan was submitted to the Department for approval. In November 2006, Gulf Power received an approval from the Department to use 50 ppb as opposed to a 10 ppb target level. *Gulf submitted the Second Annual Natural Attenuation Report in March 2008.*

Belmont and G substation: Excavation of arsenic-impacted soils began at this retired substation on April 4, 2002. A Soil Excavation Report was submitted to the Department on January 9, 2003. On February 12, 2003 we received a No Further Action for soils at this site. Groundwater sampling was conducted at this site in September and October of 2004, and a CAR was submitted to the Department in November 2004 requesting a Site Rehabilitation Completion Order. *Gulf Power has no additional new information for this substation.*

Byrneville Substation – *Gulf received an SRCO for this site in April 2008.*

Century substation: Contamination assessment activities at this substation began in 2003. However, because accessibility issues encountered during the installation of a monitoring well, this assessment was placed on hold. The accessibility issues were resolved allowing the contamination assessment to be completed. Gulf Power conducted source abatement at this substation in June, July and November 2007. *The CAR and excavation report were completed in April 2008.*

Defuniak Springs Substation: On April 11th though April 18th 2001, a total of 1665.67 tons of impacted soils were removed from this site and properly disposed of at the Springhill Landfill. In December 2001 we received a No Further Action for soils to a depth of 5-1/2 feet bls. A full CAR was submitted to the Department in October 2003 requesting a Site Rehabilitation Completion Order. Additional excavation activities began on May 3 and ended on May 11, 2005, and all soils containing arsenic above the 10 mg/kg guidance concentration were removed. Approximately 1400 tons of soil was transported to the Springhill Landfill. *In April, Gulf requested the Department provide written confirmation that this site has met and is in compliance with the requirements of Consent Order 88-0471. Gulf Power is awaiting response from the Department. A Restrictive Covenant is currently being drafted.*

East Pensacola Heights: *The retired substation was excavated in early September 2008. An excavation report is being prepared.*

Ellyson Field: Gulf received an SRCO for this site in November 2007.

Ft. Walton Beach substation: The treatment system is currently operational and, *as ofmid-September, 2008, over 238,000,000 gallons* of impacted groundwater have been treated. The treatment system is effective in reducing levels of contaminants to below the drinking water standards. Monitoring of the wells is showing decreasing trends with respect to arsenic. In 2006, reporting was reduced to annual by the Department. Gulf Power submitted the annual report March 9, 2007. An addendum to this report addressing the Department's questions was submitted in September 2007. Five additional recovery wells were installed in November and December 2007 to tie into the horizontal well. In March 2008, the annual monitoring report was submitted. A new well was installed on Cary Avenue in the Unit 3 aquifer on May 7, as requested by FDEP. The first sampling result in June showed ND levels of arsenic in groundwater. *Deoxygenating system components were successfully skid-mounted and delivered to the site.*

Graceville substation: In November 2003 approximately 3600 tons of impacted soils were removed from the retired portion of the substation and properly disposed of at the Springhill Regional Landfill. Gulf Power is investigating additional excavation at the site and will report to the department after completion of the investigation and excavation activities.

Holmes Creek substation: A CAR was submitted to the Department for the Holmes Creek substation site in December 2005. The Department requested additional information on the Holmes Creek CAR under a May 11, 2006 cover. Gulf Power submitted the additional information as an addendum to the CAR on September 5, 2006. Gulf Power addressed the comments from the Department's site visit. Gulf met with the Department in December 2007 to discuss further comments and activities. *A letter dated May 1, 2008, from the DEP requested additional assessment activities. One additional well was installed in August 2008.*

Honeysuckle substation: Gulf received an SRCO for this site in November 2007. Done

Live Oak substation: Gulf received an SRCO for this site in October 2007.

Long Point substation: A partial excavation was initiated at this site on December 9, 2004, with a total of approximately 2100 tons of impacted soil removed and transported to the Springhill Landfill for disposal. Additional soil sampling will be required to determine the horizontal extent of arsenic in the soil above the 10 mg/kg guidance concentration prior to the conclusion of excavation activities at this site. The remaining impacted soils were excavated at this site in July and August 2006. Gulf Power sampled several adjacent property owners' irrigation wells and discovered elevated concentrations of arsenic in several of these irrigation water wells. Gulf Power offered and the owner accepted to use potable water as the supply for the irrigation system at Gulf's expense. The irrigation system has been hooked up to potable water and ground water is no longer used by this property owner for irrigation. *Monitoring wells have been installed at the site. The CAR is in progress and scheduled for completion by December 1, 2008.*

Lynn Haven substation: In July 2006, Gulf Power submitted the sixth post-remediation monitoring report for the retired Lynn Haven substation. The majority of the residual plume is within Gulf's property boundary and beneath 11th street. This site continues to be under a monitoring only status. *The Ninth annual report was submitted in May 2008. On May 12 and 13, 2008, the ditches along 11th street were excavated. An excavation report was submitted in June 2008.*

Miramar Beach substation: Three piezometers were installed at the Miramar Beach substation to determine groundwater flow direction. One piezometer was damaged and replaced in October 2007. *Sampling of private wells has been completed. Monitoring wells have been installed at the site and a CAR is scheduled for completion by December 1, 2008.*

Molino Crossroads substation: The contamination assessment of this substation began on July 21, 2003. A CAR was submitted to the Department in August 2004, with additional information submitted in September 2004. From November 28 - December 23, 2005, approximately 5597 tons of soil containing arsenic in concentrations above the determined background level were removed from the property south of the substation and from areas outside of the substation fence. An Addendum to the Excavation Summary was submitted to the Department by the May 31, 2006 deadline. The Department responded to the Addendum in an August 23, 2006 letter requesting additional sampling. Gulf Power submitted the response in November 2006. *In November 2007, Gulf removed an area 20 by 20 feet wide and 4 feet, two inches deep in the area of MSCS-2. Confirmation sample contained 5.8 mg/kg arsenic, which is below the established background level. All soils outside the fence above the 7.5 mg/kg established background level have been removed. In a letter dated May 15, 2008, the DEP denied Gulf's recommendation for NFA because soils within the fence still contain arsenic above the 10 mg/kg. Soils above the guidance concentration of 10 mg/kg outside of the fence were removed. Gulf requested a NFA for soils outside the fence and groundwater in a May 30, 2008 letter. The Department denied the NFA request and has suggested Gulf pursue a conditional SRCO.*

Monsanto substation: The second semi-annual sampling event was conducted in October and a report was submitted to the Department in December 2005. Because groundwater flow direction remained unchanged from that observed in previous sampling events, and arsenic was not detected in down-gradient wells above laboratory detection limits, annual sampling and reporting was requested for this site in the semi-annual report submitted in December 2007. *The site continues to be sampled semi-annually with annual reporting. The next annual report will be submitted to the Department in December 2008.*

North Hill substation: Excavation of this site occurred during the week of March 17th 2003. Soils were removed to varying depths and disposed of at the Springhill Regional Landfill. Additional soil and groundwater samples were collected in the 3rd quarter of 2004, and a CAR for this site, requesting a Site Rehabilitation Completion Order, was submitted to the Department in December 2004. *Gulf Power is waiting for a response from the Department.*

Old Shalimar substation: *The retired Old Shalimar substation, located on Eglin Air Force Base, was excavated in June 2008. An excavation report is being prepared.*

Ponce De Leon substation: The Ponce site was reduced from quarterly to semi-annual groundwater monitoring with annual reporting. Results indicate that arsenic levels continue to be below detection in the site's compliance wells. The seventh annual report was submitted in November 2007. *Semi-annual monitoring continues with the next annual monitoring report due in November 2008.*

Tyndall AFB substation: Partial excavation of this substation began on July 30, 2003. A total of 1847 tons of soil were excavated from within and around the active substation and transported to the Waste Management Springhill Landfill. The Department approved natural attenuation

monitoring in June 2005, and the Third Annual Report was submitted in November 2006. *The Fifth Annual Report was submitted in October 2008.*

St. Andrews: On September 15, 1998, as requested by the Department, Gulf Power Company submitted an excavation summary report. On April 20, 1999, we received an NFA for soils at this site. The CAR for this site was submitted to the Department in September 2002, and a CAR Addendum was submitted to the Department on March 12, 2003. Based on the results of these documents and additional investigative activities, the St. Andrew's Monitoring Natural Attenuation (MNA) RAP for Groundwater was submitted in July 2003. MNA for this site was approved by the Department in September 2003. The fifth annual MNA report was delivered to the Department in January 2008. The site is currently being used as a demonstration site for phytoremediation. Over 300 poplar and willow trees were planted at the site in March 2008 to test the effect of the mass planting as a hydraulic barrier. *Three wells were replaced after being destroyed by the local water department during sewer updates. Additional private irrigation wells have been tested. The next annual report will be completed in January 2009.*

West Hill: An excavation report was submitted to the Department on December 6, 1999 and No Further Action status for soils was granted on February 21, 2000. Groundwater samples were collected in the 3rd quarter of 2004 and a CAR for this site was submitted to the Department in November 2004 requesting a Site Rehabilitation Completion Order. The Department stated its previous NFA was premature under a March 24, 2006 cover requesting a Addendum to the CAR. Gulf Power responded to the Department under a June 6, 2006 cover stating that groundwater sampling results of "non-detect" support the previous excavation activities and the NFA was and is appropriate. On March 2, 2007, Gulf Power responded to the Department's January 5, 2007 letter requesting further activities. Gulf stated that ground water sampling results of "non-detect" supports the previous excavation activities and the NFA was and is appropriate. *DEP has approved Gulf's request for NFA, pending engineering controls and supporting documents.*

We will continue to keep the Department updated with meetings and in writing on current activities at our sites. Gulf Power continues to maintain compliance with Consent Order 88-0471. If you have any questions regarding this information, please feel free to call me at 850-444-6551.

Sincerely,

Kevin Lee Beaty

Mr. Richard "Mike" Markey
Environmental Affairs
Gulf Power Company
One Energy Place
Pensacola, Florida 32520

Dear Mr. Markey:

This is in response to the North Hill Retired Substation Contamination Assessment Report (CAR), Soil Excavation Report (SER) and Soil Excavation Report Addendum (SERA). The substation in question is located at the corner of D and West Avery Streets in Pensacola, Escambia County, Florida. The North Hill reports were prepared and submitted by Southern Company Services, Inc.'s Earth Science and Environmental Engineering Technical Services Branch. The SER indicates that the extent of soil contamination was determined and 2,169.36 tons of contaminated soil was excavated. The material was disposed of properly and the excavation refilled. It is covered by a parking lot.

Further, the CAR indicates that the ground water has not been impacted. Therefore, we believe that the request for a finding of no further action presented in the CAR is justified; however, not without conditions. It appears that the site is eligible for a Site Rehabilitation Completion Order with engineering and institutional controls.

We will expect to receive draft Restrictive Covenants for the North Hill Substation on or before February 15, 2009. If you have any questions, please contact Victor Hultstrand at (850) 595-8360, extension 1212 or by e-mail at victor.hultstrand@dep.state.fl.us.

Sincerely,

Karen Shea

RE: Status of the Substation Projects in the 4th Quarter 2012

Dear Mr. Webster:

Gulf Power Company submits this letter as an update of the activities that are being conducted at various substation sites within our service area. A summary of the status of each project is found below. For reference, the current status is shown in italics:

Alford substation: Source abatement was initiated at this site on November 29, 2004 and completed on December 7, 2004. A total of approximately 3800 tons of impacted soil was removed and transported to the Springhill Landfill for disposal. A summary of the excavation activities will be included as part of the contamination assessment report (CAR) that is currently being prepared for this site. *This report will be submitted to the Department upon completion.*

Alger Sullivan: *Gulf received an SRCO for this site on October 13, 2011.*

Altha substation: The Altha site, pursuant to the Department approved Remedial Action Plan, is on an annual groundwater monitoring schedule. Source abatement was initiated on May 16, 2001 and completed on May 24, 2001. A total of 2,122 tons of impacted soil was removed and transported to the Springhill Landfill for proper disposal. The seventh annual groundwater monitoring summary report was submitted in March 2008 as required. On May 2, 2008, Gulf received a Conditional Site Rehabilitation Order for the substation as a result of a restrictive covenant recorded with the deed for the property. *All monitoring wells have been abandoned.*

Amerada Hess substation: Under cover letter dated March 28, 2005 the Department denied an unconditional site rehabilitation order for this site because soil arsenic concentrations were above the Soil Cleanup Target Levels (SCTLs) listed in 62-777 F.A.C. In response to a letter dated March 18, 2008, Gulf collected additional off site soil samples for analysis. Gulf submitted a report of the findings and the Department approved a request to excavate one small portion of the substation to remove all soil contamination above 10 mg/kg. *The excavation was completed and on June 19, 2009, an unconditional Site Rehabilitation Completion Order was granted by the Department.*

Arizona Chemical substation: *An unconditional Site Rehabilitation Completion Order for the site was granted by the Department in September 1, 2010.*

Bayou Marcus substation: Contamination assessment activities at this substation began in August 2003. A CAR was submitted to the Department in October 2004. Gulf Power received the Department's responses to the CAR requesting additional soil sampling and responded to the Department under a June 22, 2006 cover. Gulf Power received the Department's December 15, 2006 response to Gulf's letter of June 22, 2006 and responded to the Department under a January 22, 2007 letter. The annual monitoring report was submitted in August 2007. The Department responded that institutional measures (fencing of Gulf property) will be sufficient and once this is completed, an SRCO will be issued. The second and final annual monitoring report was submitted in January 2009 with all wells continuing to be below the detection limit. Verification that the fence is in place was provided to the Department in February 2009. *A conditional Site Rehabilitation Completion Order was issued for the site on April 1, 2010.*

Beach Haven substation: *To date, over 299 million gallons have been treated and re-injected.* Additional wells were installed in February and May 2008 to enhance the existing groundwater treatment system. The installation of the recovery/injection well piping began the week of May 19, 2008. The upgraded system was fully operational as of July 21, 2008. The annual report was submitted in June 2012.

Beal Parkway substation: In September 2005, a monitoring only plan was submitted to the Department for approval. In November 2006, Gulf Power received an approval from the Department to use 50 ppb as opposed to a 10 ppb target level. Gulf submitted the Second Annual Natural Attenuation Report in March 2008. *Milestone objectives for the site were included in the March 2009 Annual Natural Attenuation report. Gulf has prepared* and submitted a corrective action proposal. All ¾" Geoprobe wells were abandoned and replaced with 2" monitoring wells. An addendum to the annual MNA report was submitted in May 2010. *The annual report was submitted in March 2012.*

Belmont and G substation: Excavation of arsenic-impacted soils began at this retired substation on April 4, 2002. A Soil Excavation Report was submitted to the Department on January 9, 2003. On February 12, 2003 we received a No Further Action for soils at this site. Groundwater sampling was conducted at this site in September and October of 2004, and a CAR was submitted to the Department in November 2004 requesting a Site Rehabilitation Completion Order. Gulf Power responded in a December 10th, 2008 letter to an information request from the Department dated October 28, 2008. *On April 6, 2009, a Site Rehabilitation Completion Order was issued by the Department. All monitoring wells have been abandoned.*

Beulah substation: *A No Further Action letter was received from the Department on September 29, 2011.*

Blackjack substation: *Gulf received a Site Rehabilitation Completion Order for this site February 12, 2010.*

Bronson Field substation: *Gulf received a No Further Action status for this site on December 14, 2012.*

Byrneville substation: *Gulf received a Site Rehabilitation Completion Order for this site in April 2008.*

Century substation: Contamination assessment activities at this substation began in 2003. However, because accessibility issues encountered during the installation of a monitoring well, this assessment was placed on hold. The accessibility issues were resolved allowing the contamination assessment to be completed. Gulf Power conducted source abatement at this substation in June, July and November 2007. The CAR and excavation report were completed in April 2008. Gulf responded to the Department's comments on the report in February 2009. *Gulf addressed additional comments following FDEP's review and a Site Rehabilitation Completion Order was issued February 12, 2010. All monitoring wells have been abandoned.*

Crestview City substation: *Excavation of the site began on September 1, 2009. Activities were completed by the first week in October 2009. A groundwater evaluation was performed on the site in 2012 and found no groundwater impacts. A complete Soil and Groundwater Assessment Report was filed on December 7, 2012 requesting a No Further Action for the site.*

Defuniak Springs substation: On April 11th though April 18th 2001, a total of 1665.67 tons of impacted soils were removed from this site and properly disposed of at the Springhill Landfill. In December 2001 we received a No Further Action for soils to a depth of 5-1/2 feet bls. A full CAR was submitted to the Department in October 2003 requesting a Site Rehabilitation Completion Order. Additional excavation activities began on May 3 and ended on May 11, 2005, and all soils containing arsenic above the 10 mg/kg guidance concentration were removed. Approximately 1400 tons of soil was transported to the Springhill Landfill. *Gulf requested the Department provide written confirmation that this site has met and is in compliance with the requirements of Consent Order 88-0471. Gulf Power received a SRCO from the Department on February 2011.*

East Hill substation: The recently retired site was excavated in October and November 2011. A Soil and Groundwater Assessment Report will be filed with the FDEP in 2013.

East Pensacola Heights substation: *The retired substation was excavated in early September 2008. A Soil and Groundwater Assessment Report will be filed with the FDEP in 2013.*

Ellyson Field substation: *Gulf received a Site Rehabilitation Completion Order for this site in November 2007.*

Ft. Walton Beach substation: The treatment system is currently operational and, *as of December 11, 2012, over 329,000,000 gallons of impacted groundwater have been treated.* The treatment system remains effective at reducing levels of contaminants to below the drinking water standards, and monitoring of the wells continues to indicate decreasing trends with respect to arsenic. The three remaining vertical recovery wells along Crescent Circle were connected to the treatment system during the first quarter of 2009 to improve recovery of the groundwater plume in that area. Gulf Power submitted the annual report to FDEP on March 26, 2009. Given the static nature of the plume over the last three years, ES&EE recommended that the sampling frequency be reduced from quarterly to semiannually. Revision 3 to the Health and Safety Plan, which included the upgrade to the treatment system and the results of air monitoring inside the treatment trailer, was submitted to Gulf on June 19, 2009. The deoxygenating system continues to operate as planned and sealed engineering drawings of the system were submitted to FDEP in July 2009. *The Annual Monitoring Report was submitted to the DEP March 2012. The FDEP approved replacement well for MW-31 will be installed in the near future.*

Graceville substation: In November 2003 approximately 3600 tons of impacted soils were removed from the retired portion of the substation and properly disposed of at the Springhill Regional Landfill. *Gulf Power is investigating additional excavation at the site and will report to the Department after completion of the investigation and excavation activities.*

Grand Ridge: *Gulf received a Site Rehabilitation Completion Order for this site in June 2011.*

Greenhead: *Gulf received a No Further Action status for this site October 26, 2012.*

Gonzales and 13th substation: *The retired substation was excavated in June 2009. A Soil and Groundwater Assessment Report was submitted on December 27, 2012 requesting a No Further Action for the site.*

Hathaway substation: *Gulf received a Site Rehabilitation Completion Order for this site August 17, 2010.*

Holmes Creek substation: A CAR was submitted to the Department for the Holmes Creek substation site in December 2005. The Department requested additional information on the Holmes Creek CAR under a May 11, 2006 cover. Gulf Power submitted the additional information as an addendum to the CAR on September 5, 2006. Gulf Power addressed the comments from the Department's site visit. Gulf met with the Department in December 2007 to discuss further comments and activities. A letter dated May 1, 2008, from the Department requested additional assessment activities. One additional well was installed in August 2008. The results of the sampling were below the detection limit. A written response was delivered to the Department in April 2009. The first semi-annual Monitoring Only Report was submitted to the Department on October 31, 2011. *The semi-annual report was submitted and approved by the FDEP January 3, 2013. Sampling will continue as approved by the FDEP.*

Honeysuckle substation: *Gulf received a Site Rehabilitation Completion Order for this site in November 2007.*

Humble #5: *Gulf received a No Further Action status for this site August 15, 2012.*

Jenks Avenue substation: *The retired substation was excavated in May 2010. The Jenks Avenue Soil and Groundwater Assessment Report, which included the Soil Excavation Summary Report, was submitted to the DEP in January 2012. At the request of the DEP, additional soil was excavated and one additional groundwater monitoring well installed offsite in December 2012. A report of the additional activities is being prepared for submittal by the January 31, 2013 due date.*

Live Oak substation: *Gulf received a Site Rehabilitation Completion Order for this site in October 2007.*

Long Point substation: A partial excavation was initiated at this site on December 9, 2004, with a total of approximately 2100 tons of impacted soil removed and transported to the Springhill Landfill for disposal. The remaining impacted soils were excavated at this site in July and August 2006. The Contamination Assessment Report was delivered to the Department in December 2008. A response to the Department's comments on the CAR was delivered on July 6, 2009. Gulf is currently addressing DEP's comments on the CAR. Installation of an additional well and soil delineation were completed November 24, 2009. A soil delineation report was

completed and submitted to the Department. Gulf submitted a response to the Department's comments regarding the soil delineation report on October 20, 2010. *As part of the ongoing investigation, an additional well was installed August 9 with sampling completed in September, 2011. The DEP concurred with continued monitoring at the site. DEP has requested monitoring of private wells on a semi-annual basis. On November 16, 2012 Gulf submitted the semi-annual private well sampling to the FDEP.*

Lynn Haven substation: In July 2006, Gulf Power submitted the sixth post-remediation monitoring report for the retired Lynn Haven substation. The majority of the residual plume is within Gulf's property boundary and beneath 11th street. This site continues to be under a monitoring only status. On May 12 and 13, 2008, the ditches along 11th street were excavated. An excavation report was submitted in June 2008. In March 2009, Gulf requested and was granted an extension of post-remediation monitoring at the site through 2015 with semi-annual sampling. *The annual report was submitted in September 2012.*

Miramar Beach substation: A Contamination Assessment Report was completed and submitted to the Department in December 2008. A response to the Department's comments on the CAR was delivered in June 2009. The DEP indicated that the extent of the soil contamination had been adequately characterized but more groundwater data may be needed. Proposed locations for two additional wells were submitted March 18, 2010. Wells were installed June 2010 with non-detect results. *DEP requested quarterly monitoring of selected monitoring wells at the site. The latest quarterly report was submitted in November 2012.*

Molino Crossroads substation: The contamination assessment of this substation began on July 21, 2003. A CAR was submitted to the Department in August 2004, with additional information submitted in September 2004. From November 28 - December 23, 2005, approximately 5597 tons of soil containing arsenic in concentrations above the determined background level were removed from the property south of the substation and from areas outside of the substation fence. An Addendum to the Excavation Summary was submitted to the Department by the May 31, 2006 deadline. The Department responded to the Addendum in an August 23, 2006 letter requesting additional sampling. Gulf Power submitted the response in November 2006. *In* November 2007, Gulf removed an area 20 by 20 feet wide and 4 feet, two inches deep in the area of MSCS-2. Confirmation sample contained 5.8 mg/kg arsenic, which is below the established background level. All soils outside the fence above the 7.5 mg/kg established background level have been removed. In a letter dated May 15, 2008, the Department denied Gulf's recommendation for NFA and suggested a Conditional SRCO for the site. *A Restrictive Covenant was prepared for the site. The final Conditional SRCO was issued August 26, 2009.*

Monsanto substation: Groundwater flow direction remains unchanged from that observed in previous sampling events and arsenic has not been detected in down-gradient wells above laboratory detection limits. The site continues to be sampled semi-annually with annual reporting. The annual report was submitted to the Department in December 2010. *In February 2011, Gulf received a notice that the conditions of the Consent Order have been met for this site and no further monitoring is required.*

Moss Hill: *Gulf received an unconditional Site Rehabilitation Completion Order for this site in November 2009.*

North Hill substation: Excavation of this site occurred during the week of March 17th 2003. Soils were removed to varying depths and disposed of at the Springhill Regional Landfill. Additional soil and groundwater samples were collected in the 3rd quarter of 2004, and a CAR for this site,

requesting a Site Rehabilitation Completion Order, was submitted to the Department in December 2004. *No groundwater contamination is present at the site. Gulf Power received a Conditional SRCO foe the site September 13, 2010.*

Northside: *Gulf received an unconditional Site Rehabilitation Completion Order for this site in November 2009.*

Oak Avenue: *Excavation of the site was completed June 17, 2011 and site restoration completed June 24. A Site Assessment Report detailing the excavation and groundwater monitoring activities was submitted to the FDEP in October 2013.*

Old Shalimar substation: *The retired Old Shalimar substation, located on Eglin Air Force Base, was excavated in June 2008. Monitoring wells are planned for the site pending approval from Eglin.*

Parker substation: *Gulf received an unconditional Site Rehabilitation Completion Order for this site in July 2009.*

Pine Forest: *Gulf received an unconditional Site Rehabilitation Completion Order for this site in December 2009.*

Philips Inlet: *An unconditional Site Rehabilitation Completion Order for this site was received in December 2010.*

Ponce De Leon substation: The Ponce site was reduced from quarterly to annual groundwater monitoring with annual reporting. Results indicate that arsenic levels continue to be below detection in the site compliance wells and the plume is smaller than originally predicted. *The latest annual monitoring report was submitted in September 2012.*

Tyndall AFB substation: Partial excavation of this substation began on July 30, 2003. A total of 1847 tons of soil were excavated from within and around the active substation and transported to the Waste Management Springhill Landfill. The Department approved natural attenuation monitoring in June 2005. The Fifth Annual Report was submitted in October 2008. Semi-annual groundwater sampling was completed August 2009 and the Annual Report was transmitted to the FDEP in October 2009. *Semi-annual sampling was conducted during August 2021. The Annual Report was transmitted to FDEP in October 2012.*

Shoal River substation: *Gulf received a letter from the FDEP on November 29 granting a No Further Action with Institutional Controls status for the site. The required Draft Restrictive Covenant documents are being prepared for submittal by the January 29, 2013 due date.*

St. Andrews substation: On September 15, 1998, as requested by the Department, Gulf Power Company submitted an excavation summary report. On April 20, 1999, Gulf received an NFA for soils at this site. The CAR was submitted to the Department in September 2002 and a CAR Addendum was submitted to the Department on March 12, 2003. Based on the results of these documents and additional investigative activities, the St. Andrew's Monitoring Natural Attenuation (MNA) RAP for Groundwater was submitted in July 2003. MNA for this site was approved by the Department in September 2003. The site is currently being used as a demonstration site for phytoremediation. Over 600 poplar, willow trees and eucalyptus were planted at the site in March and October 2008 to test the effect of the mass planting as a hydraulic barrier. Three wells were replaced after being destroyed by the local water department during

sewer updates. Private wells have been tested. Additional downgradient wells were installed in March and October 2009 and June 2011. *One monitoring well was damaged and replaced in July 2012. The latest annual report was submitted in January 2012. The 2013 annual report is currently being prepared for submittal.*

West Hill substation: An excavation report was submitted to the Department on December 6, 1999 and No Further Action status for soils was granted on February 21, 2000. *The DEP approved Gulf's request for SRCO in November 2009. All monitoring wells have been abandoned.*

Accelerated Substation Assessment Program (ASAP): (Formerly Priority II substations.) Assessment activities include delineation of onsite soil arsenic to 10 mg/kg and installation of groundwater monitoring wells at sites where the water table is less than 30 feet below the surface. *To date, assessments for 61 Priority II sites have been completed or are in progress. Soil and Groundwater Assessment reports were submitted to FDEP in 2012 for the following sites: 13th and Gonzalez, 4th and Magnolia, Bronson Field, Chipola, Crestview City, Greenhead, Henko, Jenks Avenue, Lullwater, Moreno Court, Navarre Regulator, Oak Avenue, Paxton, Shoal River and Waterfront Marina.*

We will continue to keep the Department updated with meetings and in writing on current activities at our sites. As discussed with the Department, Gulf Power continues to maintain compliance with Consent Order 88-0471A. If you have any questions regarding this information, please feel free to call me at 850-444-6551.

Sincerely,

Kevin Lee Beaty

Institutional Controls and Engineering Controls Audit Program
Gulf Power North Hill Substation
FDEP Site #ERIC_6749
ICR ID #54
Corner of West Avery and D Street
Pensacola, Escambia County, Florida

Arcadis U.S., Inc. (Arcadis) is pleased to provide the Florida Department of Environmental Protection (FDEP) this Institutional Controls/Engineering Controls (IC/EC) Audit Report (ICECAR) for the Gulf Power North Hill Substation site (Site). The objective of the audit was to determine whether institutional and/or engineering controls are documented for the property within various government agency files, that the current owner is aware of the controls placed on the property, and that the current owner is properly implementing the controls. The following sections summarize the results of Arcadis' review of pertinent files, communications with the property owner representative, and visit to the Site to inspect the ICs/ECs in place. Based on the information gathered during these activities, Arcadis has included a summary of findings within this report. A previous ICECAR report was submitted to FDEP on August 31, 2016.

SITE BACKGROUND

Listed below is a brief summary of background details leading up to the establishment of ICs and/or ECs for the Site property.

- The Site is currently utilized as a parking lot serving the property to the south.
- The Site was developed as a substation for Gulf Power Company in 1953.
- Historical Site impacts include arsenic in soils, which resulted from the application of herbicides for weed control. No groundwater contamination has been identified at the Site.
- Soil and groundwater assessments were completed at the Site from 2003 to 2005.
- A soil excavation was completed in March 2003 and consisted of the removal of approximately 2,169 tons of impacted soil.

On July 28, 2010, Gulf Power Company recorded a Declaration of Restrictive Covenant (Restrictive Covenant) in Official Record Book 6618, Pages: 890-897, Public Records of Escambia County, Florida (**Attachment 1**) to address remaining soil impacts. The Restrictive Covenant includes a land use restriction, a digging restriction, a dewatering restriction, and an engineering control in the form of an impermeable cap.

Based on documentation submitted with the Restrictive Covenant and corresponding technical documents, the FDEP issued a Conditional Site Rehabilitation Completion Order (SRCO) on September 13, 2010, certifying that Site rehabilitation requirements had been satisfied by Gulf Power Company. The SRCO is also provided as **Attachment 1**.

FILE REVIEWS

Institutional Controls Registry (ICR) Review

The ICR database lists the Site under identification number ERIC_6749. The information provided in the ICR database is summarized in the table below:

IC MECHANISM	IC RECORD DATE	IC TYPE	EC TYPE	CONTAMINATED MEDIA	CONTAMINATION
RESTRICTIVE COVENANT	JULY 28, 2010	DIGGING RESTRICTION & LAND USE RESTRICTION	IMPERMEABLE CAP	SOIL	METAL-ARSENIC

The information in the ICR database is consistent with other sources aside from the following exceptions:

- The ICR database does not list the dewatering restriction, or the EC Maintenance requirement referenced in the Restrictive Covenant.
- The “Boundary Mechanism Book Number” is listed as “59”, however; the book number should be updated to 6618.
- The “Boundary Mechanism Page Numbers” are listed as “107”, however; the page numbers should be updated to 890-897.

Escambia County Property Appraiser/Clerk of Circuit Court File Review

- The Escambia County Property Appraiser (https://www.escpa.org//) indicated that the address for the parcel containing the ICs/ECs is Avery Street, in Pensacola, Escambia County, Florida.
- The Escambia County Property Appraiser records identified Florida Power & Light Company, as the current property owner (PID: 182S306000013009). An Escambia County Property Appraiser Aerial Map and Property Information Sheet are presented in **Attachment 2**.
- The property appraiser and clerk of court did not have any records regarding recent property transactions.
- A review of the Escambia County Clerk of Circuit Courts and Comptroller website (https://www.escambiaclerk.com/) identified the July 28, 2010, Restrictive Covenant filed by Gulf Power Company and the FDEP (Official Record Book: 6618, Pages: 890-897.

Declaration of Restrictive Covenant: July 28, 2010	
Book/Pages	Book 6618, Pages: 890-897

FDEP OCULUS File Review

A search of the FDEP's OCULUS database (https://depedms.dep.state.fl.us/) identified multiple Site-related files listed in the Waste Cleanup Files. Arcadis reviewed documents related to the environmental Site activities. Key documents in the OCULUS database include: technical submittals, regulatory correspondence, historical records, Restrictive Covenant, and the SRCO.

FDEP Facility ID Number:	Number of Files:
COM_179896	0
ERIC_6749	33

COMMUNICATION WITH OWNER/SITE VISIT

On October 14, 2022, Arcadis contacted the property owner representative of Florida Power and Light Company, Ms. Ashley Jansen (Environmental Manager), to discuss the restrictions placed on the property and to coordinate the Site visit. Ms. Jansen indicated that she was aware of the restrictions placed on the property.

A Site visit was performed on October 14, 2022. The property is currently utilized as a parking lot serving the property to the south. No evidence was observed to indicate any activities had been performed that would violate the requirements of the Restrictive Covenant. The engineering control appeared to be in adequate condition during the performance of the Site visit. Photographs from the Site visit are provided below:

Photograph 1 – Engineering control located on site (facing north).

Photograph 2 – Engineering control located on site (facing northwest).

Photograph 3 – Engineering control located on site (facing north).

Photograph 4 – Engineering control located on site (facing east).

SUMMARY OF FINDINGS AND INCONSISTENCIES

The databases researched during the preparation of the ICECAR appeared to accurately reflect the requirements of the Restrictive Covenant, except for the following inconsistencies:

- The ICR database does not list the dewatering restriction, or the EC Maintenance requirement referenced in the Restrictive Covenant.
- The “Boundary Mechanism Book Number” is listed as “59”, however; the book number should be updated to 6618.
- The “Boundary Mechanism Page Numbers” are listed as “107”, however; the page numbers should be updated to 890-897.

Based on the Site visit and communications with the property owner representative, there was no evidence of any activities that appear to violate the terms of the Restrictive Covenant. The property owner representative, Ms. Ashley Jansen, indicated that she was aware of the restrictions placed on the property.

Subject: Conditional Site Rehabilitation Completion Order
Gulf Power Company
North Hill Retired Substation
Corner of Avery and "D" Streets
Pensacola, Escambia County, Florida
FDEP Consent Order OGC# 88-0471
Comet Site No. 179896, Project No. 245451

Dear Mr. Markey:

This is in response to the May 2003 North Hill Substation Soil Excavation Report, the October 2003 North Hill Substation Addendum to the Soil Excavation Report and the November 2004 North Hill Substation Contamination Assessment Report for Soils and Ground Water. All of the reports were prepared by Earth Science and Environmental Engineering Southern Company Services for the Gulf Power Company retired substation located at the corner of Avery and D Streets in Pensacola, Escambia County, Florida. A Declaration of Restrictive Covenant has been recorded with the deed for this property, and is enclosed. The certified copy of the restrictive covenant and documentation submitted with the July 29, 2010 North Hill Restrictive Covenant – Signed and Recorded response letter serves as a No Further Action Proposal (NFAP) for this site. A map showing the location of the site for which this Site Rehabilitation Completion Order (Order) being issued is presented as Exhibit B of the enclosed Declaration of Restrictive Covenant.

The contamination at this substation resulted from the application of a herbicide containing arsenic trioxide. A Consent Order (OGC No. 88-0471) was executed by the Department on April 14, 1989, to address the arsenic contamination at numerous Gulf

Power substations across Northwest Florida. The NFAP is supported by earlier submittals, including, but not limited to:

- North Hill Substation Soil Excavation Report (SER), dated May 2003
- North Hill Substation Soil Excavation Report Addendum (SERA), dated October 2003
- North Hill Substation Contamination Assessment Report (CAR), dated November 2004
- Title Search Report, dated February 4, 2009
- E-mail from William D. Preston, P.A., dated February 10, 2009
- William D. Preston, P.A., Letter, dated February 10, 2009
- Certified copy of Warranty Deed, dated September 7, 1951, certified February 16, 2009
- William D. Preston, P.A., Letter, dated February 24, 2009
- Kevin Lee Beaty Letter, dated July 29, 2010
- Legal Description of property provided by Gulf Power (Exhibit A)
- Legal Description of property from Escambia County Property Appraiser (Included in Warranty Deed)
- Copy of signed and recorded by Clerk of Circuit Court Restrictive Covenants for the North Hill Retired Gulf Power Substation

Documentation submitted with the NFAP demonstrates that criteria set forth in Rule 62-780, Florida Administrative Code and the April 14, 1989 Consent Order, have been met. The NFAP and Consent Order are hereby incorporated by reference in this Order. Therefore, you are released from any further obligation to conduct site rehabilitation at the North Hill Retired Substation, except as set forth below.

In accordance with Chapter 376.30701(4), Florida Statutes (F.S.), upon completion of site rehabilitation, additional site rehabilitation is not required unless it is demonstrated that:

(1) You do not comply with the provisions contained within the Declaration of Restrictive Covenant filed prior to the execution of this Order. If at a later date you propose to remove the institutional controls or engineering controls you must obtain prior written approval from the Florida Department of Environmental Protection (Department). The removal of the controls must be accompanied by the immediate resumption of site rehabilitation, or implementation of other approved controls, unless it is demonstrated to the Department that the criteria of No Further Action without controls, are met.

(2) New information confirms the existence of an area of previously unknown contamination which exceeds the rehabilitation levels established in the

April 1989 Consent Order, or which otherwise pose the threat of real and substantial harm to public health, safety, or the environment;

(3) The level of risk is increased beyond the acceptable risk established under Section 376.30701(2), F.S., due to substantial changes in exposure conditions, such as a change in land use from nonresidential to residential use. Any person who changes the land use of the site, thereby causing the level of risk to increase beyond the acceptable risk, may be required by the Department to undertake additional remediation measures to ensure that human health, public safety, and the environment are protected consistent with Section 376.30701, F.S.;

(4) Fraud was committed in demonstrating site conditions or completion of site rehabilitation; or

(5) A new discharge of pollutants or hazardous substances occurs at the site subsequent to the issuance of this Order associated with the original contamination being addressed pursuant to Section 376.30701, F.S.

Legal Issues

The Department's Order shall become final unless a timely petition for an administrative hearing is filed under Sections 120.569 and 120.57, Florida Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for an administrative hearing are set forth below.

Persons affected by this Order have the following options:

(A) If you choose to accept the Department's decision regarding this Order, you do not have to do anything. This Order is final and effective as of the date filed with the Clerk of the Department, which is indicated on the last page of this Order.

(B) If you choose to challenge the decision, you may do the following:

(1) File a request for an extension of time to file a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for an administrative hearing; or

(2) File a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for an Administrative Hearing

For good cause shown, pursuant to Subsection 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for an administrative hearing. Such a request must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Gulf Power Company, shall mail a copy of the request to Gulf Power Company at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for an administrative hearing must be made.

How to File a Petition for an Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative hearing under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Gulf Power Company, shall mail a copy of the petition to Gulf Power Company at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsection 120.569(2), F.S. and Rule 28-106.201, F.A.C., a petition for an administrative hearing shall contain the following information:

(a) The name, address, and telephone number of each petitioner; the name, address, and telephone number of the petitioner's representative, if any; the facility owner's name and address, if different from the petitioner; the FDEP facility number, and the name and address of the facility;
(b) A statement of when and how each petitioner received notice of the Department's action or proposed action;
(c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;
(d) A statement of the disputed issues of material fact, or a statement that there are no disputed facts;

(e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;
(f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action; and
(g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective as of the date filed with the Clerk of the Department, which is indicated on the last page of this Order. Timely filing a petition for an administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the Department's clerk (see below).

Any questions regarding the Department's review of your NFAP should be directed to Victor S. Hultstrand at (850) 595-0597 or by e-mail at victor.hultstrand@dep.state.fl.us. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for an administrative hearing or a request for an extension of time to file a petition for an administrative hearing.

Sincerely,

Kenneth W. Prest, Jr.
District Director

DECLARATION OF RESTRICTIVE COVENANT

THIS DECLARATION OF RESTRICTIVE COVENANT (hereinafter "Declaration") is made this 26 day of July, 2010, by Gulf Power Company, a Florida Corporation (hereinafter "Gulf") and the Florida Department of Environmental Protection (hereinafter "DEP").

RECITALS

A. Gulf is the fee simple owner of that certain real property situated in Escambia County, in the State of Florida, more particularly described in Exhibit A attached hereto and made a part thereof (hereinafter the "Property").

B. The Property identified in this Declaration is currently known as the North Hill Retired Substation. The DEP Facility Identification Number for the Property is COMET Project Number 179896.

C. Gulf has completed site rehabilitation for the Property pursuant to the provisions and procedures set forth in Consent Order No. 88-0471 ("Consent Order") entered into between Gulf and DEP on April 14, 1989. As a result of previous investigative activities as referenced in the Consent Order, Gulf has determined that arsenic contamination is present in soils upon the Property at concentrations exceeding residential soil cleanup target levels. The arsenic contamination on the Property is documented in the following reports that are incorporated by reference:

Consent Order No. 88-0471, dated April 14, 1989, between Gulf and DEP
Contamination Assessment Report, prepared by Southern Company Services, Inc., dated November, 2004
Soil Excavation Report, prepared by Southern Company Services, Inc., dated May, 2003
Soil Excavation Report Addendum, prepared by Southern Company Services, Inc., dated October, 2003

D. The reports noted in Recital C set forth the nature and extent of contamination on the Property. The file containing the findings, conclusions and recommendations with respect to site rehabilitation is available for public inspection at the Florida Department of Environmental Protection, Northwest District Office, 160 Governmental Center, Pensacola, Florida 32502.

E. It is the intent of the restrictions in this Declaration to reduce or eliminate the risk of exposure of the arsenic contamination to the environment and to users or occupants of the Property and to reduce or eliminate the threat of migration of the arsenic contamination.

F. The DEP has agreed to issue a Site Rehabilitation Completion Order (SRCO) with Conditions (hereinafter "Order") upon recordation of this Declaration, and the DEP can unilaterally revoke the Order if the conditions of this Declaration or of the Order are not met. Additionally, in the event concentrations of arsenic increase above the levels approved in the Order, the DEP may require site rehabilitation to reduce concentrations of contamination to the levels authorized under the Consent Order. The Order relating to Gulf is on file with the DEP Northwest District, 160 Governmental Center, Pensacola, Florida 32502.

G. Gulf deems it desirable and in the best interest of all present and future owners of the Property that an Order with conditions be obtained and that the Property be held subject to certain restrictions and changes, all of which are more particularly hereinafter set forth.

NOW, THEREFORE, to induce the DEP to issue the Site Rehabilitation Completion Order with Conditions and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by each of the undersigned parties, Gulf agrees as follows:

1. The foregoing recitals are true and correct and are incorporated herein by reference.

2. Gulf hereby imposes on the Property the following restrictions:

   a. Generally, there shall be no agricultural use of the land, including forestry, fishing and mining; no hotels or lodging; no recreational uses including amusement parks, parks, camps, museums, zoos, or gardens; and no residential uses; and no educational uses such as elementary and secondary schools, or day care services. These prohibited uses are specifically defined by using the North American Industry Classification System, United States, 2002 (NAICS), Executive Office of the President, Office of Management and Budget. The prohibited uses by code are: Sector 11 Agriculture, Forestry, Fishing and Hunting; Subsector 212 Mining (except Oil and Gas); Code 512132 Drive-In Motion Picture Theaters; Code 51412 Libraries and Archives; Code 53111 Lessors of Residential Buildings and Dwellings; Subsector 611 Elementary and Secondary Schools; Subsector 623 Nursing and Residential Care

Facilities; Subsector 624 Social Assistance; Subsector 711 Performing Arts, Spectator Sports and Related Industries; Subsector 712 Museums, Historical Sites, and Similar Institutions; Subsector 713 Amusement, Gambling, and Recreation Industries; Subsector 721 Accommodation (hotels, motels, RV parks, etc.); Subsector 813 Religious, Grantmaking, Civic, Professional, and Similar Organizations; and Subsector 814 Private Households.

b. As referenced in Recital C above, Gulf has excavated and properly disposed of impacted soils upon the Property and the Excavation Area, as described in Exhibit B attached hereto and incorporated herein by reference, has been refilled with unimpacted soils. The Excavation Area, as described in Exhibit B, shall be permanently covered and maintained with an impermeable material that prevents human exposure and limits water infiltration.

c. Excavation and construction is not prohibited within the Excavation Area, as described in Exhibit B, provided that any contaminated soils that are excavated are removed and properly disposed of pursuant to Chapter 62-780, Florida Administrative Code (or subsequent contamination site cleanup criteria rule(s)). Nothing herein shall limit or conflict with any other legal requirements regarding construction methods and techniques that must be taken to minimize risk of exposure while conducting work in contaminated areas. For any dewatering activities, a plan must be in place to address and ensure the appropriate handling, treatment, and disposal of any extracted groundwater that may be contaminated.

3. For the purpose of monitoring the restrictions contained in paragraph 2 hereof, DEP or its respective successors and assigns shall have site access to the Property at reasonable times and with reasonable notice to the owner of the Property.

4. It is the intention of Gulf that the restrictions contained in this Declaration shall touch and concern the Property, run with the land and with the title to the Property, and shall apply to and be binding upon and inure to the benefit of the successors and assigns of Gulf, and to DEP, its successors and assigns, and to any and all parties hereafter having any right, title or interest in the Property or any part thereof. The DEP and its successors and assigns may enforce the terms and conditions of this Declaration by injunctive relief and other appropriate available legal remedies. Any forbearance on behalf of the DEP to exercise its right in the event of the failure of Gulf or its successors and assigns to comply with the provisions of this Declaration shall not be deemed or construed to be a waiver of the DEP's rights hereunder. This Declaration shall continue in perpetuity, unless otherwise modified in writing by Gulf and the DEP or their successors and assigns as provided in paragraph 6 hereof. These restrictions may be enforced in a court of competent jurisdiction by the DEP or its successor agency, or by any other person, firm, corporation, or governmental agency that is substantially benefited by this restriction.

5. In order to ensure the perpetual nature of these restrictions, Gulf shall record the deed referencing these restrictions by recording book and page. Gulf, and its successors and assigns, shall reference these restrictions in any subsequent deed of conveyance, including the recording book and page of record of this Declaration.

6. This agreement is binding until a release of covenant is executed by the DEP Secretary (or designee) and is recorded in the land records of Escambia County. To receive prior approval from DEP to revise or remove any requirement herein, cleanup target levels established pursuant to Florida Statutes and DEP rules must have been achieved. This Declaration may be modified in writing only. Any subsequent amendment of any requirement must be executed by both Gulf and the DEP or their respective successors and assigns and be recorded by the owner as an amendment hereto.

7. This Declaration shall not be construed as constituting an admission with respect to any liability or responsibility for site rehabilitation.

8. If any provision of this Declaration is held to be invalid by any court of competent jurisdiction, the invalidity of such provision shall not affect the validity of any other provisions thereof. All such other provisions shall continue unimpaired in full force and effect.

9. Gulf covenants and represents that on the date of execution of this Declaration that Gulf is seized of the Property in fee simple and has good right to create, establish, and impose this restrictive covenant on the use of the Property. Gulf also covenants and warrants that the Property is free and clear of any and all liens, mortgages, or encumbrances that could impair Gulf's rights to impose the restrictive covenant described in this Declaration or that would be superior to the restrictive covenant described in this Declaration.

Institutional Controls and Engineering Controls Audit Program
Gulf Power North Hill Substation
FDEP Site #ERIC_6749
ICR ID #54
Corner of West Avery and D Street
Pensacola, Escambia County, Florida

Arcadis U.S., Inc. (Arcadis) is pleased to provide the Florida Department of Environmental Protection (FDEP) this Institutional Controls/Engineering Controls (IC/EC) Audit Report (ICECAR) for the Gulf Power North Hill Substation site (Site). The objective of the audit was to determine whether institutional and/or engineering controls are documented for the property within various government agency files, that the current owner is aware of the controls placed on the property, and that the current owner is properly implementing the controls. The following sections summarize the results of Arcadis' review of pertinent files, communications with the property owner representative, and visit to the Site to inspect the ICs/ECs in place. Based on the information gathered during these activities, Arcadis has included a summary of findings within this report. A previous ICECAR report was submitted to FDEP on August 31, 2016.

SITE BACKGROUND

Listed below is a brief summary of background details leading up to the establishment of ICs and/or ECs for the Site property.

- The Site is currently utilized as a parking lot serving the property to the south.
- The Site was developed as a substation for Gulf Power Company in 1953.
- Historical Site impacts include arsenic in soils, which resulted from the application of herbicides for weed control. No groundwater contamination has been identified at the Site.
- Soil and groundwater assessments were completed at the Site from 2003 to 2005.
- A soil excavation was completed in March 2003 and consisted of the removal of approximately 2,169 tons of impacted soil.

On July 28, 2010, Gulf Power Company recorded a Declaration of Restrictive Covenant (Restrictive Covenant) in Official Record Book 6618, Pages: 890-897, Public Records of Escambia County, Florida (**Attachment 1**) to address remaining soil impacts. The Restrictive Covenant includes a land use restriction, a digging restriction, a dewatering restriction, and an engineering control in the form of an impermeable cap.

Based on documentation submitted with the Restrictive Covenant and corresponding technical documents, the FDEP issued a Conditional Site Rehabilitation Completion Order (SRCO) on September 13, 2010, certifying that Site rehabilitation requirements had been satisfied by Gulf Power Company. The SRCO is also provided as **Attachment 1**.

FILE REVIEWS

Institutional Controls Registry (ICR) Review

The ICR database lists the Site under identification number ERIC_6749. The information provided in the ICR database is summarized in the table below:

IC MECHANISM	IC RECORD DATE	IC TYPE	EC TYPE	CONTAMINATED MEDIA	CONTAMINATION
RESTRICTIVE COVENANT	JULY 28, 2010	DIGGING RESTRICTION & LAND USE RESTRICTION	IMPERMEABLE CAP	SOIL	METAL-ARSENIC

The information in the ICR database is consistent with other sources aside from the following exceptions:

- The ICR database does not list the dewatering restriction, or the EC Maintenance requirement referenced in the Restrictive Covenant.
- The “Boundary Mechanism Book Number” is listed as “59”, however; the book number should be updated to 6618.
- The “Boundary Mechanism Page Numbers” are listed as “107”, however; the page numbers should be updated to 890-897.

Escambia County Property Appraiser/Clerk of Circuit Court File Review

- The Escambia County Property Appraiser (https://www.escpa.org//) indicated that the address for the parcel containing the ICs/ECs is Avery Street, in Pensacola, Escambia County, Florida.
- The Escambia County Property Appraiser records identified Florida Power & Light Company, as the current property owner (PID: 182S306000013009). An Escambia County Property Appraiser Aerial Map and Property Information Sheet are presented in **Attachment 2**.
- The property appraiser and clerk of court did not have any records regarding recent property transactions.
- A review of the Escambia County Clerk of Circuit Courts and Comptroller website (https://www.escambiaclerk.com/) identified the July 28, 2010, Restrictive Covenant filed by Gulf Power Company and the FDEP (Official Record Book: 6618, Pages: 890-897.

Declaration of Restrictive Covenant: July 28, 2010	
Book/Pages	Book 6618, Pages: 890-897

FDEP OCULUS File Review

A search of the FDEP's OCULUS database (https://depedms.dep.state.fl.us/) identified multiple Site-related files listed in the Waste Cleanup Files. Arcadis reviewed documents related to the environmental Site activities. Key documents in the OCULUS database include: technical submittals, regulatory correspondence, historical records, Restrictive Covenant, and the SRCO.

FDEP Facility ID Number:	Number of Files:
COM_179896	0
ERIC_6749	33

COMMUNICATION WITH OWNER/SITE VISIT

On October 14, 2022, Arcadis contacted the property owner representative of Florida Power and Light Company, Ms. Ashley Jansen (Environmental Manager), to discuss the restrictions placed on the property and to coordinate the Site visit. Ms. Jansen indicated that she was aware of the restrictions placed on the property.

A Site visit was performed on October 14, 2022. The property is currently utilized as a parking lot serving the property to the south. No evidence was observed to indicate any activities had been performed that would violate the requirements of the Restrictive Covenant. The engineering control appeared to be in adequate condition during the performance of the Site visit. Photographs from the Site visit are provided below:

Photograph 1 – Engineering control located on site (facing north).

Photograph 2 – Engineering control located on site (facing northwest).

Photograph 3 – Engineering control located on site (facing north).

Photograph 4 – Engineering control located on site (facing east).

SUMMARY OF FINDINGS AND INCONSISTENCIES

The databases researched during the preparation of the ICECAR appeared to accurately reflect the requirements of the Restrictive Covenant, except for the following inconsistencies:

- The ICR database does not list the dewatering restriction, or the EC Maintenance requirement referenced in the Restrictive Covenant.
- The “Boundary Mechanism Book Number” is listed as “59”, however; the book number should be updated to 6618.
- The “Boundary Mechanism Page Numbers” are listed as “107”, however; the page numbers should be updated to 890-897.

Based on the Site visit and communications with the property owner representative, there was no evidence of any activities that appear to violate the terms of the Restrictive Covenant. The property owner representative, Ms. Ashley Jansen, indicated that she was aware of the restrictions placed on the property.

Subject: Conditional Site Rehabilitation Completion Order
Gulf Power Company
North Hill Retired Substation
Corner of Avery and "D" Streets
Pensacola, Escambia County, Florida
FDEP Consent Order OGC# 88-0471
Comet Site No. 179896, Project No. 245451

Dear Mr. Markey:

This is in response to the May 2003 North Hill Substation Soil Excavation Report, the October 2003 North Hill Substation Addendum to the Soil Excavation Report and the November 2004 North Hill Substation Contamination Assessment Report for Soils and Ground Water. All of the reports were prepared by Earth Science and Environmental Engineering Southern Company Services for the Gulf Power Company retired substation located at the corner of Avery and D Streets in Pensacola, Escambia County, Florida. A Declaration of Restrictive Covenant has been recorded with the deed for this property, and is enclosed. The certified copy of the restrictive covenant and documentation submitted with the July 29, 2010 North Hill Restrictive Covenant – Signed and Recorded response letter serves as a No Further Action Proposal (NFAP) for this site. A map showing the location of the site for which this Site Rehabilitation Completion Order (Order) being issued is presented as Exhibit B of the enclosed Declaration of Restrictive Covenant.

The contamination at this substation resulted from the application of a herbicide containing arsenic trioxide. A Consent Order (OGC No. 88-0471) was executed by the Department on April 14, 1989, to address the arsenic contamination at numerous Gulf

Power substations across Northwest Florida. The NFAP is supported by earlier submittals, including, but not limited to:

- North Hill Substation Soil Excavation Report (SER), dated May 2003
- North Hill Substation Soil Excavation Report Addendum (SERA), dated October 2003
- North Hill Substation Contamination Assessment Report (CAR), dated November 2004
- Title Search Report, dated February 4, 2009
- E-mail from William D. Preston, P.A., dated February 10, 2009
- William D. Preston, P.A., Letter, dated February 10, 2009
- Certified copy of Warranty Deed, dated September 7, 1951, certified February 16, 2009
- William D. Preston, P.A., Letter, dated February 24, 2009
- Kevin Lee Beaty Letter, dated July 29, 2010
- Legal Description of property provided by Gulf Power (Exhibit A)
- Legal Description of property from Escambia County Property Appraiser (Included in Warranty Deed)
- Copy of signed and recorded by Clerk of Circuit Court Restrictive Covenants for the North Hill Retired Gulf Power Substation

Documentation submitted with the NFAP demonstrates that criteria set forth in Rule 62-780, Florida Administrative Code and the April 14, 1989 Consent Order, have been met. The NFAP and Consent Order are hereby incorporated by reference in this Order. Therefore, you are released from any further obligation to conduct site rehabilitation at the North Hill Retired Substation, except as set forth below.

In accordance with Chapter 376.30701(4), Florida Statutes (F.S.), upon completion of site rehabilitation, additional site rehabilitation is not required unless it is demonstrated that:

(1) You do not comply with the provisions contained within the Declaration of Restrictive Covenant filed prior to the execution of this Order. If at a later date you propose to remove the institutional controls or engineering controls you must obtain prior written approval from the Florida Department of Environmental Protection (Department). The removal of the controls must be accompanied by the immediate resumption of site rehabilitation, or implementation of other approved controls, unless it is demonstrated to the Department that the criteria of No Further Action without controls, are met.

(2) New information confirms the existence of an area of previously unknown contamination which exceeds the rehabilitation levels established in the

April 1989 Consent Order, or which otherwise pose the threat of real and substantial harm to public health, safety, or the environment;

(3) The level of risk is increased beyond the acceptable risk established under Section 376.30701(2), F.S., due to substantial changes in exposure conditions, such as a change in land use from nonresidential to residential use. Any person who changes the land use of the site, thereby causing the level of risk to increase beyond the acceptable risk, may be required by the Department to undertake additional remediation measures to ensure that human health, public safety, and the environment are protected consistent with Section 376.30701, F.S.;

(4) Fraud was committed in demonstrating site conditions or completion of site rehabilitation; or

(5) A new discharge of pollutants or hazardous substances occurs at the site subsequent to the issuance of this Order associated with the original contamination being addressed pursuant to Section 376.30701, F.S.

Legal Issues

The Department's Order shall become final unless a timely petition for an administrative hearing is filed under Sections 120.569 and 120.57, Florida Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for an administrative hearing are set forth below.

Persons affected by this Order have the following options:

(A) If you choose to accept the Department's decision regarding this Order, you do not have to do anything. This Order is final and effective as of the date filed with the Clerk of the Department, which is indicated on the last page of this Order.

(B) If you choose to challenge the decision, you may do the following:

(1) File a request for an extension of time to file a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for an administrative hearing; or

(2) File a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

How to Request an Extension of Time to File a Petition for an Administrative Hearing

For good cause shown, pursuant to Subsection 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for an administrative hearing. Such a request must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Gulf Power Company, shall mail a copy of the request to Gulf Power Company at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for an administrative hearing must be made.

How to File a Petition for an Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative hearing under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Gulf Power Company, shall mail a copy of the petition to Gulf Power Company at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsection 120.569(2), F.S. and Rule 28-106.201, F.A.C., a petition for an administrative hearing shall contain the following information:

(a) The name, address, and telephone number of each petitioner; the name, address, and telephone number of the petitioner's representative, if any; the facility owner's name and address, if different from the petitioner; the FDEP facility number, and the name and address of the facility;
(b) A statement of when and how each petitioner received notice of the Department's action or proposed action;
(c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;
(d) A statement of the disputed issues of material fact, or a statement that there are no disputed facts;

(e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;
(f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action; and
(g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective as of the date filed with the Clerk of the Department, which is indicated on the last page of this Order. Timely filing a petition for an administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the Department's clerk (see below).

Any questions regarding the Department's review of your NFAP should be directed to Victor S. Hultstrand at (850) 595-0597 or by e-mail at victor.hultstrand@dep.state.fl.us. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for an administrative hearing or a request for an extension of time to file a petition for an administrative hearing.

Sincerely,

Kenneth W. Prest, Jr.
District Director

DECLARATION OF RESTRICTIVE COVENANT

THIS DECLARATION OF RESTRICTIVE COVENANT (hereinafter "Declaration") is made this 26 day of July, 2010, by Gulf Power Company, a Florida Corporation (hereinafter "Gulf") and the Florida Department of Environmental Protection (hereinafter "DEP").

RECITALS

A. Gulf is the fee simple owner of that certain real property situated in Escambia County, in the State of Florida, more particularly described in Exhibit A attached hereto and made a part thereof (hereinafter the "Property").

B. The Property identified in this Declaration is currently known as the North Hill Retired Substation. The DEP Facility Identification Number for the Property is COMET Project Number 179896.

C. Gulf has completed site rehabilitation for the Property pursuant to the provisions and procedures set forth in Consent Order No. 88-0471 ("Consent Order") entered into between Gulf and DEP on April 14, 1989. As a result of previous investigative activities as referenced in the Consent Order, Gulf has determined that arsenic contamination is present in soils upon the Property at concentrations exceeding residential soil cleanup target levels. The arsenic contamination on the Property is documented in the following reports that are incorporated by reference:

Consent Order No. 88-0471, dated April 14, 1989, between Gulf and DEP
Contamination Assessment Report, prepared by Southern Company Services, Inc., dated November, 2004
Soil Excavation Report, prepared by Southern Company Services, Inc., dated May, 2003
Soil Excavation Report Addendum, prepared by Southern Company Services, Inc., dated October, 2003

D. The reports noted in Recital C set forth the nature and extent of contamination on the Property. The file containing the findings, conclusions and recommendations with respect to site rehabilitation is available for public inspection at the Florida Department of Environmental Protection, Northwest District Office, 160 Governmental Center, Pensacola, Florida 32502.

E. It is the intent of the restrictions in this Declaration to reduce or eliminate the risk of exposure of the arsenic contamination to the environment and to users or occupants of the Property and to reduce or eliminate the threat of migration of the arsenic contamination.

F. The DEP has agreed to issue a Site Rehabilitation Completion Order (SRCO) with Conditions (hereinafter "Order") upon recordation of this Declaration, and the DEP can unilaterally revoke the Order if the conditions of this Declaration or of the Order are not met. Additionally, in the event concentrations of arsenic increase above the levels approved in the Order, the DEP may require site rehabilitation to reduce concentrations of contamination to the levels authorized under the Consent Order. The Order relating to Gulf is on file with the DEP Northwest District, 160 Governmental Center, Pensacola, Florida 32502.

G. Gulf deems it desirable and in the best interest of all present and future owners of the Property that an Order with conditions be obtained and that the Property be held subject to certain restrictions and changes, all of which are more particularly hereinafter set forth.

NOW, THEREFORE, to induce the DEP to issue the Site Rehabilitation Completion Order with Conditions and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by each of the undersigned parties, Gulf agrees as follows:

1. The foregoing recitals are true and correct and are incorporated herein by reference.

2. Gulf hereby imposes on the Property the following restrictions:

   a. Generally, there shall be no agricultural use of the land, including forestry, fishing and mining; no hotels or lodging; no recreational uses including amusement parks, parks, camps, museums, zoos, or gardens; and no residential uses; and no educational uses such as elementary and secondary schools, or day care services. These prohibited uses are specifically defined by using the North American Industry Classification System, United States, 2002 (NAICS), Executive Office of the President, Office of Management and Budget. The prohibited uses by code are: Sector 11 Agriculture, Forestry, Fishing and Hunting; Subsector 212 Mining (except Oil and Gas); Code 512132 Drive-In Motion Picture Theaters; Code 51412 Libraries and Archives; Code 53111 Lessors of Residential Buildings and Dwellings; Subsector 611 Elementary and Secondary Schools; Subsector 623 Nursing and Residential Care

Facilities; Subsector 624 Social Assistance; Subsector 711 Performing Arts, Spectator Sports and Related Industries; Subsector 712 Museums, Historical Sites, and Similar Institutions; Subsector 713 Amusement, Gambling, and Recreation Industries; Subsector 721 Accommodation (hotels, motels, RV parks, etc.); Subsector 813 Religious, Grantmaking, Civic, Professional, and Similar Organizations; and Subsector 814 Private Households.

b. As referenced in Recital C above, Gulf has excavated and properly disposed of impacted soils upon the Property and the Excavation Area, as described in Exhibit B attached hereto and incorporated herein by reference, has been refilled with unimpacted soils. The Excavation Area, as described in Exhibit B, shall be permanently covered and maintained with an impermeable material that prevents human exposure and limits water infiltration.

c. Excavation and construction is not prohibited within the Excavation Area, as described in Exhibit B, provided that any contaminated soils that are excavated are removed and properly disposed of pursuant to Chapter 62-780, Florida Administrative Code (or subsequent contamination site cleanup criteria rule(s)). Nothing herein shall limit or conflict with any other legal requirements regarding construction methods and techniques that must be taken to minimize risk of exposure while conducting work in contaminated areas. For any dewatering activities, a plan must be in place to address and ensure the appropriate handling, treatment, and disposal of any extracted groundwater that may be contaminated.

3. For the purpose of monitoring the restrictions contained in paragraph 2 hereof, DEP or its respective successors and assigns shall have site access to the Property at reasonable times and with reasonable notice to the owner of the Property.

4. It is the intention of Gulf that the restrictions contained in this Declaration shall touch and concern the Property, run with the land and with the title to the Property, and shall apply to and be binding upon and inure to the benefit of the successors and assigns of Gulf, and to DEP, its successors and assigns, and to any and all parties hereafter having any right, title or interest in the Property or any part thereof. The DEP and its successors and assigns may enforce the terms and conditions of this Declaration by injunctive relief and other appropriate available legal remedies. Any forbearance on behalf of the DEP to exercise its right in the event of the failure of Gulf or its successors and assigns to comply with the provisions of this Declaration shall not be deemed or construed to be a waiver of the DEP's rights hereunder. This Declaration shall continue in perpetuity, unless otherwise modified in writing by Gulf and the DEP or their successors and assigns as provided in paragraph 6 hereof. These restrictions may be enforced in a court of competent jurisdiction by the DEP or its successor agency, or by any other person, firm, corporation, or governmental agency that is substantially benefited by this restriction.

5. In order to ensure the perpetual nature of these restrictions, Gulf shall record the deed referencing these restrictions by recording book and page. Gulf, and its successors and assigns, shall reference these restrictions in any subsequent deed of conveyance, including the recording book and page of record of this Declaration.

6. This agreement is binding until a release of covenant is executed by the DEP Secretary (or designee) and is recorded in the land records of Escambia County. To receive prior approval from DEP to revise or remove any requirement herein, cleanup target levels established pursuant to Florida Statutes and DEP rules must have been achieved. This Declaration may be modified in writing only. Any subsequent amendment of any requirement must be executed by both Gulf and the DEP or their respective successors and assigns and be recorded by the owner as an amendment hereto.

7. This Declaration shall not be construed as constituting an admission with respect to any liability or responsibility for site rehabilitation.

8. If any provision of this Declaration is held to be invalid by any court of competent jurisdiction, the invalidity of such provision shall not affect the validity of any other provisions thereof. All such other provisions shall continue unimpaired in full force and effect.

9. Gulf covenants and represents that on the date of execution of this Declaration that Gulf is seized of the Property in fee simple and has good right to create, establish, and impose this restrictive covenant on the use of the Property. Gulf also covenants and warrants that the Property is free and clear of any and all liens, mortgages, or encumbrances that could impair Gulf's rights to impose the restrictive covenant described in this Declaration or that would be superior to the restrictive covenant described in this Declaration.

CITY OF PENSACOLA, FLORIDA
REQUEST FOR PROPOSALS

RFP NO. 25-008

DECOMMISSIONING AND DEMOLITION (D&D) CONTRACTOR FOR THE FORMER BAPTIST HOSPITAL COMPLEX

Sealed and complete hardcopy proposals **with original or electronic signature**, and **five (5) additional copies**, plus **one (1) complete and identical electronic copy (PDF)** on flash drive or CD, must be received no later than **February 17, 2025, 2:30 P.M.**, local time, at the following location:

City Hall (lobby)
222 West Main Street
Pensacola, Florida, 32502
Attention: Purchasing

The OUTER FACE of the sealed submittal package shall **identify the respondent, the RFP title, and the RFP number** (whether hand-delivered, mailed, or via UPS/FedEx or other courier service). Submittals received after the closing time will not be accepted. Multiple submittals from the same entity will not be accepted. Those submittals received will be opened and publicly read the **following business day** *(February 18, 2025, 10:00 A.M., local time)* via Microsoft Teams at the following link: Microsoft Teams proposal opening link.

Participation in a Microsoft Teams meeting requires a microphone and speakers; however, webcams are optional. Participants may join the meeting either via a PC or Smartphone. Please be sure to check the system requirements at the following link: Microsoft Teams System Requirements Check.

Specifications will be posted to the City's website at www.cityofpensacola.com/bids.aspx. **Addenda will be posted to the City's website. Proposers are responsible for obtaining addenda and are advised to check the website frequently.**

A **mandatory** pre-proposal **site tour** will be held at Former Baptist Hospital Complex, 1000 W Moreno Street, Pensacola, FL 32501, on **January 23, 2025, 9:00 A.M**. A notice of hazardous conditions will be included in the attendance sheet. **Only those who sign the attendance sheet will be allowed to participate in the pre-bid inspection.** Participation in the pre-bid inspection is required to bid on the project.

Proposers should submit a certified check, cashier's check, or insurance company's executed original bond, payable to the City of Pensacola in the amount of five percent (5%) of the base proposal amount for a period of ninety (90) days.

A proposal tabulation with a Notice of Intent to Award will be posted to the City's website at www.cityofpensacola.com/bids.aspx. Proposers are advised to check the website frequently.

Any questions concerning the proposal should be addressed and submitted in writing **no later than 10:00 A.M.**, local time, **January 30, 2025,** to:

Dedria Lunderman, Purchasing Manager
City of Pensacola
222 W. Main Street
Pensacola, FL 32502
purchasing@cityofpensacola.com

The City of Pensacola adheres to the Americans with Disabilities Act and will make reasonable accommodations for access to City services, programs, and activities. Please email ADACoordinator@cityofpensacola.com or call (850) 436-5600. Requests must be made at least 48 hours in advance of the event to allow the City time to provide the requested services.

The City of Pensacola reserves the right to accept or reject any or all proposals, to award proposals on a split-order basis by item number when applicable, to waive any proposal informalities and to re-advertise for proposals when deemed in the best interest of the City of Pensacola.

Attest:
Ericka L. Burnett
City Clerk

CITY OF PENSACOLA
D. C. Reeves
Mayor

The City of Pensacola provides equal access in employment and public services.

SECURITY NOTICE

Visitors to City Hall are required to stay in the lobby unless otherwise directed.

Late submittals will not be accepted.

RFP NO. 25-008

DECOMMISSIONING AND DEMOLITION (D&D) CONTRACTOR FOR THE FORMER BAPTIST HOSPITAL COMPLEX

1.0 INTRODUCTION

The City of Pensacola (City, or the "City") is soliciting proposals from qualified contractors interested in providing construction (demolition) services. This Proposal Package details the specific goals and responsibilities pertaining to the demolition of the Former Baptist Hospital Campus (FBHC) and disposal of associated FBHC-related debris located (herein referred to as "Work" or "demolition"). The main FBHC is located at 1000 W Moreno Street, Pensacola, Florida 32501, The FBHC Site is shown on Drawing FHBC-001 (included in Attachment A) and is herein referred to as the "Site".

1.1 SITE BACKGROUND

The FBHC consists of structures and parcels as shown on Drawing FBHC-002 included in Attachment A. The main hospital building is located at 1000 W Moreno St, Pensacola, FL 32501. The main hospital building, and North towers were vacated in 2023. The FBHC is believed to have been developed as Baptist Hospital in the 1950's.

General descriptions of the FBHC to be demolished as part of this contract are described below:

- **Main hospital building**: The main hospital building opened in 1951 and is in the central portion of the property, bounded by North E Street to the East and West Moreno Street to the south. The main hospital building is approximately 178,000 square feet area with five floors. Floor 1 is the most extensive floor of the building, which contains multiple areas including the registration area, cafeteria, emergency room, boiler room, laundry, shipping/receiving area, facilities, etc. Floors 2 through 5 were mostly utilized for different hospital units, offices, nursing stations, and patient rooms. The rooftop of floor 4 has a helicopter pad, with a fire suppression system. Ground mounted transformers are located near the northeastern corner of the main hospital building and east or the emergency room. Two (2) diesel fuel aboveground storage tanks (ASTs) were formerly located north of the power generation plant and one (1) aviation fuel AST was formerly located southeast of the emergency room. Multiple groundwater monitoring wells are present within this vicinity.

- **Medical Towers**: The north towers (i.e. Medical Towers) are medical offices located north of the main hospital building. There are three (3) buildings, which are connected on by a shared first floor and hallway. These towers are also connected to the Main Hospital Building. The towers have five floors each and were mainly used for offices and health clinics. There is also a pharmacy, laboratory, and radiology center on the first floor. Ground mounted transformers are located near the southeast corner of the northeast tower.

- **North Parking:** Paved parking areas are present in the northern portion of the site and are available as Contractor laydown and stockpile areas. Many subsurface utilities are present within the roads and right of ways.

1.1.1 Site Tour

The site tour is **mandatory**. As a condition of the site tour, each attendee must sign the pre-proposal attendance form acknowledging that they are aware of the hazardous conditions as indicated in Section 1.3.3 of the RFP. The site tour will consist of a group question and answer session, followed by the opportunity for contractors to walk into and around each building. Contractors can submit additional questions to the Purchasing Manager no later than 10:00 a.m., local time, January 30, 2025. City will not provide copies of RFP or other documents at site tour. Any drawings / documents must be brought by contractor. A maximum of **three (3) individuals per Contractor** will be allowed and **everyone must provide their own safety equipment** including N95 mask, hardhat, safety glasses, ear protection and closed toe shoes. Flashlights are also recommended for interior tours. Photographs are allowed. Contractors who are not in attendance will not be considered. Questions must be formally submitted in writing to the City within 7 days of the pre-proposal meeting.

1.2 HAZARDOUS MATERIALS ASSESSMENT

A series of Pre-Demolition Materials Surveys (Surveys) have been completed for the FBHC. During the Surveys, evidence of certain hazardous substance-containing building materials was identified at the FBHC. The following hazardous materials have been identified for pre-demolition removal and abatement activities:

- Asbestos Containing Materials (ACM)
- Lead-Based Paint (LBP)
- Polychlorinated Biphenyls (PCBs)
- Hazardous, universal and electronic waste (E-waste)
- Other Hazardous Substance-Containing Building Materials

Reports of these surveys are listed in Section 1.3.3 and included as part of this RFP.

1.3 REFERENCE MATERIALS

The following reference materials are provided as a part of this RFP and will become a part of the Contract documents.

1.3.1 Project Drawings

Drawing Number	Title
C01	Title Sheet
CO2	Existing Conditions
CO3	Tree Survey – North Parking Area
C04	Tree Survey – Main Hospital and Medical Towers
CO5	Tree Survey - Table

CO6	Proposed Conditions
CO7	Details I
CO8	Details II
CO9	Notes

The drawings are provided in Attachment A.

1.3.2 Environmental Assessments

- Phase I Environmental Site Assessment Baptist Hospital Main Property, Geosyntec Consultants, 11 September 2024
- Phase II Environmental Site Assessment Baptist Main Hospital Property, Geosyntec Consultants, 12 December 2024

These reports are provided in Attachment B.

1.3.3 Hazardous Materials Surveys

The Contractor is advised that surveys, studies and reports of the hazardous materials and ACM present at the site should be considered indicative of the locations, nature and quantities of materials and not a detailed inventory. The Contractor is responsible for removal and disposal of all ACM and other hazardous materials associated with demolition of the FBHC and should make their own independent volume assessments to support their lump sum proposal amounts. Limited hazardous materials surveys (due to occupancy at time of surveys) are provided in Attachment C and include the following:

- Limited Hazardous Materials Demolition Survey (Main Hospital Property) 1717 North E Street Pensacola, Escambia County, Florida, 14 April 2023
- Limited Hazardous Materials Demolition Survey (Towers Properties) 1717 North E Street Pensacola, Escambia County, Florida, 14 April 2023

The Contractor is advised that supplemental hazardous materials surveys are in progress for the Main Hospital Building and Medical Towers. Upon completion, these supplemental survey reports will be provided to Contractors as a Proposal Addendum.

1.3.4 Building Drawings

The available As-built drawings for the Main Hospital and the Tower Buildings are provided in Attachment D.

1.3.5 Baptist Hospital and Medical Towers Equipment Summary

A summary of available information on equipment remaining within the Main Hospital Building, and Medical Towers is provided as Attachment E. The Contractor is advised that this is not a detailed complete inventory.

1.3.6 Existing Monitoring and Water Supply Wells

Contractor shall perform the abandonment of monitoring wells and supply wells in compliance with Florida Department of Environmental Protection (FDEP) regulations, ensuring proper sealing, decommissioning, and documentation as required by applicable laws and guidelines. The available information related to groundwater monitoring wells and water supply wells to be decommissioned and abandoned by the Contractor are provided in Attachment F and discussed in Section 3.11.

2.0 PROPOSAL INSTRUCTIONS

The Contractor is required to provide a demonstration of its ability to successfully and safely complete the required Work. Proposal also must include a technical approach along with the lump sum cost amounts identified in the Proposal Form. The Contractor's proposal must provide sufficient detail and understanding of the project to allow the City to select the Contractor that the City decides provides the best value.

This project is being proposed on a lump sum basis with a breakdown of costs as described in the Proposal Form in Attachment G.

2.1 SUBMITTAL OF PROPOSAL

It is the responsibility of the Contractor to ensure that their proposal is received at the designated point of contact for the City by the due date. Proposals received after the above date and time will not be considered. All requested information must be included, or the proposal may be considered incomplete and not considered for evaluation and award. All timely received proposals will be tabulated, totaled, and checked for accuracy. All proposals submitted shall be binding for 90 calendar days from the due date. City reserves the right to request an extension of this time should more time be needed to perform proposal evaluations. All quotations and proposals must be signed by an officer or employee having authority to bind the contractor company or firm by his/her signature.

Any alterations, erasures, additions or omissions of required information or any changes of specifications or proposing schedule are done at the risk of the Contractor. Any proposal may be rejected that has a substantial variation. For example, a variation that affects the price, quality, or delivery date (when delivery is required by a specific time).

The City is not responsible for any expenses which proposers may incur in preparation and submittal of a proposal for this Work.

The Contractor is advised that following proposal submission, the City may change the scope of the demolition activities to be consistent with the available funding and schedule.

The Contractor shall receive and accept the compensation provided in the proposal and the Contract as full payment for furnishing all materials, labor, tools, and equipment for performing all operations necessary to complete the Work under the Contract, and also as full payment for all loss or damages arising from the nature of the Work, or from any discrepancy between the actual quantities of Work and quantities herein, or from the action of the elements, or from any unforeseen difficulties which may be encountered during the prosecution of the Work until the final acceptance by the City.

The City reserves the right to accept or reject any or all proposals or parts of proposals, to waive informalities and minor irregularities, and to accept any portion of the proposal or all items proposed in response to this RFP. Failure to provide all information or to follow the format requested in this RFP may disqualify the proposal package.

The City shall be the sole judge of its own best interest, the proposals, and the resulting agreement. The City anticipates award to the firm who submits the proposal judged by The City to be the most responsive and advantageous to the completion of this project.

2.2 PROPOSAL SUBMITTAL REQUIREMENTS

EVALUATION CRITERIA:

The following must be included with each submittal:

1. **Project Plan: (25 point)**

   Each Contractor shall provide a narrative describing the Contractor's technical approach to the project and should follow the elements described in Section 3, Section 4 and Section 6 of this RFP.

2. **Schedule: (10 points)**

   Contractor shall include a schedule in a Gantt Chart format showing the proposed sequence and schedule for the major milestones, including permitting, regulatory response time, task durations, etc. as described in Section 3.4.

3. **Hazardous Substances Removal and Abatement Plan: (20 points)**

   Contractor shall include plan in accordance with Section 3, Section 4 and Section 6 of this RFP.

4. **Project Team: (20 points)**

   - Staff Resumes: Contractor shall submit a resume for each of the proposed Project Manager, Superintendent, Safety Manager and other key staff to be assigned to this project.
   - Third-party Support: Contractor shall identify independent, third-party support to be provided for Noise, Dust and Stormwater Protection and Pollution Prevention Plan (SWPPP) monitoring and any independent structural engineering support to be provided in support of this project.
   - Subcontracting: Contractor shall provide a list of proposed subcontractors and vendors with their expected roles in the project.

5. **Disposal Location and Transportation Plan: (5 points)**

   Contractor shall provide details of planned disposal locations and details of any planned transportation subcontractor as described in Section 3.16.

6. **Site Specific Health and Safety Plan and Safety Statistics: (10 points)**

   Contractor shall provide their Site Specific Health and Safety Plan as well as a copy of its current Occupational Safety and Health Admiration (OSHA) statistics.

7. **Cost Estimates: (10 points)**

   Contractor shall submit a Proposal Form (Attachment G).

8. **Certification as or partnership with a Minority/Small/Women Business Enterprise (3 points)**: Indicate whether the firm is itself or is partnered with any City-certified Minority/Small/Women-Owned Business Enterprise.

9. **Certification as or partnership with a Veteran Business Enterprise (2 points)**: Indicate whether the firm is itself or is partnered with any City-certified Veteran-Owned Business Enterprise.

Required with submittal but not part of evaluation criteria:

10. **Licensure:** Contractor shall provide proof of a valid State of Florida General Contractor's license and/or Escambia County General Contractor certification as well as all other required licenses for this project.

11. **Insurance and Bonds:** Contractor shall submit proof of required insurance and bonds as described in Section 2.3.

2.3. INSURANCE AND INDEMNIFICATION

GENERAL

Before starting and until termination of work for, or on behalf of the **City**, the Contractor shall procure and maintain insurance of the types and limits specified.

The term City, as is used in this section, is defined to mean the City of Pensacola, itself, any subsidiaries or affiliates, elected and appointed officials, employees, volunteers, representatives and agents.

COVERAGE

Insurance shall be issued by an insurer whose business reputation, financial stability and claims payment reputation is satisfactory to the City, for the City's protection only. Unless otherwise agreed, the amounts, form and type of insurance shall conform to the following minimum requirements.

Worker's Compensation

The Contractor shall purchase and maintain Worker's Compensation Insurance Coverage for all Workers' Compensation as legally required. Additionally, the policy, or separately obtained policy, must include Employers Liability Coverage of at least $1,000,000 each person – accident, $1,000,000 each person – disease, $1,000,000 aggregate – disease.

Commercial General, Automobile, Contractor's Pollution Liability and Umbrella Liability Coverages

The Contractor shall purchase coverage on forms no more restrictive than the latest editions of the Commercial General Liability, Business Auto, and Contractor's Pollution Liability policies filed by the Insurance Services Office. **The City of Pensacola shall be an Additional Insured** and such coverage shall be at least as broad as that provided to the Named Insured under the policy for the terms and conditions of this Contract. The City shall not be considered liable for premium payment, entitled to any premium return or dividend and shall not be considered a member of any mutual or reciprocal company. **Unless specifically specified below, minimum limits of $10,000,000 per occurrence, and per accident, combined single limit for liability must be provided**, with umbrella insurance coverage making up any difference between the policy limits of underlying policies coverage and the total amount of coverage required. If the required limits of liability afforded

should become impaired by reason of any claim, then the Contractor agrees to have such limits of $10,000,000 per occurrence, reinstated under the policy.

Commercial General Liability coverage must be provided, including bodily injury and property damage liability for premises, operations, products and completed operations, independent contractors, and property damage resulting from, explosion, collapse or underground (x,c,u) exposures.

Business Auto Policy coverage must be provided, including bodily injury and property damage arising out of operation, maintenance or use of owned, non-owned and hired automobiles and employee non-ownership use. **Minimum limits of $1,000,000 combined single limit will be acceptable for this line of coverage.**

Contractor's Pollution Liability coverage for bodily injury, property damage, fines, penalties, defense, and clean up must be included. Coverage must include both sudden/accidental and non-sudden/gradual. Hazardous materials such as asbestos, lead, mold, fungi, mercury, polychlorinated biphenyls (PCBs), chlorofluorocarbons (CFCs), radioactive, and heavy metals must be included.

Umbrella Liability Insurance coverage shall not be more restrictive than the underlying insurance policy coverages.

CERTIFICATES OF INSURANCE

Required insurance shall be documented in the Certificates of Insurance which provide that the City shall be notified at least thirty (30) days in advance of cancellation, non-renewal or adverse change or restriction in coverage. **The City shall be named as an Additional Insured** and this contract shall be listed. If required by the City, the Contractor shall furnish copies of the Contractor's insurance polices, forms, endorsements, jackets and other items forming a part of, or relating to such policies. Certificates shall be on the "Certificate of Insurance" form equal to, as determined by the City, an ACORD 25. **Any wording in a Certificate which would make notification of cancellation, adverse change or restriction in coverage to the City an option shall be deleted or crossed out by the insurance carrier or the insurance carrier's agent or employee**. If on an ACORD 25 or similar form, the words "endeavor to" and "but failure..." shall be deleted so that the sentence ends with the word "left" or signed endorsements for the cancellation clauses MUST accompany Certificate(s) of Insurance. The Contractor shall replace any canceled, adversely changed, restricted or non-renewed policies with the new policies acceptable to the City and shall file with the City, Certificate of Insurance under the new policies prior to the effective date of such cancellation, adverse change or restriction. If any policy is not timely replaced, in a manner acceptable to the City, the Contractor shall, upon instructions of the City, cease all operations under the Contract until directed by the City in writing, to resume operations.

INSURANCE OF THE CONTRACTOR PRIMARY

The Contractor required coverage shall be considered primary, and all other insurance shall be considered as excess, over and above the Contractor's coverage. The Contractor's policies of coverage will be considered primary as relates to all provisions of the contract.

LOSS CONTROL AND SAFETY

The Contractor shall retain control over its employees, agents, servants, and subcontractors, as well as control over its invitees, and its activities on and about the subject premises and the manner in which such activities shall be undertaken and to that end, the Contractor shall not be deemed to be an agent of the City. Precaution shall be exercised at all times by the Contractor for the protection of all persons, including employees and property. The Contractor shall make special effort to detect hazards and shall take prompt action where loss control/safety measures should reasonably be expected.

HOLD HARMLESS

The Contractor shall indemnify and hold harmless the City of Pensacola, its officers and employees, from any and all liabilities, damages, losses, and costs, including, but not limited to, reasonable attorney's fees, to the extent caused by the negligence, recklessness or intentional wrongful misconduct of the Contractor and persons employed or utilized by the Contractor in the performance of this contract. The Contractor's obligation shall not be limited by, or in any way to, any insurance coverage or by any provision in or exclusion or omission from any policy of insurance.

PAY ON BEHALF OF THE CITY

The Contractor agrees to pay on behalf of the City, as well as provide a legal defense for the City, both of which will be done only if and when requested by the City, for all claims as described in the Hold Harmless paragraph. Such payment on the behalf of the City shall be in addition to any and all other legal remedies available to the City and shall not be considered to be the City's exclusive remedy.

GOVERNING LAW AND VENUE

This Contract is governed and construed in accordance with laws of the State of Florida. The law of the State of Florida shall be the law applied in the resolution of any claim, actions or proceedings arising out of the Contract. Venue for any claim, actions or proceedings arising out of this Contract shall be Escambia County, Florida.

3.0 TECHNICAL SPECIFICATIONS

3.1 SUMMARY SCOPE OF WORK

The Contractor shall provide facilities, plans, equipment, materials, labor, overhead, administration, and profit to satisfactorily perform the specified items. This summary provides the general sequence of demolition; however, the Contractor shall be solely responsible for the sequence of events. The Contractor shall be responsible for the following items under the terms and conditions or the Contract with The City.

The Scope of Work includes:

- attending pre-construction and other routine project meetings and providing regular progress reports and schedule updates.
- prepare all required submittals as identified in this RFP.
- obtaining all necessary permits, licenses and training to complete the project.
- identifying, removing, and legal disposition of all universal waste and hazardous substances (including but not limited to ACM, PCB waste, LBP, and other materials as may be encountered).
- utility locate, abandon (disconnect), and backfill.
- Draining of existing utility lines (i.e. cooling lines, water supply lines, wastewater lines, pressurized gases, etc.) and de-energizing any electrical systems.
- removing all existing materials, debris and shrub vegetation on immediately adjacent to the designated buildings down to the existing land surface and restoring any final grades to drain to existing drainage pathways.
- sweeping all dust and debris to create a clean and usable surface.
- constructing and maintaining a locked 6-ft chain-link construction fence around the perimeter of the Site which should include a man-door/gate and vehicle access; and,
- all other activities as may be required to comply with requirements described in this RFP.

3.2 PERMITTING – REGULATORY COMPLIANCE

It is the sole responsibility of the Contractor to be completely familiar with and to follow all local, state, and federal regulations pertaining to the Work. The Contractor shall be responsible to complete local building permit application and associated forms, coordinate and obtain the respective department approvals, and pay the appropriate permit fees. If additional assessment is potentially needed to support the permitting, that effort must be included in the Contractor's proposal.

3.3 STAFFING

Contractor to always have a designated, dedicated, Project Manager, Superintendent and Site Safety Manager onsite when working. Designated staff to be available by phone after working hours in case of emergency situations. Contractor shall advise City in advance of any proposed changes to the Project Manager, Superintendent and Site Safety Manager

3.4 SCHEDULE

The Demolition Schedule shall be prepared and maintained in Primavera P6 and shall include the proposed detailed sequence of demolition, stockpile, and load-out including anticipated start and end dates for each activity planned and critical path. The scheduled is to be resource loaded and is to be updated and submitted to the City monthly together with a brief monthly report summarizing progress in the reporting month, anticipated

progress in the following month, and any anticipated delays or potential impacts. Three-week lookahead schedules are to be submitted to the City on a weekly basis.

3.5 HEALTH AND SAFETY

Contractor is solely responsible for the health and safety of its employees and shall place the highest priority thereon. Contractor shall maintain a safe working environment during performance of the demolition activities. Contractor shall ensure its employees, and those of its lower tier subcontractors, comply with all applicable health, safety and security laws and regulations, including, without limitation, federal, state and local laws and regulations, City health and safety plans and City's site rules and regulations. At a minimum all its employees and those of its lower tier subcontractors who may encounter any ACM, Lead based paint or other Hazardous Materials must have completed 40-hour HAZWOPER training in accordance with 29 CFR 1910.120 and documentation of such be on file with the respective Contractor. Compliance with such requirements shall represent the minimum standard. Contractor shall be responsible for examining all requirements and determining whether additional or more stringent health, safety and security provisions are required for the Work and implementing them accordingly. Contractor shall immediately notify City of any unanticipated hazard or potential hazard which it encounters in connection with the Work.

The CHASP shall specify the actions that will be taken to meet the federal, state and local laws regarding labeling, storage, removal, transport and disposal of all hazardous or potentially hazardous substances

Contractor shall, at a minimum, furnish necessary personal protective equipment and other safety devices (“Health and Safety Equipment”), as required by applicable laws, regulations, and health and safety plans, and ensure that it is properly used and maintained.

Contractor shall, at its sole expense, comply with employee training and medical monitoring requirements as required by applicable laws, regulations, and health and safety plans. Contractor shall warrant that all personnel assigned to carry out the Work shall be fit and qualified.

The Contractor shall develop a site and activity-specific Contractor Health and Safety Plan (CHASP) that addresses the health and safety of all personnel involved with the Work. The CHASP shall identify health and safety issues present on the site and incorporate protective measures for Contractor personnel based on these conditions.

3.6 EMISSIONS AND STORMWATER CONTROL

The Contractor shall prevent creation of dust, air pollution, and stormwater runoff. At a minimum the Contractor shall:

- use temporary enclosures and other appropriate methods to limit dust and dirt rising and scattering in air to the lowest practical level.
- comply with local ordinances and rules regarding dust and odor emissions.
- store volatile liquids, including fuels and solvents, in closed containers.
- properly maintain equipment to reduce gaseous pollutant emissions.

The Contractor shall perform demolition operations in a way which minimize noise and shall comply with each of the local, state, and federal standards for noise.

If the allowable emissions (noise, dust, stormwater) are exceeded work will be stopped until corrective measures are implemented.

3.6.1 Air Monitoring

All activities, equipment, processes and work operated or performed in accomplishing the specified construction shall be in strict accordance with the applicable air pollution standards of the State of Florida (F.S. Chapter 403 – Environmental Control) and all Federal emission and performance laws and standards as applicable. This includes, but is not limited to, control of particulates, dust generated by or incidental to construction activities, and odors.

A qualified third party shall conduct dust monitoring throughout the demolition process in compliance with all applicable regulations, ensuring air quality standards are maintained and documented to protect public health and the surrounding environment.

Dust concentrations in the demolition area will be assessed through periodic (approximately hourly) monitoring by the Contractor using direct reading instruments such as a MiniRAM. Dust monitoring will be conducted at a minimum of four stations: (1) upwind of work activities (one station); (2) within the worker's breathing zone (minimum one station); and (3) downwind of the work activities (two stations). The locations of air monitoring stations will be modified as necessary based on the wind direction at the time of demolition activities.

If the particulate concentrations either within or downwind of the demolition area exceed the background level (i.e., upwind reading) by more than 50 µg/m3, (as required by the United Stated Environmental Protection Agency Clean Air Act, PM10 standards), then work will be restricted or suspended. It is noted that dust at a concentration of 50 µg/m3 is not visible to the human eye. Regardless of particulate monitor readings, visible dust emissions will be an indication that additional dust suppression is required. Operations may resume once appropriate dust suppression measures have been taken, such as wetting down the rubble with increased volume or application points of water spray.

Care will be taken with dust suppression water not to apply excessive water such that runoff is generated. The frequency of dust suppression activities will depend on monitoring results, demolition activities, and ambient conditions.

3.6.2 Noise Monitoring

In addition to noise monitoring to comply with relevant worker safety regulations Contractor shall install recording noise monitors at a minimum of four locations at the perimeter of the Site. Noise levels shall be maintained in compliance with all relevant City, County, and State requirements for work in residential areas and specific requirements in the Demolition Permit to be obtained by the Contractor.

3.6.3 Erosion and Sediment Control

The Contractor shall implement and maintain all required monitoring protocols to ensure compliance with local, state, and federal regulations, as well as the Stormwater Pollution Prevention Plan (SWPPP), including but not limited to erosion control, sediment management, water quality testing, and documentation as specified. The SWPPP is to be

prepared by the Contractor and guidance information for the SWPPP is provided on the project drawings to assist the Contractor in preparation of their SWPPP.

All stormwater and erosion control methods shall be in accordance with the FDEP Florida Stormwater, Erosion and Sedimentation Control Inspector's Manual. The Contractor shall prevent and control erosion and water pollution as per FDOT Specification Sections 104-1, 2, 3, 4, 6 and 7 and all applicable FDEP regulations and permit conditions.

The Contractor shall identify any hazardous or potentially hazardous substances to be used on the Site and indicate intended actions to prevent accidental or intentional introduction of these materials into the air, ground, water, wetlands or drainage areas.

Contractor shall engage an independent third-party consultant to carry out and report dust, noise, and stormwater monitoring. Contractor shall provide third-party monitoring reports to the City on a weekly basis.

3.6.4 Community Nuisance Management

Contractor is advised that the surrounding area is primarily residential, and contractor is responsible to maintain a positive relationship and proactively manage any "attractive nuisance" conditions and keep site and surrounding area free of demolition debris and Contractor generated trash.

3.7 PROJECT SET UP & WORK AREA DELINEATION

Upon mobilization, the Contractor will establish work zones, access routes, decontamination stations, laydown areas, and other work areas as necessary. Each work zone, area, or route will be reviewed with and approved by the City.

The Contractor will establish signage and other physical barriers as necessary to demarcate the work areas, warn facility personnel of the work activities, and prevent access of non-project personnel into the work area(s).

The Contractor will establish and maintain controls throughout the duration of the project to capture and/or manage fugitive emissions (i.e., equipment exhaust, dust, water, ACM, odors, etc.) from the work area(s) and prevent impacts to the facility and facility personnel.

All Contractor personnel will enter and exit the facility through a designated access points agreed between City and Contractor. Contractors will be expected to sign in and out at the front entrance at the beginning and end of each day.

The Site boundary shall be fenced during the Work. The fence shall be 6-feet high chain link fence. A man-door/gate and a vehicle access gate shall be constructed at locations agreed by City and Contractor. Privacy slats, hoarding, or other fence covering shall be provided as required by the approved Demolition Permit.

3.8 DEMOLITION

Contractor shall survey the condition of the building in accordance with OSHA CFR1926.859(a) to determine the sequence of safe demolition to prevent any unplanned collapse of any portion of the structure and management of ACM and other Hazardous Materials in accordance with regulatory requirements. Contractor shall retain, if necessary, a licensed and qualified engineer or structural engineer to provide analysis necessary to ensure the safe execution of the demolition Work. Sequencing of work and

demolition plans must be reviewed by City and approved by City before any work.

Explosives are prohibited for use on this project.

Contractor shall demolish the above-grade structures within the designated area completely (unless noted), leaving bare ground. All curbing, bollards, sheds, shrubs, etc., shall be removed and resulting pipes, voids, sump, etc., shall filled with concrete to provide a safe even surface for future Site use. Non-hazardous materials will be stockpiled and managed to prevent emissions of fugitive dust and to prevent storm water pollution. All stockpiled material shall be secured to prevent fugitive dust emissions and storm water pollution during off hours and weekends.

Contractor shall be responsible for maintaining a healthy work environment during the completion of the Work. This shall include daily safety briefings. Any existing equipment or materials damaged by the Contractor or its subcontractor shall be repaired or replaced as directed by City.

3.9 TERMINATION OF UTILITIES

Contractor will comply with applicable regulations in locating and providing clearance for all underground and above ground utilities prior to beginning demolition activities. Contractor shall notify City if other utility lines or structures, not shown on the drawings, are encountered. Repair of damage and all restitution for liability resulting from damage to existing facilities by the Contractor shall be at the Contractor's expense. Contractor shall identify all active and inactive utilities and verify that those utilities have been disconnected. All identified utilities shall be capped or decommissioned a minimum of 10-ft outside of the building footprint by the Contractor (and it is the responsibility of the Contractor to have utilities deactivated prior to the start of demolition). Backfill of utility excavations shall use certified clean fill materials approved by the City. Contractor should assume that backfill materials are not available onsite.

For fire protection purposes the Contractor is responsible to maintain the existing fire hydrants around the Site.

3.10 ELEVATORS AND OTHER OPERATING PLANT

The Contractor shall coordinate with the City for close out of the permits for all elevators and other permitted operating plant in the buildings.

3.11 WELL ABANDONMENT

Groundwater monitoring wells and water supply wells identified in Attachment F shall be to be decommissioned and abandoned by the Contractor in advance of other demolition activities.

Contractor is advised that there are surface indications of two additional groundwater monitoring wells near the aviation fuel lift station. There are no records available for these wells and they are to be abandoned by the Contractor.

A water supply well is located in the vicinity of the southeastern corner of the Main Hospital. There are no detailed records of this water supply well but it is understood to be on the order of 150 ft in depth. This water supply well shall be abandoned by the Contractor

Contractor shall perform the abandonment of monitoring wells and water supply wells in strict compliance with Florida Department of Environmental Protection (FDEP) regulations, ensuring proper sealing, decommissioning, and documentation as required by applicable laws and guidelines including FDEP Rule: 40D-3.531 and Subsection 62-532.500(5) of the Florida Administrative Code.

3.12 HAZARDOUS SUBSTANCES

Contractor shall identify, remove and properly dispose of all potentially hazardous materials and universal waste prior to demolition of the building. Hazardous building materials should be removed in a manner to reduce structural building concerns and limit dust and debris generation. Surrounding surfaces should be covered to reduce cross-contamination potential.

The Contractor has responsibility for determining the suitability of the completed Pre-demolition Materials Survey work to accurately scope, budget and complete the project. Indeed, if additional survey work is needed, the Contractor needs to include this in its proposal. There are no guarantees that the Pre-demolition surveys are complete detailed inventories of the extent of materials to be managed.

The available Hazardous Materials and ACM survey reports are provided in Attachment C.

Contractor will be required to prepare Waste Manifests for all relevant demolition debris and to coordinate with City for signature by the designated City representative before transportation from the Site.

All hazardous wastes shall be disposed of as required by law. Copies of relevant Material Safety Data Sheets (MSDSs) shall be appended to the Environmental Protection Plan, Safety Plan, Spill Prevention Plan, and Stormwater Pollution Prevention Plan (SWPPP).

In the event of any chemical discharges associated with Contractor's or subcontractor's activities, Contractor shall be responsible for reporting, assessment and remediation of such discharges in accordance with applicable federal, state or local regulations and/or guidelines including, but not limited to, 40CFR 264/265, Chapter 62-770, Florida Administrative Code (F.A.C.) and Chapter 62-780, F.A.C.

3.12.1 Asbestos Containing Materials (ACM)

Prior to demolition activities at the Site, the Contractor shall remove and legally dispose of all asbestos-containing materials (ACM), including NESHAP Category I Non-friable ACM, Category II Non-friable ACM, Regulated ACM (RACM), and materials containing less than 1% asbestos. All work shall be performed by a Florida-licensed Asbestos Contractor in full compliance with applicable federal, state, and local regulations.

3.12.2 Lead Based Paint and Lead Shielding

Abate areas coated with LBP prior to demolition activities at the Site and legally dispose of LBP waste. The Contractor's selected abatement method must be provided in its proposal. This should be done by trained personnel and in accordance with all federal, state and local regulations, including OSHA's lead regulation 29 CFR 1926.62. Also, prior to disposal, the entire waste stream from LBP abatement (paint, rags, protective suits, debris, etc.) must be characterized by toxicity characteristic leaching procedure (TCLP) analysis.

Contractor is advised that there is lead shielding installed in and around X-ray facilities in the Main Hospital Building and Medical Towers that will require proper management and disposal.

3.12.3 Polychlorinated Biphenyls (PCBs)

Light fixture ballasts manufactured through 1979 and those without a "No PCBs" label should be assumed to contain polychlorinated biphenyls (PCBs). The capacitor in the ballast may contain two to three ounces of PCBs. Potting compound (used to dissipate heat from electrical components in the ballast) may be made of waste oil contaminated by PCBs. The Toxic Substances Control Act of 1976 (TSCA) regulates disposal and storage of PCB Ballasts. Potential PCB containing ballasts have been identified in the Mona Hospital Building and the Medical Towers.

Although (PCBs) have not been specifically identified in other areas, the age and type of the building suggest their potential presence. The Contractor shall characterize, remove, and legally dispose of suspect PCB-containing building materials prior to performing any demolition activities at the Site. All work shall be performed by trained personnel in accordance with all applicable federal, state, and local regulations, including OSHA standards and PCB regulations outlined in 40 CFR 761.Hazardous Substance-Containing Materials.

Remove and legally dispose of other known or suspected hazardous substance-containing building materials prior to demolition activities at the Site. This should be done by trained personnel and in accordance with all federal, state and local regulations, including but not limited to TSCA regulations.

3.12.4 Universal Waste and Other Wastes

Florida universal wastes include rechargeable batteries; mercury-containing devices such as manometers and switches; mercury-containing lamps such as fluorescent lamps, aerosol cans and similar materials. These wastes shall be managed and disposed in accordance with Florida Rule: 62-730.185. Other wastes such as cathode ray tubes, smoke detectors, and residual hydrocarbons, solvents, cleaning materials and similar wastes shall be managed and disposed in accordance with relevant US EPA and State of Florida regulations.

3.12.5 Hydrocarbon Impacted Soils

Petroleum Hydrocarbon impacted soils have been identified in three areas as shown on Drawing FBHC-004 (Attachment A) and described in the Phase II ESA in Attachment B. These areas are:

- Former Underground Storage Tank (UST) Area:
- Former Backup Generator Shed:
- Helicopter Refueling Line:

Removal of the associated piping, the existing UST and associated soils is not a part of this Work and will be carried by Others out following demolition.

3.13 TREE PROTECTION

Trees identified on Drawing FHBC-003 (Attachment A) are to be protected during demolition activities using tree protection measures identified on the Project Drawings.

No work, equipment traffic or material storage is permitted within Tree protection zones.

3.14 WASTE MANAGEMENT

Contractor shall be responsible for fully characterizing materials to be disposed and obtaining all required Federal, State and local permits and licenses for the safe and proper handling, transporting and storage of any materials encountered at the site. All materials shall be transported to a disposal facility that complies with Federal, State and local department(s) of transportation regulations pertaining to licenses, permits and appropriate signage. Should the Contractor elect to utilize the services of subcontractor for hauling and transportation, it is the Contractor's responsibility to provide City with the subcontracted hauler's name, licensure and permits two (2) weeks prior to initiating demolition activities. On-site burning of any wastes is prohibited.

In its proposal, the proposer must identify all locations it intends to use for disposition (recycling and disposal) of waste generated from this project and include detailed information on the environmental compliance record of each facility; this should be done on or with the Proposal Form. During project implementation the selected Contractor shall (weekly) provide City with legible copies of all transportation and disposal/recycling documentation including but not limited to weigh tickets, bills of lading and manifests.

3.15 RECYCLING AND SALVAGE

To the extent possible, every reasonable attempt shall be made to recycle or salvage materials, if feasible and include consideration of recycling and salvage values in their proposals. The following items shall be considered for recycling:

- Concrete and concrete blocks.
- brick, tile, and masonry materials.
- ferrous metal.
- non-ferrous metals: copper, aluminum, etc.
- windows.
- doors.
- cabinets.
- millwork, paneling, and other similar interior finishes.
- electric fixtures, motors, switch gear, and other similar equipment.
- HVAC equipment, ducts, control systems, switches, and other similar equipment; and
- Gensets, pumps, and others as appropriate.

An inventory of equipment in the structures that should be considered for salvage or recycling is provided in Attachment E. Contractor is advised that this inventory is not complete and does not indication current condition.

3.16 SITE RESTORATION

Following demolition and load-out, Contractor shall sweep and clean the Site to remove

all dust and debris leaving a clean flat surface.

All bare soil areas left because of clearing vegetation or other above grade demolition shall be graded to drain and be revegetated with sod or other materials as approved by City.

Catch basins and other drainage features that remain around the site will be refurbished and restored to help manage runoff following demolition.

3.17 WORKING HOURS

Normal work hours are 6 AM local time through 7 PM local time, Monday through Saturday unless otherwise specified in the approved demolition permit.

3.18 EQUIPMENT MAINTENANCE

Contractor is advised that equipment Maintenance is to be done in a designated area onsite and ensure that lubricants and fuel are in either truck mounted tanks or if on the ground are in bunded area. Contractor shall be sole responsible for response and clean-up of any appalls or releases associated with their activities in accordance with the SWPPP.

4.0 WORK PLANS

The Contractor will develop Site-specific plans that they will use to guide their actions throughout the work. The plans will be of sufficient detail to address permitting requirements, allow the City to understand the Contractor's approach to the work, evaluate the risks and hazards associated with the work, describe the process for characterizing and managing waste and potential waste material, and provide contingency and "what if" planning for unexpected conditions.

Draft copies of all work plans will be submitted to the City and the City's representative for review, comment and approval prior to finalization. Work plan(s) will not be submitted to agencies, permitting authorities, or notifying entities without the express permission of the City.

4.1 SITE SPECIFIC HEALTH & SAFETY PLAN

The Contractor will develop a Site and activity-specific Health and Safety Plan (CHASP) that addresses the health and safety of all personnel involved with the work, including the Contractor's personnel and facility personnel. The CHASP will identify health and safety issues present on the Site and incorporate protective measures for personnel based on these conditions. The CHASP will address safety precautions and the need to halt work during unacceptable or adverse conditions to protect personnel and the facility. An Emergency Response Plan will also be developed by the Contractor and implemented in conjunction with the CHASP.

The CHASP and the work performed under the CHASP will be undertaken with and consistent with the most current guidelines and references and in compliance with all applicable regulations and standards including, but not limited to, those listed below.

- Occupational Safety and Health Administration (OSHA) Publications:
  - 29 CFR § 1910 General Industry Standards.

- 29 CFR § 1915.100 Air Contaminants.
- 29 CFR § 1926 Construction Industry Standards.

- National Institute of Occupational Safety and Health (NIOSH) Publications:
  - 85-115 Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities.
- American Conference of Governmental Industrial Hygienists (ACGIH) Publications:
  - Threshold Limit Values and Biological Exposure Indices.
- American National Standards Institute (ANSI).

In the case that these requirements are conflicting, the one which offers the greatest protection will be followed.

Should any unforeseen hazard become evident during the performance of the work, the Contractor will bring such hazard to the attention of the City for resolution as soon as possible. The Contractor will take necessary action to re-establish and maintain safe working conditions to safeguard Contractor and facility personnel, visitors and the environment. As necessary the HASP will be modified to incorporate the previously unforeseen hazard.

The CHASP will be reviewed and commented upon by the City and City's representative prior to finalization. Modification of the CHASP will be performed in writing and reviewed and commented upon by the City and the City's representative prior to finalization.

4.2 HAZARDOUS MATERIAL SURVEY & MATERIAL MANAGEMENT PLAN

Upon award, the Contractor will develop a Material Management Plan using information obtained from the available reports and the Contractor's own observations performed during Site inspections. The Material Management Plan will be specific and accurate for the specific Site conditions. The plan will discuss, in detail, the equipment, personnel, and methods used for categorizing, characterizing, removing, handling, preparing, cleaning/decontaminating, containerizing, and transporting and disposing of the materials anticipated to be encountered throughout all phases of the demolition.

It will provide guidance and direction of the safe removal, handling, characterization, management, and disposal of identified waste materials as deemed necessary for safe management in accordance with the CHASP, standard of care and industry guidance, waste management rules and regulations, or as necessary to ensure facility personnel safety. The Material Management Plan will comply with the requirements of OSHA and any other regulatory agency with purview over the work and will include the development of the Notification of Demolition and/or Asbestos Renovation, as necessary.

4.3 CONTRACTOR DEMOLITION AND SEQUENCING PLAN

The Contractor will develop a Site and activity-specific Demolition Plan for the work. The plan will discuss, in detail, the equipment, personnel, and methods used for all phases of the demolition. This will include, but is not limited to:

- site setup, containment, and other operational, safety, and security processes undertaken to manage the demolition.
- Identification, removal and disposal all universal waste and hazardous substances (including but not limited to ACM, PCB waste, LBP, and other materials as may be encountered).
- Identification, draining of existing utility lines (i.e. cooling lines, water supply lines, wastewater lines, pressurized gases, etc.) and de-energizing any electrical systems
- lock out/tag out processes, including verification and de-energizing procedures.
- demolition processes for each general component of the work including breakdown/disassembly, material handling, and sizing processes.
- characterization and segregations of the various waste streams including testing and management.
- final area clean-up, restoration, revegetation, verification, and inspection.

The Contractor's Decommissioning and Demolition Plan will be reviewed by the City prior to finalization and submission for City approval.

4.4 STORMWATER AND POLLUTION PREVENTION PLAN (SWPPP)

Prior to any site activities, the Contractor will develop a SWPPP describing the approach to managing stormwater and other runoff from the Site during, and following, the demolition activities. The Contractors SWPPP shall comply with the requirements described in Section 3.6.3 as well as all relevant regulatory and permit requirements.

The Contractor's SWPPP will be reviewed by the City prior to finalization and submission for City approval.

4.5 OTHER PLANS

The Contactor will develop other plans and necessary by permit or regulation or as deemed necessary to guide and conduct the work in accordance with all applicable rules and regulations.

5.0 CITY'S REPRESENTATIVE

The City will provide onsite observation of Contractor's work during the demolition of the FBHC. The following will be provided by City onsite observation team to the City in support of the demolition work activities:

- Field observation during the completion of the Work.
- Review of Contractor schedule, submittals (including invoices), and milestones.
- Preparation of daily field log summarizing the daily demolition activities including any subcontractors that were onsite, waste disposal activities, and
- Preparation of weekly construction reports that will provide a summary on the demolition activities for the week.

The Contractor will provide a dedicated onsite trailer and facilities for the City's

Representative including electricity, drinking water, portable toilet, desk, filing cabinet, and other necessities including weekly servicing and cleaning.

6.0 SUBMITTALS

For the project, the following shall be submitted to the City in sufficient detail to show full compliance with the proposed Work.

6.1 PRE-CONSTRUCTION SUBMITTAL

Contractor will submit for the City's review and approval, the following within 14-days of Notice to Proceed:

- Contractor shall provide a Structure Demolition, Recycling and Disposal Plan (SDRDP) that includes:
    - Demolition Schedule and Site Layout Plan. The Demolition Schedule must include the proposed detailed sequence of demolition, stockpile, and load-out including anticipated start and end dates for each activity planned.
    - The Site layout will present the traffic control plan and debris stockpile locations to ensure that the Contractor is able to complete the scope within the Site boundary.
    - Hazardous Material Abatement Plan presenting the sequence of Work, schedule, and waste disposal plan including estimated volumes, transportation and final disposal site of hazardous/universal waste materials. ***Contractor shall specify (name, address and contact) for each disposal facility being proposed.*** The City will ultimately approve the disposal facility prior to disposal. Contractor shall not store hazardous materials on-Site including oils or solvents. Equipment can be fueled using portable re-fueling equipment incorporating best management practices. Re-fueling activities shall be addressed in the SWPPP and spill kits made readily available on-Site. Other then re-fueling and routine grease maintenance, NO equipment maintenance activities will be performed on-Site.
    - An inventory and anticipated tonnage and volume estimate of recyclable materials and waste materials (including ACM and other hazardous wastes) that will be generated during the project. Contractor shall incorporate waste minimization efforts to reduce the volume of waste that is shipped off-site for disposal at a landfill.
    - Dust, Noise, and SWPP control measures and third-party monitoring.
    - Plan for capping, abandoning and backfilling utilities.
    - SWPPP for the demolition activities, stockpiles and loadout activities. The SWPPP will also detail how the Site will be secured during non-working hours and weekends to prevent stormwater impacts.
    - Well abandonment Plan
    - Tree protection Plan

- Site Restoration Plan including cleanup activities, revegetation of bare ground, site drainage and perimeter security fencing.
- CHASP with Emergency Plan describing emergency measures, contacts and any personal protection equipment (PPE) for workers during the project. The plan should distinguish the necessary controls required for the pre-demolition activities (hazardous material abatement and buried utility abandonment), demolition activities and the Site restoration.
    - Contractor shall provide safeguards, warning signs, barricades, temporary fencing or other items required for the protection of personnel during the demolition and removal operations.
    - Water and sanitary facilities are not available at the Site and shall be provided by the Contractor and included in the CHASP.

6.2 CONSTRUCTION SUBMITTALS

The Contractor shall assist the City's oversight in the creation of the Weekly Report for submittals to the City. Additionally, the Contractor shall provide the following information:

1. Tracking daily demolition activities through a daily field log, and
2. Updates on the schedule during a weekly construction meeting including amount of waste removed (universal and hazardous) as well as the demolition plan for the following week, and
3. Safety submittals as required in the Contractors approved CHASP. and
4. Notification when approximately 60%, 90%, and 100% of the total building is demolished.

6.3 POST-CONSTRUCTION SUBMITTALS

Following the completion of demolition and acceptance of the final conditions of the Site, the Contractor shall provide:

- Final waste manifests with disposal facility signatures.
- Final copy of building permit close out documentation (i.e., release of lien forms, final permit close out documentation);
- Release of lien when the final payment is received; and,
- Final copy of utility close out documentation.

PURCHASING GENERAL CONDITIONS

To ensure acceptance, all proposers submitting proposals to the City of Pensacola shall be governed by the following conditions, attached specifications, and proposal form(s) unless otherwise specified. Proposals not submitted on the proposal form(s) provided shall be rejected, and proposals not complying with these conditions will be subject to rejection. **Multiple submittals from the same entity will not be accepted.**

1. **Alternate Solutions:** During the drafting of written specifications, a sincere effort is made to describe items or services best suited to the needs of the City. However, the City invites proposals with alternate solutions to the objectives set forth in the specifications, unless a particular specification is expressly identified as mandatory.

2. **Approved Equivalents or Equals:** Any manufacturer's names, trade names, brand names, model numbers, etc. listed in the specifications are for information only and not intended to limit competition. The proposer may offer any brand for which he is an authorized representative which meets or exceeds the specifications as written. If the proposal is based on an "approved equivalent or equal" item(s) or service(s), supportive information in the form of the manufacturer's printed literature or brochures, sketches, diagrams, and/or complete specifications must accompany the proposal. The proposer must explain in detail the reasons why the proposed equivalent or equal will meet specifications and not be considered an exception thereto. The City of Pensacola reserves the right to determine acceptance of proposed equivalent or equal item(s) or service(s).

3. **Award Determination to be Based on Best Interest of City:** There is no obligation on the part of the City to award a contract to any proposer. The City reserves the right to award a contract to or negotiate a contract with a responsible proposer submitting the most responsive or best alternative proposal for a resulting contract which is most advantageous to and in the best interest of the City. The City shall be the sole judge of the proposal and the resulting contract, and its decision shall be final.

4. **Proposal (RFP) Bond: The particular item(s) or service(s) outlined within the attached specifications require(s) that a certified check, cashier's check, or insurance company's executed bond made payable to the City of Pensacola accompany your proposal as specified in the solicitation. To ensure its prompt return, please include the company's name and return address on the face of your good faith check or draft.** Checks or drafts accepted as good faith deposits will be retained within the City's Finance Department until award and execution of contract is complete, or until a purchase order is issued to the successful proposer. Any proposer withdrawing his proposal after the proposal opening forfeits the right of return of his good faith deposit.

5. **E-Verify System (Mandatory):** In compliance with the provisions of F.S. 448.095, the parties to this contract and any subcontractors engaged in the performance of this contract hereby certify that they have registered with and shall use the E-Verify system of the United States Department of Homeland Security to verify the work authorization status of all newly hired employees, within the meaning of the statute.

6. **Exceptions to Specifications:** In order that equal consideration be given in evaluating proposals, any exceptions to or deviations from the specifications as written must be noted and fully explained. The Mayor or City Council is the final authority in determining the acceptability of any exceptions to specifications.

7. **Governing Law:** The laws of the State of Florida shall be the laws applied in the resolution of any action, claim or other proceeding arising out of this contract.

8. **Interpretations:** All questions concerning the specifications or conditions shall be directed in writing to the Purchasing Office at least ten (10) days prior to submittal deadline, unless otherwise instructed on the Request for Proposals Page. Inquiries must refer to the proposed item(s) or service(s) and the date of the proposal submittal deadline. Interpretations will be made in the form of an addendum placed on the City's website. The City shall not be responsible for any other explanation or interpretation.

9. **Legal Requirements:** All applicable provisions of Federal, State, County, and local laws including all ordinances, rules, and regulations shall govern the development, submittal and evaluation of all proposals received in response to these specifications, and shall govern any and all claims between person(s) submitting a proposal response hereto and the City of Pensacola, by and through its officers, employees and authorized representatives. A lack of knowledge by the proposer concerning any of the aforementioned shall not constitute a cognizable defense against the legal effect thereof. The proposer agrees that it will not discriminate on the basis of race, creed, color, national origin, sex, age or disability.

10. **Licenses, Registration and Certificates:** Each proposer shall possess at the time of submitting its proposal all licenses, registrations and certificates necessary to engage in the business of contracting (or special contracting if the work to be performed necessitates a particular type of specialty contractor) in the City of Pensacola. Proposer must also possess all licenses, registrations and certificates necessary to comply with federal, state and local laws and regulations. The awarded proposer shall be registered at the time of contract execution as an active vendor with the Florida Department of State, Division of Corporations (www.sunbiz.org).

11. **Mistakes:** Proposers are expected to examine the conditions, scope of work, proposal prices, extensions, and all instructions pertaining to the item(s) or service(s) involved. Failure to do so will be at the proposer's risk. Unit prices proposed will govern in award.

12. **Payment of Invoices:** The City of Pensacola issues checks for payment of invoices on the 10th of each month. The signed receiving copy of the purchase order and a correct invoice must have been received by the Accounts Payable Activity prior to the 4th of the month. Item(s) or service(s) received on or after the 4th will be processed in the following month. All invoices are payable by the City under the terms of Florida Prompt Payment Act, Florida Statute §218.70. All purchases are subject to availability of funds in the City's budget.

13. **Permits and Taxes:** The proposer shall procure all permits, pay all charges, fees, and taxes, and give all notices necessary and incidental to the due and lawful prosecution of the work. Proposers who use public roads of the City of Pensacola, Florida for transport of goods of any kind which said goods were transported from a point without the City of Pensacola, Florida to a point within the City of Pensacola shall obtain a "Use of Streets" permit for a fee not in excess of the license paid for by local licensees engaged in the same business.

14. **Prohibited Conduct by Proposers:** Upon the publication of any solicitation for sealed bids, requests for proposals, requests for qualifications, or other solicitation of interest or invitation to negotiate by any authorized representative of the City of Pensacola, any party interested in submitting a bid, proposal, or other response reflecting an interest in participating in the purchasing or contracting process shall be prohibited from engaging in any communication **pertaining to formal solicitations** with any member of Pensacola City Council, the Mayor, or any member of a selection/evaluation committee for RFPs/RFQs, whether directly or indirectly or through any representative or agent, whether in person, by mail, by facsimile, by telephone, by electronic communications device, or by any other means of communication, until such time as the City has completed all action with respect to the solicitation.

15. **Proposal Withdrawals:** No proposal may be withdrawn after closing time for receipt of proposals for a period of sixty (60) days thereafter. The contract award shall be legally binding at the time of award by City Council or Mayor.

16. **Protests:** Protests of the plans, specifications, and other requirements of requests for proposals must be received in writing by the Purchasing Office at least ten (10) business days prior to the scheduled proposal submittal deadline. A detailed explanation of the reason for the protest must be included. Protests of the intended award of proposal or contract must be in writing and received in the Purchasing Office within five (5) business days of the notice of intent to award. A detailed explanation of the protest must be included.

17. **Public Entity Crimes:** By submitting a proposal each proposer is confirming that the company has not been placed on the convicted vendors list as described in Florida Statute §287.133 (2) (a).

18. **Public Records:** Any material submitted in response to this Request for Proposal will become a public document pursuant to Florida Statute §119.07. This includes material which the responding proposer might consider to be confidential or a trade secret. Any claim of confidentiality is waived upon submission, effective after opening the proposal pursuant to Florida Statute §119.07.

19. **Public Records Law:** The Parties shall each comply with Florida Public Records laws. The Parties hereby contractually agree that each Party shall allow public access to all documents, papers, letters, or other public records as defined in Chapter 119, Florida Statutes, made or received by either Party in conjunction with this agreement,

or related thereto, unless a statutory exemption from disclosure exists. Notwithstanding any provision to the contrary, it is expressly agreed that Contractor's failure to comply with this provision, within seven (7) days of notice from the City, shall constitute an immediate and material breach of contract for which the City may, in the City's sole discretion, unilaterally terminate this agreement without prejudice to any right or remedy.

20. **Rejection of Proposals:** The City of Pensacola reserves the right to accept or reject any or all proposals, to award proposals on a split-order basis by item or service number, to waive any irregularities, technicalities, or informalities, and to re-advertise for proposals when deemed in the best interest of the City of Pensacola.

21. **Sealed Proposals:** The specifications and all executed proposal forms must be submitted in a sealed envelope. All proposals must be signed by an authorized representative of the proposer. In the event more than one proposal submittal deadline is scheduled for the same date and time, do not include proposals concerning different sets of specifications within the same envelope. **The face of the sealed envelope shall be plainly marked identifying the proposer, the item(s) or service(s) proposed and the proposal number.** It shall be the sole responsibility of the proposer to assure receipt of proposal at the Purchasing Office prior to the published time for the proposal submittal deadline. No proposal will be accepted after closing time for receipt of proposals; **nor will any offers by telephone, fax, internet or email be accepted.**

22. **Tax:** The City of Pensacola is exempt from all State and local sales tax.

23. **Termination for Convenience:** A contract may be terminated in whole or in part by the City at any time and for any reason in accordance with this clause whenever the City shall determine that such termination is in the best interest of the City. Any such termination shall be effected via delivery to the contractor at least thirty (30) business days before the effective date of a Notice of Termination specifying the extent to which performance shall be terminated and the date upon which termination becomes effective. An equitable adjustment in the contract price shall be made for the completed service, but no amount shall be allowed for anticipated profit on unperformed services.

24. **Unauthorized Aliens:** The City of Pensacola shall consider the employment by any contracted vendor of unauthorized aliens a violation of Section 274A of the Immigration and Nationality Act. Such violation shall be cause for unilateral termination of this contract.

25. **Venue:** Venue for any claim, action or proceeding arising out of this contract shall be Escambia County, Florida.

ANY AND ALL SPECIAL CONDITIONS AND SPECIFICATIONS ATTACHED HERETO WHICH VARY FROM THESE GENERAL CONDITIONS SHALL HAVE PRECEDENCE.

DEFINITIONS

Mobilization – All work associated with mobilization to Site and establishing required facilities, staff, and Contractor infrastructure.

Permitting – All work associated with required permitting and regulatory approvals as described in Section 3.2.

Pre Demolition Submittals – preparation of all submittals required for execution of the Work inclusive of supporting calculation packages, work method statements, safety plans, Demolition plans, CHASP, Plan, and other required documents.

Site fencing and Security – Installation and maintenance of required Site perimeter fencing and required security in accordance with Section 3.8 of this RFP.

Interior Demolition – Demolition, removal, processing, and offsite disposal of all remaining furnishings, partition walls, utilities, fixtures, and all other non-structural components in accordance with the Contractors approved Demolition Plan. Includes removal of all fixtures and floor covering on the ground floor, or other lowest floor, level.

Structure Demolition - Demolition, removal, processing, and offsite disposal of all structural components and remaining building components after Interior Demolition down to the top of floor slab elevation in accordance with the Contractors approved Demolition Plan.

Foundation, substructure and utility removal within building footprint – Demolition, removal, processing, and offsite disposal of the floor slab, foundation elements, substructures and utilities within the defined work area as shown on the project drawings.

ACM Abatement and Disposal - Abatement, removal and disposal of ACM in accordance with Section 3.13.1 of this RFP.

Lead Paint Abatement and Disposal - Abatement, removal and disposal of LBP in accordance with Section 3.13.2 of this RFP.

PCB Abatement and Disposal - Abatement, removal and disposal of PCB in accordance with Section 3.13.3 of this RFP.

Other HazMat Abatement and Disposal - Abatement, removal and disposal of other hazardous or scheduled wastes in accordance with Section 3.13.4 of this RFP.

RFP NO. 25-008
DECOMMISSIONING AND DEMOLITION (D&D) CONTRACTOR FOR THE FORMER BAPTIST HOSPITAL COMPLEX

PROPOSAL
(page 1)

Company Name:_____

The prices stated in the Bid Form include all costs and expenses for taxes, labor, equipment, materials, commissions, transportation charges and expenses, patent fees and royalties, labor for handling materials during inspection, together with any and all other costs and expenses for performing and completing the Work.
The Contractor's attention is again called to the fact that the quotations for the various items of Work are intended to establish a total price for completing the Work in its entirety and that the Contractor is familiar with prevailing weather conditions at the Site during the planned work period.
Should the Contractor feel that the cost for any item of the Work has not been established by the Bid Form or Basis of Payment, the cost for that Work shall be included by Contractor in some other applicable bid item, so that Contractor's proposal for the project does reflect his total price for completing the Work in its entirety.

State of Florida
Affidavit Regarding the Use of Coercion for Labor and Services
Pursuant to Florida Statute 787.06(13)

Vendor Name: _____

Vendor FEIN: _____ Phone Number: _____

Vendor's Authorized Representative Name and Title: _____

Address: _____

City: _____ State: _____ ZIP: _____

Email Address: _____

Section 787.06(13) Florida Statutes requires all nongovernmental entities executing, renewing, or extending a contract with a governmental entity to provide an affidavit signed by an officer or representative of the nongovernmental entity under penalty of perjury that the nongovernmental entity does not use coercion for labor or services.

The undersigned hereby certifies that he/she is an officer or authorized representative of the vendor identified above and that said vendor does not use coercion for labor or services as defined in Section 787.06 Florida Statutes.

Florida Statute 787.06

(2)(a) "Coercion" means:

1. *Using or threatening to use physical force against any person;*
2. *Restraining, isolating, or confining or threatening to restrain, isolate, or confine any person without lawful authority and against her or his will;*
3. *Using lending or other credit methods to establish a debt by any person when labor or services are pledged as a security for the debt, if the value of the labor or services as reasonably assessed is not applied toward the liquidation of the debt, the length and nature of the labor or services are not respectively limited and defined;*
4. *Destroying, concealing, removing, confiscating, withholding, or possessing any actual or purported passport, visa, or other immigration document, or any other actual or purported government identification document, of any person;*
5. *Causing or threatening to cause financial harm to any person;*
6. *Enticing or luring any person by fraud or deceit; or*
7. *Providing a controlled substance as outlined in Schedule I or Schedule II of s. 893.03 to any person for the purpose of exploitation of that person.*

(2)(e) "Labor" means work of economic or financial value.

(2)(h) "Services" means any act committed at the behest of, under the supervision of, or for the benefit of another. The term includes, but is not limited to, forced marriage, servitude, or the removal of organs.

Under penalties of perjury, I declare that I have read the foregoing document and that the facts stated in it are true.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

1. The Submitter certifies, to the best of its knowledge and belief, that the Submitter and/or any of its Principals:
   A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.
   B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and
   C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.
2. The Submitter has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.
   A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

      This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.
   B. The Submitter shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Submitter learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
   C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Submitter's responsibility. Failure of the Submitter to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Submitter nonresponsive.
   D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Submitter is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
   E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Submitter knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

VETERAN BUSINESS ENTERPRISE STATEMENT

In order to foster economic development and business opportunities for service- disabled veterans and wartime veterans who have made extraordinary sacrifices on behalf of the nation, the City of Pensacola has adopted a Veteran Business Enterprise ("VBE") Preference. For further information regarding this program, please refer to Section 3-3-12 AND 3-3-13 of the Code of the City of Pensacola.

In order for a respondent to receive credit for being VBE vendor, it must perform useful business functions on the contract, have its principal place of business in Escambia or Santa Rosa County and be certified as a veteran business enterprise by the State of Florida Department of Management Services ("DMS") as set forth in Section 295.187 of the Florida Statutes as of the date set for submittal of bids. For purposes of the City's VBE Program, the respondent's principal place of business must be within Escambia County, FL, or Santa Rosa County, FL.

There shall be no third-party beneficiaries of the Veteran Business Enterprise Preference provisions of this solicitation or resulting contract. The City of Pensacola shall have the exclusive means of enforcement of the Veteran Business Enterprise Preference Ordinance and any contract terms. The City of Pensacola is the sole judge of compliance. All solicitations and submittals awarded will be evaluated in accordance with the Code of the City of Pensacola.

If the Respondent is a qualifying VBE, please complete the boxes below:
If not, please mark N/A.

Respondent's Name:	Respondent's Principle Place of Business	Florida Certification Number as issued by State of Florida DMS:

<u>THIS FORM MUST BE SUBMITTED WITH RESPONSE.</u>

MINORITY AND WOMEN BUSINESS ENTERPRISE STATEMENT

The City has implemented a Minority/Women Business Enterprise (MWBE) program to assist certified minority- and women-owned businesses with identifying and participating in City of Pensacola procurement and construction opportunities as set in the Code of the City of Pensacola, Ordinance No. 4-15.

In order for a respondent to receive credit for being a MWBE vendor, it must perform useful business functions on the contract, have its principal place of business in Escambia, Santa Rosa, Okaloosa, Walton County in Florida or Mobile, Alabama, and have received a certification letter issued from the City of Pensacola.

There shall be no third-party beneficiaries of the Minority and Women Business Enterprise provisions of this solicitation or resulting contract. The City of Pensacola shall have the exclusive means of enforcement of the Minority and Women Business Enterprise Ordinance and any contract terms. The City of Pensacola is the sole judge of compliance. All solicitations and submittals awarded will be evaluated in accordance with the Code of the City of Pensacola.

Respondent's Name:	Respondent's Principal Place of Business

CITY OF PENSACOLA
SMALL BUSINESS ENTERPRISE STATEMENT

The Pensacola City Council adopted a Small Business Enterprise Ordinance #61-89. This ordinance encourages participation of small business in the City procurement process. Participation goals will be provided on a project-by-project basis, based on the availability of certified small businesses.

> **A Small Business is defined as an independently owned and operated business employing 50 or fewer permanent full-time employees and having a net worth of not more than $1 million. The business must be located in Escambia or Santa Rosa County.**

You must provide the following information sought in the accompanying forms for your submittal to be considered responsive:

RFQs **with** a specified Small Business Enterprise (SBE) goal will include a Bidder Questionnaire, Sub-contractor Solicitation, SBE Intent to Perform as a Sub-contractor and SBE Participation forms.

RFQs **without** a specified Small Business Enterprise (SBE) goal will include a Bidder Questionnaire form only.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE BIDS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more bids which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a bid received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie bids will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2) Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).

4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5) Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6) Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

FORM OF CONTRACT

(following pages)

CONTRACT BETWEEN CITY OF PENSACOLA AND [xxxCONTRACTORxxx]
BASED UPON REQUEST FOR PROPOSALS #_____

THIS CONTRACT ("Contract") is made this ___ day of _____, 20__, by and between the City of Pensacola ("City"), a Florida municipal corporation created and existing under the laws of the State of Florida, located at 222 W. Main Street, Pensacola, Florida 32502, and _____, ("Contractor"), a corporation authorized to do business in Florida, located at _____, (the City and Contractor collectively referred to hereinafter as the "Parties").

WITNESSETH:

WHEREAS, the City solicited for Request for Proposals #_____, on _____, 20__ ("RFP"), for _____, as modified by any addendum to the RFP ("Addenda"), all as attached hereto as Exhibit A and incorporated herein by this reference (collectively referred to hereinafter as the "RFP Documents"); and

WHEREAS, in response to the RFP Documents, the Contractor submitted to the City a proposal dated _____, 20__, attached hereto as Exhibit B and incorporated herein by this reference; and

WHEREAS, the City has awarded the Contract to the Contractor; and

WHEREAS, the Parties desire the Contractor to perform as described in the RFP Documents and the Proposal and pursuant to the terms and conditions of this Contract; and

WHEREAS, the Parties desire to enter into this Contract;

NOW, THEREFORE, in consideration of the work to be performed and the payment for the performance of the work, of the mutual covenants and benefits contained herein, and for other good and valuable consideration, the Parties agree as follows:

Section 1. Recitals.
The recitals contained above are true and correct and are incorporated into this Contract.

Section 2. Contractor's Obligations.
The Contractor shall perform all work and services described in, and in accordance with, the Contract. The Contractor warrants that all equipment, materials, and workmanship furnished, whether furnished by Contractor or its subcontractors or sub-suppliers, will comply with the Contract and any City specifications, drawings, and other descriptions

supplied or adopted. The Contractor further warrants that the supplies and workmanship will be new, fit, and sufficient for the purpose for which they are intended, of good materials, design, and workmanship, and free from defects or failure. The City or its duly authorized representative shall at all times have full opportunity to inspect the materials to be furnished and the work to be done under this Contract. The Contractor shall comply with all applicable federal, state, and local laws, ordinances, rules, and regulations pertaining to the performance of this Contract. The Contractor is responsible for and shall indemnify the City against all damage or loss caused by fire, theft, or otherwise to materials, tools, equipment, and consumables left on City property by the Contractor.

Section 3. Term of Contract.
Subject to the right of termination for cause or convenience, the term of this Contract shall be as specified in the attached Quote Documents and Proposal.

Section 4. Payment.
The Contractor agrees to perform all work and services in Section 2 and to furnish all necessary labor, materials, equipment, machinery, tools, apparatus, and means of transportation related to such work and services at Contractor's sole cost and expense, in consideration of the total amount of _____ ($_____) to be paid by the City in accordance with the Contract upon the complete performance by Contractor based on unit prices if applicable, or based on partial payments approved by the City, only after written acceptance by the City pursuant to the Contract, and such payment in accordance with the Florida Prompt Payment Act. In the event that the Contractor does not fully perform its obligations under the Contract, the City reserves the right to withhold payments for work not performed, to engage an alternative contractor to complete work not performed, and to withhold such amounts as may be required to hold the City harmless from any claims or damages, direct, indirect or consequential, that may be sustained on account of the Contractor's acts or omissions in the performance of this Contract.

Section 5. Bond.

Is a bond required? (___) Yes (___) No

If yes: Contractor shall provide all bond(s) as required in the Contract. Should the City in the City's sole discretion at any time deem any of the sureties upon such bond to be unsatisfactory or if for any reason such bond shall cease to be adequate security for the City, the Contractor shall within five (5) days of written notice from the City furnish a new or additional bond in full sum and satisfactory to the City. No payment shall be deemed to be due or to be made to the Contractor unless and until such new or additional bond shall be furnished and approved in writing by the City. The premium and all expenses associated with such new or additional bond shall be paid by, and the sole responsibility of, the Contractor.

Section 6. Performance Schedule.
The Contractor shall commence and complete all work and services pursuant to the Contract.

Section 7. Necessary Approvals.
Contractor shall procure all permits, licenses, and certificates and any approvals in performance and completion of this Contract as may be required by federal, state, and local laws, ordinances, rules, and regulations, and in accordance with the Contract.

Section 8. No Waiver.
No waiver, alterations, consent, or modification of any of the provisions of the Contract shall be binding unless in writing and signed by the Mayor or his/her designee.

Section 9. Governing Law.
This Contract is governed and construed in accordance with the laws of the State of Florida. The law of the State of Florida shall be the law applied in the resolution of any claim, actions, or proceedings arising out of this Contract.

Section 10. Venue.
Venue for any claim, actions, or proceedings arising out of this Contract shall be Escambia County, Florida.

Section 11. No Discrimination.
Contractor shall not discriminate on the basis of any class protected by federal, state, or local law in the performance of this Contract.

Section 12. Assignment.
The rights and privileges conferred by this Contract shall not be assigned or transferred without the written consent of the City, which consent shall not be unreasonably withheld.

Section 13. No Other Agreements.
The Parties agree the Contract contains all the terms and conditions agreed upon by the Parties. No other agreements, oral or otherwise, regarding the subject matter of this Contract shall be deemed to exist or to bind either Party.

Section 14. Remedies for Failure to Perform or Breach of Contract.
The City reserves the right to seek all remedies available under law in the event of a failure to perform or other breach of this Contract by the Contractor, and the failure of the City to employ a particular remedy shall not be regarded by the Parties as a waiver of that or any other available remedy.

Section 15. Termination for Convenience.
The City may terminate this Contract without cause upon thirty (30) days prior written notice.

Section 16. Public Records Act.
The parties acknowledge and agree to fulfill all obligations respecting required contract provisions in any contract entered into or amended after July 1, 2016, in full compliance pursuant to Section 119.0701, *Florida Statutes*, and obligations respecting termination of a contract for failure to provide public access to public records. The parties expressly

agree specifically that the contracting parties hereto shall comply with the requirements within Attachment "A" attached hereto and incorporated by reference.

Section 17. Mandatory Use of E-Verify System.
In compliance with the provisions of F.S. 448.095, the parties to this contract and any subcontractors engaged in the performance of this contract hereby certify that they have registered with and shall use the E-Verify system of the United States Department of Homeland Security to verify the work authorization status of all newly hired employees, within the meaning of the statute.

IN WITNESS WHEREOF, the parties hereto have caused this Contract to be executed and sealed the day and year first above written.

PUBLIC RECORDS: Contractor shall comply with Chapter 119, Florida Statutes. Specifically, Contractor shall:

A. Keep and maintain public records required by the City to perform the service.

B. Upon request from the City's custodian of public records, provide the City with a copy of the requested records or allow the records to be inspected or copied within a reasonable time at a cost that does not exceed the cost provided in Chapter 119, Florida Statutes, or as otherwise provided by law.

C. Ensure that public records that are exempt or confidential and exempt from public records disclosure requirements are not disclosed except as authorized by law for the duration of the Contract term and following the completion of the Contract if Contractor does not transfer the records to the City.

D. Upon completion of the Contract, transfer, at no cost, to the City, all public records in possession of Contractor or keep and maintain public records required by the City to perform the service. If Contractor transfers all public records to the City upon completion of the Contract, Contractor shall destroy any duplicate public records that are exempt or confidential and exempt from public records disclosure requirements. If Contractor keeps and maintains public records upon completion of the Contract, Contractor shall meet all applicable requirements for retaining public records. All records stored electronically must be provided to the City, upon request of the City's custodian of public records, in a format that is compatible with the information technology systems of the City.

Failure by Contractor to comply with Chapter 119, Florida Statutes, shall be grounds for immediate unilateral cancellation of this Contract by the City.

IF CONTRACTOR HAS QUESTIONS REGARDING THE APPLICATION OF CHAPTER 119, FLORIDA STATUTES, TO THE CONTRACTOR'S DUTY TO PROVIDE PUBLIC RECORDS RELATING TO THIS CONTRACT, CONTACT THE PUBLIC RECORDS COORDINATOR AT:

April/May, 2025	Contract Award
Summer/Fall, 2025	Notice to Proceed

All times are Central Standard Time

1. The RFP requires the contractor to quantify all ACM, PCB, and regulated wastes, necessitating additional site visits for our team and subcontractors to access each building. Given the facility's size and the inability to rely on the survey information, these visits may span multiple days and require more than one trip to accurately capture all required information. Can you confirm multiple additional visits will be permitted and the process for coordinating these?

A. Additional visits will not be allowed. The expectation is that the Contractor will include in their bid pricing to cover abatement, removal and disposal of all ACM and other hazardous materials based on the available reports and their experience with demolition of similar structures.

Updated Hazardous Materials reports are included as an attachment to this addendum. The updated reports will also be considered indicative and are not to be considered detailed inventories of all materials at the Site.

The Hazardous Materials reports can be accessed at these links:

240761-AL (Hospital Towers) 1717 N E Street Asbestos, Lead, & Hazmat Survey

240761-AL Main Hospital 1017 W Avery St Asbestos, Lead, & Hazmat Survey

2. Should we invite our subcontractors to the site visit / walkthrough on January 23rd? Or will a secondary site visit be made available?

A. The number of representatives per Bidder is limited to three (3). It is up to the bidder to decide whether any of the 3 are subcontractors.

There is no planned second visit.

NOTE: Additional information - the Contractor is expected to include in their planning routine and contingency measures to secure waste and other site materials in all cases of high winds or storms.

MEMORANDUM

TO: Respondents to RFQP #25-008, Decommissioning and Demolition (D&D) Contractor for the Former Baptist Hospital Complex

FROM: Dedria Lunderman, Purchasing Manager

DATE: April 4, 2025

SUBJ: Notice of Intent to Award

Thank you for your proposals in response to the City's solicitation. After considering the information received, the committee ranked the firms as shown below.

1) LM Sessler Wrecking & Excavating, Inc.
2) NorthStar Contracting Group, Inc.
3) Independence Excavating, Inc.
4) Renascent, Inc.

The committee's recommendation of award to the highest-ranked firm will be forwarded to the Mayor. The Mayor's recommendation for award of contract will be presented at a future City Council meeting. This memorandum serves as the City's Notice of Intent to Award.

Within three (3) business days of the issuance of this notice, any firm that responded to the RFP and believes that the City has incorrectly selected another respondent for award may submit a written notice of protest. Such notice of protest must be received by the City on or before 10:00 A.M. on April 9, 2025. Protests must be delivered to:

Dedria Lunderman
Purchasing Manager
City Hall, 6th floor
222 West Main Street
Pensacola, FL 32502
purchasing@cityofpensacola.com

The notice of protest must include a written statement specifying in detail each and every one of the grounds asserted for the protest. The protest must be signed by an individual

authorized to represent the bidder, and must cite the law, rule, local ordinance, procedure or RFP provision on which the protest is based. In addition, the protestor must specify facts and evidence sufficient for the City to determine the validity of the protest.

Thank you for your firm’s submittal and interest in this project.

cc: Erica Grancagnolo - Economic Development Director, City of Pensacola

MEMORANDUM

TO: Respondents to RFQP #25-008, Decommissioning and Demolition (D&D) Contractor for the Former Baptist Hospital Complex

FROM: Dedria Lunderman, Purchasing Manager

DATE: April 29, 2025

SUBJ: Notice of Intent to Award (REVISED)

Thank you for your proposals in response to the City's solicitation. After considering the information received, the committee ranked the firms as shown below.

1) NorthStar Contracting Group, Inc.
2) Independence Excavating, Inc.

The committee's recommendation of award to the highest-ranked firm will be forwarded to the Mayor. The Mayor's recommendation for award of contract will be presented at a future City Council meeting. This memorandum serves as the City's Notice of Intent to Award.

Within five (5) business days of the issuance of this notice, any firm that responded to the RFP and believes that the City has incorrectly selected another respondent for award may submit a written notice of protest. Such notice of protest must be received by the City on or before 10:00 A.M. on May 6, 2025. Protests must be delivered to:

Dedria Lunderman
Purchasing Manager
City Hall, 6th floor
222 West Main Street
Pensacola, FL 32502
purchasing@cityofpensacola.com

The notice of protest must include a written statement specifying in detail each and every one of the grounds asserted for the protest. The protest must be signed by an individual authorized to represent the bidder, and must cite the law, rule, local ordinance, procedure

or RFP provision on which the protest is based. In addition, the protestor must specify facts and evidence sufficient for the City to determine the validity of the protest.

Thank you for your firm’s submittal and interest in this project.

cc: Erica Grancagnolo - Economic Development Director, City of Pensacola

AGREEMENT BETWEEN CITY OF PENSACOLA, FLORIDA AND CONTRACTOR

This Agreement (the "Agreement") is entered into as of the ___ day of November 2025 between The City of Pensacola, Florida (the "City") and NorthStar Contracting Group, Inc. (the "Contractor")(collectively, the "Parties").

WITNESSETH:

WHEREAS, the City solicited for Request for Proposals #25-008 on February 17, 2025, for decommissioning and demolition of the former Baptist Hospital Complex located at 1000 West Moreno Street, Pensacola, Florida (the "Project"). The RFP with all attachments and as modified by all addenda is hereby incorporated by reference (and referred to hereinafter as the "City's RFP"); and

WHEREAS, in response to the City's RFP, the Contractor submitted to the City a proposal dated February 26, 2025 (the "Contractor's Proposal"). The Contractor's proposal is hereby incorporated by reference; and

WHEREAS, the Contactor is the apparent successful bidder for the Project, and the City intends to award the Contract to the Contractor by execution of this Agreement and as otherwise required by the City's rules, regulations and guidelines; and

WHEREAS the Contractor desires to provide all labor, equipment, materials and services specified pursuant to the terms and conditions set forth in this Agreement for the Project (the "Work"); and

THEREFORE, in consideration of the Work to be performed and the payment for the performance of the Work, of the mutual covenants and benefits contained herein, and for other good and valuable consideration, the Parties agree as follows:

Article One: Recitals.

The recitals contained above are true and correct and are incorporated into this Agreement.

Article Two: Key Terms.

2.1 Contract Price. The total price to be paid to Contractor for all work contemplated by this Agreement is $12,776,800.00 subject to additional adjustments only as provided by this Agreement (the"Contract Price"). The Parties hereby agree that the Contract Price will be full and total compensation to the Contractor for all labor, equipment and materials required for the Contractor's Work including but not limited to: Contractor's profit and home office overhead; general conditions costs; applicable taxes; employee and union benefits; insurance; and surety bonds, if surety bonds are required. The Contract Price also includes payment to the Contractor for all goods, labor, supervision, articles,materials, apparatus, equipment, delivery and operations of the Contractor specified, listed,mentioned, scheduled or implied by this Agreement, and in any of the documents attached to or referenced by this Agreement (collectively, the "Contract Documents ").

2.2 Scope of Work. The Contractor's scope of Work is described in the City's RFP and detailed by the Contract Documents identified in Article 3. The Work includes but is not limited to incurring all efforts and costs required to complete the following:

2.2.1 attend pre-construction and other routine project meetings and providing regular progress reports and schedule updates;

2.2.2 preparing all required submittals;

2.2.3 obtaining all necessary permits, licenses and training to complete the Project;

2.2.4 identifying, removing, and lawful disposition of ALL universal waste and hazardous substances (including but not limited to ACM, PCB waste, LBP (as defined in the City's RFP), and other materials as may be encountered);

2.2.5 utility locate, abandon (disconnect), and backfill;

2.2.6 draining of existing utility lines (*i.e.*, cooling lines, water supply lines, wastewater lines, pressurized gases, etc.) and de-energizing all electrical systems;

2.2.7 removing all existing materials, debris and scrub vegetation adjacent to the designated buildings down to the existing land surface and restoring any final grades to existing drainage pathways;

2.2.8 sweeping all dust and debris to create a clean and usable surface;

2.2.9 constructing and maintaining a locked 6-ft chain-link fence around the perimeter of the Site which will include a man-door/gate and vehicle access; and

2.3.10 all other activities as may be required to comply with the requirements described in the City's RFP.

2.3.11 Work Removed from Scope. Work related to the "North Parking Area" identified in the City's RFP (see Exhibit G Proposal Form at pg. 4 of 14 (removal of existing paving and facilities and removal of existing underground utilities and substructures) have been removed from contractor's scope of work and Contract Price.

2.3 Project Schedule. The agreed upon schedule for the Work is 553 calendar days from the date of commencement of the Work as further detailed in **Exhibit A**. It is specifically agreed that **TIME IS OF THE ESSENCE** in meeting all due dates in the schedule. Performance by Contractor shall not be complete until the Work has been fully performed, inspected and accepted in writing by City or the City's designated representatives. Contractor shall not commence Work or incur reimbursable costs until the City provides the Contractor with a written Notice to Proceed.

2.4 Contractor's Demolition Plan. Prior to commencing the Work, the Contractor shall prepare and submit to the City for its review and acceptance a plan for the Project's decommissioning and demolition (the "Contractor's Demolition Plan" or "Plan"). The plan shall not include any crushing of concrete on site. The Contractor's Demolition Plan shall set forth the contractor's means, methods, processes, sequences, procedures and all other pertinent information concerning the Contractor's planned execution of the Work. All costs to prepare the Contractor's Demolition Plan are included in the Contract Price. The Contractor's Demolition Plan shall fulfill all requirements set forth in the City's RFP for the Work and all representations made by the Contractor in its Proposal concerning the Work. Review and acceptance of the Contractor's Demolition Plan by the City, the Engineer and/or any design or construction consultant providing services for the City shall not, in any way or for any purpose relieve the Contractor's sole responsibility and liability for the Plan and the Work. Review and acceptance of the Contractor's Demolition Plan by the City, the Engineer or anyone on behalf of the City shall not relieve the Contractor from responsibility and liability for any deficiency that may exist, or from any departures or deviations from the requirements of the Contract Documents. Further, the City's review and acceptance of the Contractor's Demolition Plan is not an approval or endorsement of the Plan. Said review is strictly limited to whether the Plan generally complies with the intent of the City's RFP. The Contractor shall full indemnity and hold harmless all Indemnitees identified in

10.4 to the same extent and manner provided by 10.4 against all claims, judgments, costs, injuries, damages, liabilities, losses, expenses, liens and penalties to the extent they arise from or are related to the Contractor's Demolition Plan.

2.5 Payment Schedule and Requirements. If the Contractor is not in default under this Agreement or under any other Contract Document and is following all the documentation requirements in this Agreement, the Contractor shall receive payment on a percentage complete basis utilizing a schedule of values that shall be submitted by the Contractor and approved by the City in advance of commencement of the Work (the "Schedule of Values"). Once submitted by the Contractor and approved by the City, the Schedule of Values shall become **Exhibit B** to this Agreement. Payment applications shall be submitted by no later than the 18th calendar day of the month for the prior month. At the City's discretion, drafts (*i.e.*, "pencil copies") of payment applications may be submitted earlier for discussion. The City will issue payment by the 10th day of the month (or the next business day if the 10th is not a business day) for all amounts approved by the City. All requests for payment from the Contractor shall be accompanied by claim and lien releases in a form acceptable to the City executed by the Contractor and all subcontractors, suppliers, vendors, engineers, architects and or materialmen under contract with the Contractor ("Subcontractors") that are to be paid from the funds in the application for payment at issue. Contractor shall utilize and fully complete the AIA G702 (Application and Certification for Payment) form and the AIA G703 (Continuation Sheet) form when making payment applications.

2.6 Liquidated Damages. The Contractor acknowledges that completion of the Work within the schedule and time(s) set forth in Exhibit A (as may be adjusted by other provisions within this Agreement) is necessary to safeguard the City from financial damages caused by delays to completion of the Work. The Parties also acknowledge that, as of the time this Agreement is entered into, it is not possible to accurately forecast the actual amount of damages that will be incurred by the City due to a delayed completion of the Project, or the associated costs, delays or difficulties in proving actual damages suffered by the City if the Work is not completed on time. Nonetheless, the City and Contractor agree that a reasonable estimate of delay damages is Two Thousand Dollars ($2,000.00) per calendar day. Accordingly, if the Project is not "substantially complete" by the date set in Exhibit A (as may be adjusted pursuant to other provisions in this Agreement) the Contractor agrees to pay the City Two Thousand Dollars ($2,000.00) per calendar day as liquidated damages. The Parties also agree that the liquidated damages established by this provision are not a penalty. "Substantially complete," as that term is utilized in this provision, means that the Contractor's Work is complete up to the point that the Project can be utilized by City as intended and only "punch list" Work remains to be performed. Here, for D&D, generally "punch list" work is contemplated to be minor amounts of debris remaining on site, incomplete seeding or other minor items of Work that remain to be performed. In the event there is any disagreement as to whether the Work is "substantially complete," the Engineer shall determine the date of substantial completion. Unless it is subsequently determined by a judge, jury or arbitrator that the Contractor failed to utilize reasonably diligent efforts to complete the Work by the date set forth in Exhibit A, the maximum amount of liquidated damages for which the Contractor shall be liable for late completion of the Project is One Million Dollars ($1,000,000).

2.7 Grace Period for Liquidated Damages. Notwithstanding the preceding Liquidated Damages provision, if Contractor is not in default of any other obligation under this Agreement, Liquidated Damages will be waived for a period of up to 30 calendar days past the date for Substantial Completion (the "Grace Period") if Substantial Completion is reached within the Grace Period. If, however, Substantial Completion is not reached during the Grace Period, the computation for Liquidated Damages will begin on the date of Substantial Completion as set forth in Exhibit A.

2.8 Contract Retainage. Unless prohibited by applicable law, Contractor agrees that the City will retain Ten Percent (10%) of all sums as due to Contractor pursuant to this Agreement as contract retainage. Upon approval by surety (if surety bonds are required), and if the Work complies with all Contract Documents, one/half of all previously retained funds shall be released to

Contractor at Substantial Completion of the Work, or, at the City's sole option and discretion, retainage shall be reduced to two times the cost (as reasonably determined by the EOR) of the remaining "punch list" or other Work that is not completed. The balance of retained funds shall be released upon Final Completion unless the City is otherwise entitled by other provisions of this Agreement to withhold payment.

2.9 Project Management and Notices. All Notices required to be served by this Agreement shall be in writing and be personally delivered or forwarded by overnight express mail delivery. E-mails are also permitted but only if there is a return acknowledgment to the e-mail the sender intends to serve as Notice. Phone texts are NOT sufficient for Notices required by this Agreement. Notice shall be effective on the date of actual delivery or, if the Notice cannot be delivered, on the first date actual delivery is physically attempted. **All such Notices shall be delivered to the individuals identified below who are the designated project management representatives for their respective Parties/entities:**

Engineer of Record (the "EOR" or "Engineer"):
Jacobs
Joshua Wallace
25 W. Cedar Street, Suite 350
Pensacola, FL 32502
Phone Number: 850-341-2980
Email: Joshua.wallace@jacobs.com

City's Representative:
City of Pensacola Florida
Erica Grancagnolo
222 West Main Street
Pensacola, Florida 32502
Phone: 850-435-1687
Email: erica@cityofpensacola.com

Contractor's Representative:
NorthStar Contracting Group Inc.
John Jenkins
9135 Avenue C
Orlando, FL 32824
Phone: 407-855-2365
jjenkins@northstar.com

Other than tasks/responsibilities specifically designated to the Engineer by this Agreement, the City's Representative shall be Contractor's primary contact for its Work, and the Contractor shall receive direction from the City through the designated City's Representative and no one else unless the Contractor has been provided different instructions in a writing signed by a duly authorized representative of the City.

Article Three: Contract Documents.

3.1 Contract Documents: For the purposes of this Agreement, the "Contract Documents" shall consist of:

(a) This Agreement;
(b) The City's RFP;
(c) Contractor's Proposal;
(d) Project Schedule, attached as **Exhibit A**;
(e) Schedule of Values [*to be attached*] as **Exhibit B**;
(f) Insurance Requirements, attached as **Exhibit C**;
(g) The Contractor's Demolition Plan [*to be attached*] as **Exhibit D**; and
(h) Any additional documents agreed to in writing between the Parties subsequent to the date of this Agreement.

In the event of any disagreement or conflict between the terms, conditions or requirements within the Contract Documents, the conflict shall be resolved utilizing the following order of precedence: (1) This Agreement; (2) the City's RFP; (3) the Contractor's Demolition Plan (4) Insurance and Bond Requirements (5) the Contractor's Proposal.

3.2 Contractor's Review and Acceptance of Contract Documents. Contractor hereby states that it has reviewed and understands all the Contract Documents, has been provided sufficient opportunity to ask questions or to seek reasonable clarification from the City and or from the Project's design professionals concerning all perceived ambiguities, and has also had sufficient opportunity to obtain advice from Contractor's own legal counsel concerning the terms of this Agreement. Having fully performed its due diligence, Contractor hereby agrees to be bound by this Agreement and all other Contract Documents for all purposes in performing the Work.

3.3 Drawings. If applicable, **t**he City shall provide Contractor with one set of drawings and specifications for the Work. Upon written request, additional copies of drawings and specifications will be provided at Contractor's expense.

Article Four: Contractor's Warranties & Responsibilities.

4.1 Contractor's Warranty and Assumption of Risk. The Contractor warrants that the Contract Price is fair and reasonable compensation and is sufficient for Contractor's completion of the Work and to fully compensate the Contractor for its knowing assumption of all risks of all conditions, hazards and difficulties in connection with performance of the Work unless otherwise expressly provided herein. Notwithstanding the order of precedence set forth in 3.1 above, in the event of any inconsistency between or among the terms and conditions of the Contract Documents, the more restrictive provision or the greater quantity or quality, as applied to the Contractor, shall govern.

4.2 Duly Licensed and Credentialed. Contractor hereby affirms that it is fully licensed, credentialed, certified and in good standing in the jurisdiction of the Project to lawfully perform all Work and provide all materials required by this Agreement, and will immediately inform the City in writing in the event the Contractor's status is revoked or changed prior to Final Completion of its Work on the Project.

4.3 Site Inspections. Contractor hereby affirms that it has inspected, has become familiar with and has fully satisfied itself with respect to the Work to be performed pursuant to this Agreement including the actual site conditions, existing utilities, and quantities of ACM, LPB and/or hazardous waste (of any and every kind) within the buildings on the Project Site that must be removed and/or abated during Contractor's performance of the Work, and the Contractor has included all costs it will incur in performing such Work in its Contract Price.

4.4 No Discrimination. The Contractor shall not discriminate against any employee or applicant for employment because of race, creed, color, religion, sex, sexual orientation, national origin, age, disability, marital status, citizenship status or any other basis prohibited by applicable federal, state or local law, and shall undertake affirmative, good faith efforts to cause all its subcontractors to do the same. The prohibition against discrimination shall apply but not be limited to recruitment, employment, job assignment, promotion, demotion, transfer, layoff, termination, rates of pay and other forms of compensation and inclusion in training programs including apprenticeship and on the job training.

4.5 Compliance with all Applicable Laws. At its own expense, Contractor shall comply with all applicable laws, ordinances, rules and regulations in performing its Work, including any legal orders issued by any public authority related to the Work or Project, and shall require its subcontractors to do the same.

4.6 Shop Drawings and Submittals. Contractor shall timely submit all required shop drawings and samples to support the Project Schedule and or in accordance with any schedule provided for submission of shop drawings and samples, with such promptness as to cause no delay in the Work. Review by City, the Engineer and/or any design or construction consultant providing services for the Project shall not relieve the Contractor from its responsibility to prepare and submit proper shop drawings in accordance with this Agreement. Any submission which, in the Engineer's reasonable opinion, is incomplete or contains numerous errors will be returned for re-submission. The Contractor shall be liable for and shall pay any additional charges imposed by the Project's engineer, architect or City's other design consultants for subsequent review of submittals caused by the Contractor's failure to submit accurate and complete submittals or otherwise comply with requirements for submittals.

4.7 Contractor's Responsibility for Estimating Quantities and Verifying Dimensions, Surveys, Utility Locations, Hazardous Materials and Other Property Conditions. The City has provided information to the Contractor concerning the Project and the Work. All information provided is correct to the best of the City's knowledge. As stated in the RFP, however, the information and reports provided by the City are not complete and the Contractor hereby acknowledges that the City has never represented that the information provided was complete. The Contractor acknowledges that the information provided should be considered only indicative of the hazardous materials and utilities that may be present at the Project and must be remediated by the Contractor. As such, the **Contractor CANNOT RELY upon any information provided by the City, and MUST INVESTIGATE AND VERIFY for itself all quantities, site conditions, utility locations and all other information concerning the Project site and the Work.** By submitting its Proposal, the Contractor represents that it has performed its own due diligence and has satisfied itself that its proposed Contract Price is sufficient to fully pay Contractor for performing all the Work. Moreover, the Contractor is solely responsible to verify dimensions and field conditions for its own submittals. Review by the City, the Engineer or anyone on behalf of the City of the Contractor's Proposal, The Contractor's Demolition Plan or any other submittal shall not relieve the Contractor from responsibility for any deficiency that may exist, or from any departures or deviations from the requirements of the Contract Documents. Likewise, the Contractor shall be solely responsible for all costs it incurs to remove or remediate all ACM, LPB and/or hazardous waste (of any and every kind) within the buildings on the Project Site during Contractor's performance of the Work. Abatement, removal and disposal of ACM or other hazardous materials encountered during performance of the Work that was not identified in information provided by the City shall not result in a change order to the Contractor. Moreover, any damage caused to existing underground or above-ground utilities (that are to remain in place), regardless of whether the utilities were indicated on the plans, shall be paid for by Contractor.

4.8 No Work Permitted Until Submissions Approved. No portion of the Work requiring a shop drawing or sample submission from Contractor shall be commenced until the submission has been approved or accepted in writing.

4.9 Protection of Personnel, Property and Environment. In full compliance with all Contract Documents, **t**he Contractor shall diligently undertake all reasonable efforts to continuously protect the Work, the property, all persons on the Project site and the property of others from damage, injury or loss related to and or arising in connection with its Work. The Contractor shall be responsible for and shall pay for all damages, injuries or losses caused by the Contractor, its employees or agents and or its subcontractors. Notwithstanding the minimum obligations imposed by law, it is Contractor's mission to ensure that the highest standards of safety are maintained, and that the environment is protected. Accordingly, among and in addition to other requirements that may be contained in other Contract Documents, the Contractor is required to:

4.9.1 Designate a qualified and competent on-site Safety Representative empowered to act on behalf of Contractor in all matters pertaining to safety. Once identified, the designated Safety Representative shall not be changed without the City's express written permission, which shall be reasonably and promptly granted provided that the replacement is demonstrated to be properly qualified and or credentialed.

4.9.2 Be knowledgeable of and conduct all work in full compliance with all state and federal regulations including Occupational Safety and Health Administration ("OSHA") rules and guidelines as well as all other applicable safety rules and regulations. The Contractor shall be held fully responsible for all fines and related costs, including attorney's fees and legal costs, related to the Contractor's failure to abide by OSHA and all other applicable safety rules and guidelines.

4.9.3 At its own cost and expense, undertake best practices to protect its own employees and other persons on the site from risk of death, injury or bodily harm arising out of or in any way connected with Contractor's Work.

4.9.4 Immediately report all accidents concerning Project property, work or personnel to the City. The Contractor shall provide a copy of a completed accident investigation report to the City within 48 hours of all accidents.

4.9.5 Require all Contractor's personnel and the personnel of all subcontractors to wear all prescribed Personal Protective Equipment ("PPE") in compliance with OSHA requirements and guidelines, as well as in compliance with the Contractor's policies and procedures.

4.9.6 Have approved prevention and emergency cleanup plans and procedures in place prior to handling, removing or delivering environmentally hazardous materials to the Project site.

4.9.7 Immediately notify the City in writing concerning any potentially hazardous spill or release.

4.9.8 Undertake all required actions and precautions to safeguard against environmental contamination. The Contractor will be responsible for cleanup and all costs related to or arising from environmental spills caused by Contractor's equipment and or personnel and for environmental spills caused by its subcontractor's equipment and or personnel.

4.9.9 Maintain appropriate and adequate control over all employees and the employees of subcontractors on the Project site. Contractor shall immediately remove or cause to be removed from the Project site any person or entity for whom Contractor is responsible who,

in the sole judgment of the City or the EOR, is determined to be detrimental to the work and or the Project site.

4.9.10 Ensure that no illegal drugs or alcohol are consumed by its employees or the employees of subcontractors before or during their work at the Project site. In addition, the Contractor shall not permit the consumption of prescription or over-the-counter medications that result in or appear to cause a worker's impaired performance on the work site. Any person identified on the Project site that, in the City's sole opinion, appears to be impaired in any way, shall be immediately removed from the Project site by the Contractor who shall also ensure that the removed person is safely transported from the Project to a safe and secure location.

4.10 Risk of Loss. Notwithstanding the timing of any payments made by the City and or any agreement to pay freight or other transportation charges, the risk of loss or damage for all goods supplied under this Agreement shall remain solely with Contractor until acceptance of the Work by the City.

4.11 Required Standards. All materials and equipment to be permanently installed on the Project shall be new and of such quality to satisfy all requirements set forth in the Contract Documents. Upon request, Contractor shall furnish evidence to the City's reasonable satisfaction with respect to the origin, type and quality of all materials and equipment. All labor shall be performed by persons sufficiently skilled in their respective trades. Workmanship shall be of good quality, and the standards of construction or demolition shall satisfy all requirements set forth in the Contract Documents. All Work shall be undertaken with the requisite standard of care applicable to similar trades performing the same type of work in the same geographic area.

4.12 Payment for Stored Materials. At the City's sole discretion, Contractor may be permitted to include in its payment applications a request for payment for stored materials not yet delivered to the Project. If the City agrees, however, the Contractor must provide the following documentation to the satisfaction of the City:

a. a bill of sale and other documentation satisfactory to the City that title (ownership) of the stored materials will pass to the Contractor and or the City upon receipt of the payment from the City;

b. a written list identifying each location where such materials are stored, the inventory and the value of materials stored at each location; and

c. evidence that Contractor has procured insurance satisfactory to the City for materials stored off the Project site in an amount not less than the full replacement value thereof.

In all such instances, however, retainage in the amount of twenty percent (20%) of the invoiced amount for all stored materials shall be withheld for payment. In addition, the Contractor shall remain fully responsible and wholly at risk for any loss or damage to such stored materials (at full replacement value) until such time as the materials are delivered to the Project, installed and accepted by the City.

4.13 Consent for Withholding Payments. Contractor hereby agrees that the City is entitled to withhold any and all payments otherwise due to Contractor in an amount, in the City's reasonable opinion, necessary to: replace or repair defective Work; discharge and to pay any and all liens arising out of the Work; compensate itself for unexcused delays caused by the Contractor; pay claims by third parties arising out of the Work; and for any and all other damages, losses or injuries caused or threatened to the City arising out of or related to the Work performed under this Agreement by the Contractor and its subcontractors. If any such obligations, claims or liens exceed

the amount of Contract Price then unpaid, or arise after the full Contract Price has been paid or otherwise satisfied in accordance with and subject to the terms and conditions of this Agreement, Contractor shall immediately pay to the City all monies that the City may have paid or become obligated to pay to discharge such obligations, liens or claims with respect to the Project including reasonable legal fees and costs. When, however, the reason(s) for withholding payment are extinguished, the City shall promptly release previously withheld funds to the Contractor, less costs and expenses, including reasonable attorney's fees and costs, if any, incurred by the City due to the reason(s) for the withholding.

4.14 Payments Designated as Trust Funds. Contractor shall use all sums paid to it solely for the purpose of performing the Work in accordance with the Contract Documents. Any and all funds paid to Contractor are hereby declared to constitute trust funds to be applied (before application for any other purpose) to the payment of: (a) claims of materialmen or other entities performing work and employed by Contractor; and (b) all indemnity obligations of Contractor hereunder. The Contractor shall pay all subcontractors whose charges were included in a request for payment within seven (7) business days of Contractor's receipt of payment from the City for all contractually compliant Work performed by subcontractors, unless there is a valid reason to withhold payment of which the City is provided written notice in advance of the withholding.

4.15 Requirements for Acceptance of Work. No certificate issued, payment, partial or entire use or occupancy of the Project shall constitute or be construed as acceptance of any Work or materials not in accordance with the Contract Documents. No act or omission by the City, the Project Architect, Project Engineer or any representative of any of them, shall constitute or be construed as a waiver of any requirement of this Agreement for the Work to be performed by the Contractor.

4.16 Personnel and Supervision Requirements. The Contractor shall employ and furnish to the Project sufficient and properly qualified personnel to perform the Work in full compliance with the Contract Documents within the time required by the Project Schedule. The Contractor shall have at a minimum, one properly credentialed and qualified supervisor on site at all times Work is being performed. Except to address temporary emergencies, no changes to supervisory personnel at the Project during performance of the Work shall be made without first obtaining written consent from the City, which shall be reasonably and promptly granted provided that replacement personnel are demonstrated to be properly qualified and or credentialed.

4.17 Reservation of Right to Approve Subcontractors. At City's sole option, if written notice is provided to Contractor before commencement of the Work or at any time during performance of the Work, Contractor shall, in advance of utilizing subcontractors and suppliers, obtain the City's reasonable consent for utilization of subcontractors for performing Work and providing materials valued at or anticipated to be provided in excess of $50,000. Upon request, the Contractor shall provide the City with written information concerning the proposed subcontractor's credentials, experience and business reputation.

4.18 Responsibility for Payment of Taxes and Contributions. Contractor hereby agrees and accepts full responsibility and liability for the payment of all contributions (including all union benefits) and taxes imposed by the laws of the United States or by the laws of any other country, state or city arising from or related to its Work and the Work performed by its subcontractors. The Contract Price includes, and Contractor shall be liable for the payment of all sales, use and other taxes of whatever nature levied or assessed against the City related to Contractor's Work. The Contractor shall indemnify and hold the City harmless for any and all claims, causes of action, assessments and or levies imposed for contributions and taxes arising out of Contractor's Work under this Agreement.

Article Five: Changes to the Work.

5.1 Right to Make Changes. The City may, at any time, make changes to the drawings, designs, specifications, or provide for additions to, or reductions from the Contractor's Work. The Contractor hereby agrees to promptly proceed with all such changes as directed.

5.2 Change Order Requirements. A Change Order to this Agreement must be in writing, executed by duly authorized representatives of the City and Contractor and utilizing a form acceptable to the City. Any change in the Work made by the Contractor prior to the receipt of a Change Order executed by the City shall be solely at the financial risk of the Contractor.

5.3 Valuation of Change Orders. Subject to paragraph 2.8 (Contract Retainage) above, if changes to the Work equitably require the issuance of a Change Order to increase or decrease the Contract Price, the change in Contract Price shall be calculated based upon: (a) the Contractor's properly documented cost of the changed Work (less the cost of the original Work if the changed work replaced original Work); and (b) plus (for change orders that increase the Contract Price) or minus (for Change Orders that lower the Contract Price) fifteen percent (15%) of Contractor's documented costs representing Contractor's profit and all overhead costs, including general conditions, insurance and surety bonds (if bonds are required). Change Orders (singularly or collectively processed) that do not modify the Contract Price shall not include profit or overhead adjustments.

Article Six: Final Payment.

6.1 Final Application for Payment. Final Payment of the unpaid contract balance due Contractor, including contract retainage, as adjusted by additions or deductions to the Contract Price, shall be made on a Final Application for Payment in a form approved by the City. Written approval and acceptance of all the Work under this Agreement shall be a condition precedent to issuance of Final Payment.

6.2 Final Lien and Claim Waivers. The Application for Final Payment shall be accompanied by executed final lien and claims waivers by the Contractor and all its subcontractors in a form acceptable to the City.

6.3 Conditions for Final Completion and Payment. In order to reach Final Completion and be entitled to receive Final Payment, the Contractor shall:

(a) have made, or caused to be made, all corrections in its Work to remedy all defects, meet all requirements set forth in the Contract Documents and comply with all applicable building and safety code requirements;

(b) have delivered to City all written guarantees, warranties, and operation and maintenance instructions for equipment and apparatus required by the Contract Documents for the Work or any portion thereof. If applicable, the Contractor shall furnish the City with printed instructions and specifications for proper installation or operation of the Work or goods purchased. If applicable, the City may request in writing the Contractor's technical assistance in connection with the installation and maintenance of the Work or goods purchased. The Contractor agrees to respond to the City's reasonable requests, and to render such assistance as may be reasonably necessary at no additional cost;

(c) if applicable or included in Contractor's scope of Work, have delivered to City "as built" documents identifying all items that were constructed differently than the permitted construction drawings and specifications for the Project and/or were

added to or deleted from the permitted construction drawings and specifications for the Project; and

(d) if applicable or included in Contractor's scope of Work, provide all training to persons designated by the City with respect to the operation and maintenance of the Work.

6.4 Agreement for Releases Upon Final Payment. Unless otherwise agreed in a writing duly executed by the City, Contractor's acceptance of Final Payment shall constitute a full and unconditional waiver and release of all existing and or potential claims and causes of action by Contractor (known and unknown) against: the City, its principals, officers, employees and representatives; the Project's Engineer and/or Architect, its principals, officers, employees; all design subconsultants under contract with the City and or the Project Architect and/or Engineer, their principals, officers, employees (collectively, the "Releasees") from all liability for all things done or furnished in connection with the Work, and for every act or omission by Releasees relating to or arising out of the Work and the Project. This Release also includes Contractor's obligation to fully indemnify and hold harmless the Releasees from any and all claims and causes of action by Contractor's subcontractors against Releasees including reasonable attorneys' fees and costs incurred due to any claims or causes of action asserted by Contractor's subcontractors. The Contractor, prior to and as a condition to receipt of Final Payment, shall also execute and deliver to Contractor a written General Release and Indemnification Agreement meeting the requirements set forth herein in a form approved by the City.

Article Seven: Liens.

7.1 Requirement to Remove Liens. To the fullest extent permitted by applicable law, the Contractor shall not allow any lien or other encumbrance by others to remain on record for more than ten (10) calendar days as a claim against the Project, the Project property or unpaid contract funds related to or arising from the Contractor's Work or materials furnished under this Agreement or the Work and materials provided by its subcontractors. If any such lien or encumbrance has been filed, the Contractor shall cause such lien or encumbrance to be removed by resolution of the claim or by posting a lien discharge bond or other security for payment acceptable to the City. No additional payment shall be made under this Agreement to the Contractor until Contractor has fully complied with this provision.

7.2 Costs for Removal of Liens. If the Contractor fails to timely discharge liens as provided in the preceding paragraph, the City shall have the right but not the responsibility to remove all such liens or encumbrances by payment to claimant or bonding of lien, or in any other manner satisfactory to the City. The Contractor shall be fully responsible for all costs incurred by the City in discharging such liens or encumbrances including reimbursement of the City's reasonable costs and attorney's fees.

Article Eight: Schedule, Progress and Delays.

8.1 Compliance with Schedule. Contractor shall complete all Work in accordance with the Project Schedule attached hereto as **Exhibit A**.

8.2 Attendance at Meetings. At their own expense, authorized representatives for the Contractor and its subcontractors, upon a minimum of 48-hour notice, shall attend all meetings or conferences as directed by the City or for the purpose of discussing progress of the Work or any other Project-related issue.

8.3 TIME IS OF THE ESSENCE IN PERFORMING THIS AGREEMENT. Contractor hereby acknowledges that the City will sustain significant financial losses if completion of the overall Project is delayed due to Contractor's failure to perform any part of its Work in accordance with the Contract Documents or complete such Work within the times set forth in the Project Schedule. Contractor shall begin its Work at the time directed by the City and shall diligently perform all its obligations under this Agreement with sufficient manpower to maintain the progress of the Work as scheduled without delaying other trades or areas of work. If Contractor is delayed for any reason other than those set forth in 8.4 below, the Contractor shall, at its own expense, accelerate its Work to remedy and or mitigate all delays through including but not limited to: performing work out of sequence; adding additional labor and or utilizing overtime labor, and adding equipment without any increase in the Contract Price.

8.4 Potentially Excusable Delays. Should Contractor's Work be substantially and materially delayed by: (a) any wrongful act or default by the City, the Engineer or other design professional under contract with the City or any other subcontractor or other supplier employed at the Project (other than Contractor's own subcontractors); (b) material changes to the Work or the work of others; (c) ordered changes to the Project Schedule by the City; (d) unusual, adverse weather conditions such as a hurricane; (e) *Force Majeure* events such as labor strikes, war or national emergencies; (f) governmental action including, subsequent to the execution of this Agreement, unforeseen changes in rules, orders or regulations of any department or subdivision of any governmental agency; or (g), any other demonstrated cause for actual delay beyond the reasonable control and or foreseeability of Contractor and, so long as such delay was not a result of the Contractor's acts, omissions or failure to act (collectively "Potentially Excusable Delays"), the time for substantial completion and or final completion of the Work may be extended for a period equal to the time lost on a critical path basis by reason of such delays as may be acknowledged in good faith by the City *but only if* the City approves the corresponding or related period of delay for the Contractor's work. **To potentially qualify for an extension of time to complete any portion of the Work, the Contractor must provide the City with a written notice and claim requesting an extension of time within fourteen (14) calendar days after Contractor first became aware (or reasonably should have become aware) of the reason for the potential delay.** The Notice must specify the alleged cause of the delay, the duration of the delay and, based upon a critical path analysis, the number of days of extension requested by the Contractor.

8.5 Contractor's Assumption of Risk for Contemplated Delays. Contractor hereby acknowledges that, despite diligent efforts, some delays and interruptions are common and are anticipated for construction projects such as the Project here including but not limited to delays caused by: (a) incomplete or erroneous drawings and specifications; (b) changes to drawings and specifications; (c) additional time required by design professionals and others to review or approve design changes and submissions; (d) delays related to material and or equipment deliveries; (e) scheduling delays related to governmental and other third party inspections; and (f) typical Florida weather conditions (collectively, "Contemplated Delays"). **Accordingly, notwithstanding any other provision of this Agreement, Contractor hereby agrees to waive all potential claims and damages including schedule delays arising from or related to such Contemplated Delays and hereby assumes the entire risk of all loss and expense for delays to the performance of its Work caused by such Contemplated Delays.** Contractor hereby certifies that it has considered, as an experienced and knowledgeable Contractor, the financial risks and probability of encountering such delays, and that its Contract Price for the Work includes sufficient value to compensate itself for acceptance of such risks.

8.6 Concurrent Delays; Benefit of Schedule "Float." The Contractor shall not be entitled to any extension of time, under any circumstance, where the Contractor itself was responsible for a concurrent delay that, irrespective of any other alleged delays by others, would have independently delayed the Work. The Contractor hereby acknowledges, when evaluating any Contractor delay

claim, the City shall receive the benefit of all schedule "float" in any Work duration or Project schedule.

8.7 No Monetary Damages for Delays. Time Only. To the fullest extent provided by Florida law, the City shall not be liable to the Contractor for, and the Contractor hereby waives, all claims against the City on account of any damages, costs or expenses of any kind or nature that the Contractor may incur as a result of any delay that may occur regardless of the cause. It is understood and agreed that the Contractor's sole and exclusive remedy in the event of a delay for which the Contractor is entitled to an extension of time shall be an equitable extension of the dates for Substantial and Final Completion based upon the demonstrated impact of the delay. In the event that the Contractor is delayed in the prosecution of its Work by an act, omission, neglect or fault of the City, the Contractor agrees to make no claim for monetary damages for delay and that any such claim shall be fully compensated for by an extension of time to complete the Work.

Article Nine: Warranties and Guarantees.

9.1 Guarantees and Warranties. The Contractor hereby warrants that all Work performed and materials and equipment furnished under this Agreement shall be free of defects for a period of two (2) years from the date of Final Completion, or for a longer period of time if so specified by the Contract Documents or by other warranties or guarantees issued by the Contractor and or its subcontractors and or by the manufacturer of materials and or equipment supplied by the Contractor and or its subcontractors. If, however, within the applicable warranty period, workmanship, materials, equipment or any portion of the Work is found defective and or fails to fully comply with the requirements in the Contract Documents, the warranty period thereon shall recommence from the date the defect is corrected for the entire warranty period specified by this paragraph (collectively, the "Warranty Period").

9.2 Requirement for Prompt Repairs. During the Warranty Period, upon receipt of written notice from the City or the City's designated representative, the Contractor shall promptly repair or replace or cause others to repair or replace all materials and or equipment that is defective or that otherwise fails to meet the requirements set forth in the Contract Documents. Repairs and or replacements also include repairs and/or replacement of all damages caused to other work by the defective workmanship and or materials. The Contractor shall be fully responsible for all costs incurred.

9.3 Requirement for Delivery of All Written Warranties. Promptly upon completion of the Work, and as a condition precedent to receipt of Final Payment, Contractor shall assign and deliver to the City all written guarantees or warrantees required by the Contract Documents or that are included in the purchase of materials and equipment installed or made part of the Project. Contractor acknowledges and agrees that the possible assignment or transfer of such warranties to others shall have no effect upon the enforcement of such warranties.

9.4 Continued Responsibility for Latent Defects. Nothing set forth in the Contract Documents shall be interpreted or construed to limit the City's or its subsequent assignees' and or representatives' rights to recover from Contractor and or the subcontractors for damages, or to seek replacement or repair for workmanship, equipment and or materials that exhibit latent defects beyond the Warranty Period and for any other guarantees or warranties, express or implied, up until the last date such rights may be extinguished by applicable statutes of repose and or limitations.

Article Ten: Insurance, Bonds and Indemnification.

10.1 Required Insurance. Prior to performing any Work on the Project, the Contractor shall obtain insurance coverage as required by **Exhibit C** to this Agreement (the "Insurance Requirements") and provide to the City documentation demonstrating that it has fully complied with all Insurance Requirements. If requested by the City, in addition to providing Certificates of Insurance, the Contractor shall provide to the City certified copies of their insurance policies

with all attachments, endorsements and exclusions. At a minimum, all Insurance Requirements shall be maintained by the Contractor until its Work on the Project has been completed and all obligations set forth in the Contract Documents have been satisfied, unless a longer period of time is specified in the Insurance Requirements. The existence of insurance shall not be construed to limit the Contractor's liability under this Agreement or at law.

10.2 Required Insurance for Subcontractors. To the extent the Insurance Requirements direct the subcontractors to provide insurance coverage, the Contractor is responsible to make sure that its subcontractors fully comply. Upon request by the City, the subcontractor shall provide written evidence to the City that all such requirements have been fulfilled, specified policies have been procured and all required endorsements have been made. If there is a failure by any subcontractors to comply with the Insurance Requirements, and losses or damages are incurred by the City related to the Project that more likely than not would have been paid in whole or in part by the required policies of insurance, the Contractor agrees it shall pay the loss or damage to the City to the extent and in an amount equal to the amount that more likely than not would have been paid by the required policies of insurance.

10.3 Required Surety Bonds. Within five (5) days after execution of this Agreement and before commencing Work, the Contractor shall obtain and provide to the City a Performance Bond and a Payment Bond each with a Penal Sum in the same amount as the Contract Price identifying the City as the obligee (the "Bond Requirements"). The bonds shall comply with Florida law in all respects. Required bonds shall be issued by a corporate surety licensed to issue bonds in the state where the Project is located and in a form satisfactory to the City, preferably the AIA 312 bond form. To the extent, if any, that the Contract Price is increased in accordance with the Contract Documents, the Contractor shall cause the amount of such bonds to be increased accordingly and shall promptly deliver satisfactory evidence of such increase to the City. The bonds shall also provide that no change to or alteration of this Agreement (including, without limitation, an increase in the Contract Price), extensions of time, change orders, premature payment or overpayment to the Contractor will release the surety from its obligations under the bonds.

10.4 Indemnification by Contractor. To the fullest extent permitted by law, regardless of insurance coverage, the Contractor shall indemnify, save and hold harmless: the City, its officers, directors, principals and employees; the Project Architect and Engineer, their officers, directors, principals and employees (collectively, the "Indemnitees") from and against all claims, judgments, costs, injuries, damages, liabilities, losses, expenses, liens and penalties, including but not limited to reasonable attorney's fees and legal costs including the costs of experts, to the extent attributable to any negligent act or omission, negligent failure to act, negligent fault or default, fraudulent act or breach of this Agreement by the Contractor, its agents, officers, directors, principals or employees, subcontractors or others who are under contract with or subject to the control and or direction of the Contractor with respect to the Work being performed under this Agreement. In addition, the Contractor shall indemnify, save and hold harmless the Indemnitees with respect to any and all claims, liens, losses, costs, injuries, damages and expenses, including reasonable attorneys' fees and legal costs, including the costs of experts, by anyone performing any service for the Contractor or performing pursuant to a contract with the Contractor wherein such person or entity has not been paid any amount claimed due to that person or entity and, as provided by Article Seven above, the Contractor shall promptly discharge all judgments and or liens arising therefrom. The specific obligations set forth herein shall not be construed to negate, abridge or reduce other rights or obligations of indemnity which would otherwise exist as to a party or person identified in this paragraph. This provision shall survive the termination and or expiration of this Agreement.

10.5 Indemnification Obligations to Comply with Controlling Law; Alternative Indemnification Requirements. In the event and to the extent portions of the indemnification obligations set forth in paragraph 10.4 are held invalid or unenforceable pursuant to the applicable laws of the state in which the Project is located, the invalid, illegal or unenforceable provision(s)

shall be replaced by provision(s) which are valid, legal and enforceable, and best represent the intentions of the Parties at the time this Agreement was executed (as evidenced by paragraph 10.4). All remaining indemnification requirements shall continue to be valid and enforceable to the fullest extent permitted by law. If alternative, Indemnification Requirements are included with the Insurance Requirements in Exhibit C, the alternative Indemnifications Requirements shall control and take precedence over the requirements set forth above in paragraph10.4.

10.6 Requirement to Provide Notice of Claims. The Contractor shall notify the City, in writing, in the event it is served with any summonses, notices, notices of lien, letters or any other communication (including verbal communications) alleging any claim or liability against any Indemnitee, the Project and or the Project property that arise from or relates to the Contractor's Work. Said notice shall be delivered to the City within 72 hours of Contractor becoming aware of the existence of any such claim, lien or notice.

ARTICLE 11: Default and Termination.

11.1 Termination by the City for Cause. This Agreement may be terminated by the City for cause effective immediately (or as otherwise directed by the City) upon Contractor's receipt of a Notice of Termination for the following reasons:

1. Contractor's failure to provide personnel and or materials to the Project sufficient to timely complete the Work;

2. Failure by Contractor to remove any lien filed by any of its subcontractors and or suppliers within 10 calendar days of its receipt of a notice of lien;

3. Failure by Contractor to pay its subcontractors or vendors within seven business days of Contractor's receipt of payment from the City for contractually compliant Work performed, and there is no good faith basis for withholding payment of which the City has been notified in writing by the Contractor;

4. Contractor's failure to comply with applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders issued by a public authority;

5. Contractor becomes financially insolvent;

6. Contractor fails to abide by and enforce all proper safety measures; and

7. Contractor's breach of any material provision of this Agreement.

11.2 The City's Rights Upon Termination for Cause. In addition to all other rights the City may have under this Agreement and at law, should there exist cause for Contractor's termination, the City, at its own option, in lieu of and in addition to terminating the Agreement, the City may also:

1. Order Contractor to immediately comply with any term, condition or provision of this Agreement or any other Contract Document; or

2. Perform or arrange to have performed any of Contractor's duties or obligations under this Agreement and reduce the Contract Price in an amount equal to the City's good faith costs incurred in performing or arranging to perform Contractor's duties or obligations. If the City terminates this Agreement for one of the reasons set forth in paragraph 11.1, the Contractor shall not be entitled to receive further payment until the Work is fully completed. All costs and damages to the City caused by the reason(s) for termination shall be deducted from any subsequent payments due to the Contractor for Work properly completed. If the unpaid balance of the Contract Price

exceeds the City's costs in completing the Work (including but not limited to costs for design services, legal fees and other costs caused by the reason(s) for termination), the Contractor shall pay the difference to the City. The Contractor's liability under this paragraph shall extend to and include the full amount of such costs incurred and obligations assumed by the City in good faith under the reasonable belief that such costs or obligations were necessary to: (i) timely protect and complete the Work and or provide labor, materials, equipment, and or supplies to complete the Work; (ii) enter in contracts with others to perform the Work; and or (iii) to settle, discharge or compromise claims, demands, suits and judgments pertaining to or arising out of the Work. An itemized statement of such obligations and payments shall be *prima facie* evidence of the City's damages or costs.

11.3 Termination by the City for Convenience. This Agreement may also be terminated or suspended by City without cause, for the City's own convenience, effective immediately (or as directed by the City) upon Contractor's receipt of the City's notice of termination or suspension for convenience. If this Agreement is terminated or suspended by the City solely for its own convenience, the Contractor shall be paid for all Work properly performed and that meets the requirements of the Contract Documents as of the effective date of termination or suspension, and for all direct, demonstrated, reasonable costs incurred due to the termination, but not for lost profits, lost business opportunities or for any other consequential damages. If the Work is only suspended, the Contractor may be entitled to an equitable adjustment of the Contract Price for Contractor's reasonable, direct costs, if any, caused by the suspension.

11.4 Termination by Contractor. This Agreement may be terminated by Contractor but only for cause 20 business days after the City's receipt of a written notice from Contractor (the "Notice Period") and only for the specific reasons set forth in this paragraph. During the Notice Period, the Contractor must continue its performance of the Work. The City has the right (but not the obligation) to cure the alleged reason for termination during the Notice Period. If the reason is cured (or significant actions are undertaken by the City in good faith to cure during the Notice Period), the Contractor shall withdraw its Notice of Termination and continue to perform its Work but may be entitled to make a claim for additional direct costs, if any, incurred by the Contractor due to the stated reason for Contractor's notice of termination. The permitted causes for termination by Contractor are:

1. Suspension of the Work by the City (without Contractor's consent and not due to the fault of the Contractor) for more than 90 consecutive days;

2. The City's willful violation or directive to the Contractor to violate applicable laws, statutes, ordinances, codes, rules and regulations or lawful orders issued by a public authority; or

3. In violation of this Agreement, the City fails to pay Contractor uncontested amounts due for Work completed in compliance with the Contract Documents within 60 calendar days of the date the applicable Application for Payment was received.

Article Twelve: Resolution of Disputes and Claims.

12.1 Good Faith Negotiations. As a condition precedent to the right to seek a binding resolution of a dispute pursuant to paragraph 12.2 below, the Contractor shall engage in good faith efforts with the City to amicably resolve all claims related to or arising out of Contractor's Work. Good faith efforts shall include but not be limited to attendance at meetings and providing documentation and information reasonably requested by the City related to the dispute or claim, and also, if decided *at the sole and exclusive option of the City*, Contractor's good faith participation in a mediation utilizing the services of a non-party, neutral mediator. If mediation is directed by the City, the Contractor shall attempt to agree upon selection of the mediator. If the Contractor and the City cannot agree upon a mediator, each will select its own mediator

whose only role shall be to consult and agree with the other party's mediator to select a third mediator who shall serve as the mediator to assist in potential resolution of the dispute. If the City decides a mediation will be conducted, the mediation shall be administered by the American Arbitration Association ("AAA") in accordance with its Construction Industry Mediation Procedures in effect as of the date of this Agreement unless both Parties agree otherwise. The mediation shall be conducted in the same locale as the Project unless both Parties agree otherwise. All mediation costs shall be jointly paid by the Contractor and the City. Regardless of the outcome of the mediation, each Party shall pay its own legal costs and fees incurred for the mediation, if any. Any agreement reached through the mediation shall be memorialized in a writing executed by authorized representatives of the Contractor and the City and shall be binding for all purposes upon the Parties and enforceable as a settlement agreement in any court having jurisdiction over the dispute.

12.2 Binding Dispute Resolution. If a dispute is not resolved through Good Faith Negotiations pursuant to paragraph 12.1 above, *at the City's sole and exclusive option*, within ten (10) business days of the City's receipt of a Notice from Contractor seeking binding resolution of the dispute, or upon the City's own initiative to seek binding resolution of the dispute, the City shall elect whether binding dispute resolution will be through arbitration or litigation and inform the Contractor of the City's decision. If the City elects to arbitrate the dispute, the arbitration shall be in accordance with Section 15.4 of the AIA A201-2017, said Section being incorporated by reference into this Agreement as if fully set forth herein. The only exception to the provisions of Section 15.4 shall be with respect to the time in which to make a demand for arbitration. Under this Agreement, neither the City nor the Contractor can initiate a demand for binding resolution of a dispute until such time as the Good Faith Negotiations have been completed in accordance with paragraph 12.1 above, including mediation if a mediation has been directed by the City. The Contractor shall incorporate this paragraph 12.2 and paragraph 12.1 into all agreements with its subcontractors (including the City's exclusive right to decide whether disputes shall be resolved through litigation or arbitration in the event that the City is a party to the dispute) as the sole method of dispute resolution for any and all claims related to or arising from the Project and for which any subcontractor seeks payment or any other relief directly from any Indemnitee identified by this Agreement. The binding dispute resolution shall be conducted in the same locale or venue as the Project unless all Parties agree otherwise.

12.3 Governing Law. This Agreement shall be governed by the law of the state or province (and country) in which the Project is located.

12.4 Claims for Additional Costs or Time. Without waiving and subject to all provisions in Article 8 above, all claims by Contractor for additional compensation and or time in which to perform its Work must be set forth in a written notice served upon the City within fourteen (14) calendar days of Contractor first becoming aware of the facts and or circumstances (or reasonably should have become aware of such facts and circumstances) the Contractor believes entitles it to additional compensation and or time to perform the Work. The Notice must include: the reason(s) for the claim; the date the Contractor first became aware of the alleged bases for the claim; and an initial estimate of the alleged additional costs and or time needed to perform the Work. **Failure to provide Notice in strict accordance with this provision shall result in a complete and irrevocable waiver by the Contractor of the claim.**

12.5 Continued Performance in the Event of a Dispute. The Parties shall endeavor to promptly resolve all claims and other disputes between them in good faith but, in the event of a dispute concerning entitlement and or quantification of additional time or compensation, the Contractor shall continue to perform the Work, without delay, as directed by the City, with, unless otherwise provided herein, full reservations of rights by the City and the Contractor with respect to the claim or other dispute.

12.6 Limited Recourse. To the extent permitted by law, the respective obligations of the City and Contractor shall not constitute the personal obligations of any natural person who is a trustee, officer, director, shareholder, member, partner, partner, principal, employee or agent of City or Contractor. All persons and entities dealing with the City or the Contractor, including the Parties to this Agreement, shall look solely to the assets of the City or Contractor for satisfaction of any liability of the City or Contractor, and shall not seek recourse against the personal assets of any natural person who is a trustee, officer, director, shareholder, member, partner, principal, employee or agent of the City or Contractor. This provision shall not, however, apply to the trust fund obligations set forth above in paragraph 4.14; indemnity obligations owed by the principals or other individuals to the Contractor's bond surety; or personal liability for willful misconduct or acts committed in violation of any duty of corporate loyalty. This provision shall survive expiration or earlier termination of this Agreement.

12.7 No Consequential Damages. Neither the City nor the Contractor shall be liable to the other nor shall make any claim for any incidental, indirect or consequential damages arising out of, or connected in any way to the Project or this Agreement. This mutual waiver includes but is not limited to damages related to loss of use, loss of profits, loss of income, loss of reputation, unrealized savings or diminution of property value and shall apply to any cause of action including negligence, strict liability, breach of contract and breach of warranty. This clause shall not affect the Liquidated Damages contemplated by 2.6 and 2.7.

Article Thirteen: Miscellaneous.

13.1 Mandatory Use of E-Verify System. In compliance with Florida Statute 448.095, the Contractor and all its subcontractors on the Project shall register and utilize the "E-Verify" system of the United States Department of Homeland Security to verify the work status of all newly hired employees, within the meaning of that statute.

13.2 Public Records Requirements. The Contractor shall comply with Chapter 119.0701, Florida Statutes regarding keeping and maintaining public records as set forth in **Exhibit E.**

13.3 Unauthorized Aliens. The City shall consider the employment of unauthorized alien workers by the Contractor or any subcontractor or any vendor for the Contractor a violation of Section 274A of the Immigration and Nationality Act. Such violation shall constitute cause for unilateral termination of this Agreement.

13.4 Current Parking Improvements to Remain. As previously indicated in 2.3.11, lighting, curbs, paving, utilities etc. for parcel I.D. numbers: 182S306000005006, 182S306000008006 and 182S306000011006 (The North Parking Area) are to remain in place and have been excluded from Contractor's scope of Work. Lakeview Center has been granted a license to use those parcels for parking. Access must remain available to Lakeview Center for its utilization of the Noth Parking Area.

13.5 All Debris to be Removed. All waste and recycled debris shall be removed from the site. No backfilling with crushed concrete is permitted.

13.6 Additional Landfield Use Permitted. Contractor may use any legally authorized landfill of its choice regardless of whether it was listed in the Contractor's Proposal.

13.7 Work Hours. Work hours are 6 a.m. local time through 7 p.m. local time, Monday through Saturday unless otherwise specified in the approved demolition permit.

13.8 Liability for Royalties and License Fees. Contractor shall pay all royalties and license fees applicable to the Work. Contractor shall defend and shall indemnify and hold harmless all

Indemnitees identified in the Agreement from all suits, demands, or claims for infringement by Contractor of any patent rights.

13.9 No Advertising or Promotion of Project. The Contractor shall not use its involvement in this Project in its advertising or promotional materials without the City's permission in writing.

13.8 Rights of Third Parties. Nothing in this Agreement shall create or give to third parties any claim or right of action against the City or Contractor except as expressly set forth herein.

13.10 No Waiver Except in Writing. No act or failure to act by the City or Contractor shall constitute a waiver of any legal or contractual right by the City or the Contractor (including but not limited to any change or reduction in the requirements of the Contract Documents) unless such a waiver or abandonment of a right is expressly and specifically set forth in a writing executed by the City's duly authorized representative. No amendments to this Agreement shall be valid or enforceable unless in a writing executed by a duly authorized representative of the City and the Contractor.

13.11 Assignments. Contractor shall not assign this Agreement, in whole or in part, or hypothecate, pledge or assign any payments due to the Contractor under this Agreement without the City's prior written approval. The Contractor, however, agrees that, upon written notice to the Contractor, the City is permitted to assign this Agreement to others, and, in the event of such an assignment, the Contractor shall continue to perform all its obligations under this Agreement.

13.12 The Contractor is Not an Agent of the City. This Agreement is neither intended nor shall be construed to mean that the Contractor is an agent or a representative of the City in any capacity.

13.13 Merger. This Agreement, it Exhibits, and the Contract Documents specifically referenced by this Agreement is the full and complete understanding of all the contractual obligations between the Parties to this Agreement. All other discussions, proposals, promises, representations, writings, communications and understandings related to the subject matter of this Agreement, whether in writing or orally transmitted up to the date of this Agreement, are hereby declared null and void unless the communications and understandings are expressly incorporated into the Agreement as a Contract Document in 3.1. or physically attached to this Agreement.

13.14 Captions. The captions to the provisions of this Agreement are for the convenience of the reader and are not intended or be construed as part of the substantive language.

13.15 Enforcement. If any provision of this Agreement is held invalid or unenforceable, the remainder of this Agreement shall continue to be valid and enforceable to the fullest extent permitted by law. The invalid, illegal or unenforceable provision(s) shall be replaced by provision(s) which are valid, legal and enforceable and best represent the intentions of the Parties at the time this Agreement was executed with respect to the invalid, illegal or unenforceable provision(s).

13.16 Execution Permitted in Counterparts. This Agreement may be signed in counterparts, each of which, when fully executed and attached to this Agreement with its exhibits shall constitute a fully executed and binding Agreement. Any such executed counterparts may be delivered by facsimile or by electronic mail, and the same be deemed effective as originals.

IN WITNESS WHEREOF, the Parties have executed this Agreement on the date first indicated above:

CONTRACTOR	**CITY OF PENSACOLA, FLORIDA**
_____ (Contractor's Name)	_____ Mayor, D.C. Reeves
By_____ President	Attest: _____ City Clerk, Ericka L. Burnett
_____ (Printed President's Name)	Approved as to Substance:
Attest_____ Corporate Secretary	_____ Department Director
	Legal in form and execution:
(CORPORATE SEAL)	_____ City Attorney

PROJECT APPROACH

GENERAL INTRODUCTION

NorthStar Contracting Group, Inc. (NorthStar) has prepared this proposal for demolition and removal in response to the City of Pensacola's Request for Proposal. The NorthStar Team has reviewed the information provided by the City of Pensacola, attended the site walk and has developed a competitive approach that is technically sound and provides for safety throughout all activities. We have responded to City of Pensacola's request and submitted a base bid that follows the requirements of the specifications, which we feel provides the City of Pensacola with the best value.

We will work closely with City of Pensacola as a team and will make every effort to find additional cost cutting, recycling and waste minimization steps that will provide additional value to Owner beyond our bid price and the technical specifications.

NorthStar acknowledges receipt of the RFP documents and addendums, and we have incorporated your requested responses into our proposal.

NORTHSTAR TEAM PROJECT APPROACH

The NorthStar team will deliver to owner the right total solution to successfully complete the former Baptist Hospital Complex demolition of structures, slabs, parking lot, and roadways. We will provide exceptional value and service throughout the project. Our project approach is captured herein and will be integrated through all aspects of the work:

- Expert demolition and remediation methodology
- Strong project management and risk management
- Controlled execution of work tasks
- A foundation of safety
- Waste minimization goals resulting in cost savings
- Commitment to regulatory compliance
- Internal teamwork and partnering with Owner
- Quality and Exceptional value

Expert Demolition and Remediation Methodology

Having studied the designated plant site conditions and the multi-faceted requirements for the disposal/recycle of demolition wastes, the NorthStar Team has developed an organized and systematic sequence of tasks. Starting with work plan development through mobilization, demolition, demobilization, and final reporting, we have considered the often-competing task requirements and chosen sequencing of tasks that safely and cost effectively complete the

Confidential and Proprietary Information
Competition Sensitive – Not for Distribution

project. We have also evaluated numerous waste minimization options to reduce costs and limit Owner's long-term liability.

Strong Project Management

The NorthStar Team has assigned a group of highly qualified managers and task supervisors to lead the Baptist Hospital Complex project. Clear lines of communication with Owner and between team members will be established at the start of the project. Our managers and supervisors are trained to have a keen awareness for maintaining scope, schedule and budget while managing risk and safety issues. In addition, our project management staff has experience with regulatory agencies and has worked with U.S. Environmental Protection Agency (EPA).

CONTROLLED EXECUTION OF WORK TASKS

Having established a systematic sequence of tasks as noted above, the work would be carried out in a controlled manner under the direction of the NorthStar Team's experienced managers and supervisors. A task-specific Job Safety Analysis (JSA) is prepared thinking through each step of the task to identify and eliminate safety or environmental hazards. If differing conditions are encountered, the work tasks will be temporarily halted to allow reevaluation and adjustment of the methodology, equipment, staff and/or safety aspects. Safety and environmental compliance will always be our team's top priorities.

A Foundation of Safety

The NorthStar Team is committed to protecting the health and safety of our workers, Owner Staff, Owner site representatives and others who may be at the site. We will provide thorough safety training for all our workers prior to and throughout the work.

Prompt reporting of monitoring results will be given to workers to keep them apprised of site conditions. The NorthStar Team will fulfill the requirements of Owner's safety process throughout the work.

Self-Performance

The NorthStar Team has the necessary staff and resources to perform the entire demolition and environmental aspects of the project. NorthStar will evaluate and approve subcontractors that have safe working histories and bring value to the Owner. The NorthStar Team will have full control of resources, schedule, and costs. Our intention is to perform the work with multiple major construction crews. All work will be planned and executed in a safe and responsible manner and follow all facility requirements and established JSA.

Waste Minimization Goals Resulting in Cost Savings

The NorthStar Team is giving careful consideration to all material generated by the demolition work. We have and will continue to pursue beneficial reusing/recycling for all materials that leave the site and strive to exceed goals wherever feasible. All other metals will be sorted and processed for maximized value recovery when sold as scrap material. We have used our national and international network of contacts to find recycling and reuse options. We will continue to aggressively pursue potential options currently identified and look for more savings for the City of Pensacola.

Commitment to Regulatory Compliance

The NorthStar Team recognizes the importance of maintaining regulatory compliance throughout this project and is committed to this goal. We will work cooperatively and in conjunction with Owner's Staff and develop good working relationships with the regulatory agencies. Our local staff has a clear understanding of compliance issues and will work with County and State of Florida regulatory agencies as required with all intentions of maintaining the City of Pensacolas current relationship.

Teamwork and Partnering with Owner

NorthStar will approach this project as a team member with Owner and Engineer. We offer the skill sets critical for the successful execution of the work. As part of our approach, we plan to work closely with both the Owner staff and the Owner designated Site Representatives to receive the benefit of their efforts in developing the demolition project to date and with the various specialists from Owner's other agencies involved with the development of this scope. Consistent with the approach conveyed during the bidding process, the NorthStar Team will be a partner with the Owner to meet and exceed the objectives for the controlled demolition and removal of all equipment throughout hospital complex outlined in the provided Scope of Work and additional documents.

Quality

The goal of the NorthStar Team's work efforts will be characterized by the statement, "They Did It Right the First Time". The attention to detail, quality, and environmental compliance goals will be demonstrated in all aspects of the job. The planning and staff demonstrating initiative will produce results that lead to Owner satisfaction.

PROJECT TEAM AND QUALIFICATIONS

Project Teams

NorthStar has provided the City of Pensacola with a highly technical management and construction team with demolition and environmental experience as well as waste minimization expertise. With our mix of technical and construction staff we can deliver a safe and cost-effective project that also meets the State of Florida requirements.

Advantages Provided by Our Team:

- Accelerated performance: NorthStar's direct control of resources, and its technical ability to interface with all involved parties to overlap complex demolition and construction activities, correlates to a reduction in the overall project schedule.
- Interdisciplinary problem solving: With all services provided by a unified team, trained workers will be used to ensure that the discovery of unexpected hazardous materials does not disrupt the schedule. This dovetailing also eliminates finger-pointing and wasteful conflict between different firms.
- Universal coverage throughout the United States: Licensed to perform the needed services in each of the 50 states, our team offers consistent and professional services to you and your customers.
- Reduced subcontractor interfaces: Delivering one point of contact for all preconstruction services during demolition/abatement/environmental. Coordination effort is reduced resulting in lower management expenses.
- Value Engineering: Delivering expert knowledge and techniques to the table during the final design phase. Working with the project team in advance and during implementation, alternative removal techniques and strategies can be developed to achieve the desired result within a compressed schedule and usually at a lower cost.
- Experience with difficult and dangerous conditions: Delivering expertise in working in dense, public areas and occupied facilities. Our experience in these areas will reduce complaints about noise, dust, operational impact, etc., resulting in less management oversight. Our safety methodology, well tested in these environments, will ensure public health and safety.

An Experienced Project Team

The organization chart for the NorthStar Team is attached herewith. A brief biographical summary of the projects teams also is included in this submittal. Full resumes for the project's team are provided as an attachment. The project team has been developed around our concept for delivering a strong team of managers to deliver a quality project while maintaining the health

and safety goals of the technical and regulatory requirements, and coordination of construction that is grouped into major types of work as indicated on the organization chart. NorthStar will comply with Section 3.3 of the RFP and will not change the Project Manager, Superintendent, or Safety Manager without advance notice to the City of Pensacola.

Schedule

The preliminary schedule attached provides our overall project layout with project tasks. Upon award, NorthStar will provide a detailed task driven schedule with manpower loading. This attached preliminary schedule spreads over 19 months to improve project control and maintain a total staff ranging from 40-60 people on site depending on phase. This controlled staff level will improve overall safety control during the project. During the implementation phase of the project, NorthStar will complete three-week look ahead schedules and resource loaded schedules using Primavera P6 to be discussed and assist in monitoring the production of the project. NorthStar will follow Section 3.4 in the RFP regarding all scheduling requirements throughout the project.

NorthStar plans to work a schedule of 10 hours/day Monday-Friday with Saturday being a make-up day only.

NorthStar will complete this project utilizing skilled operators, environmental technicians, and asbestos supervision and project management. We will never compromise the safety of a project by placing unqualified or untrained personnel on the project. We anticipate the project to peak at 60 people onsite. To further breakdown this crew we anticipate the following:

PM, Superintendent, Clerical and Safety	4
Abatement and Universal Waste:	42
Demolition:	14

Planning/Regulatory Plans and Permits

A major early component of this project will be completing all the necessary plan documents and obtaining the necessary permits required to start and implement construction. We have worked with the local, state, and federal agencies in the past and have thoroughly evaluated the requirements so that we clearly understand what is needed and how long it will take to obtain the necessary approvals prior to construction. We will continue the quality relationship that the City of Pensacola has already established with its neighbors and regulatory agencies. NorthStar is familiar with the required permits needed to complete this project and will follow Section 3.2 in the RFP. Upon award, NorthStar will contact and initiate securing the permits.

Regulatory plans required by the Florida Department of Environmental Protection (FDEP) and City of Pensacola requested to implement this project are listed and summarized as follows:

- Structural Demolition Permits
- 10 Day Asbestos Abatement and Demolition Notifications
- Well Closure and Abandonment Permits
- Elevator Closure Notifications
- SWPPP Notification and NPDES Site Permit

Demolition Work Plan – The Demolition Work Plan that is summarized herein will provide the overall schedule and process for implementation of the project. This Plan will also reference other plans (listed below and further described in appendices) required to perform the work in an environmentally sound and a safe manner. The Engineering survey prepared in accordance with OSHA 29CFR 1926.850 will be provided with the Demolition Work Plan.

Site Storm Water Pollution Prevention Plan (SWPPP)

NorthStar will comply with Section 3.6.3 Erosion and Sediment Control and Section 4.4 SWPPP outlined in RFP No. 25-008. NorthStar will use the Geosyntec SWPPP drawings dated January 2025 as a guide and will have a third-party company provide weekly monitoring and will provide a report weekly to the City of Pensacola. The SWPPP will be a thorough document addressing the key issue of effective storm water management and implementation of the Best Management Practices (BMPs) during the project:

- Erosion and sediment control
- Spill prevention and response plan
- Preventative maintenance program
- Tree Protection
- Employee education program
- Inspection and record keeping and reporting program

Site storm water management will be a critical issue to prevent discharging impacted sediment and dissolved constituents off site. We will develop a comprehensive plan for management of storm water during construction.

NorthStar will install the BMPS in accordance with the provided erosion control drawings from Geosyntec dated January 2025. Storm water controls will include the use of Type-III silt fencing, composite filter socks, curb inlet barriers, drop inlet barriers, tree protection around trees to remain, and construction exits. Daily sweeping of paved areas will also aid in eliminating the introduction of silt into the drainage system to remain.

NorthStar will utilize 1,000-gallon, 500-gallon, and multiple 250-gallon double walled fuel storage tank will be used to store fuel onsite. NorthStar will also use a 500-gallon double walled hydraulic oil tank to store 48-weight hydraulic oil onsite. NorthStar will utilize a 350-gallon tote for Diesel Exhaust Fluid (DEF) on site. These tanks will all be placed in tertiary containments and will be monitored during the SWPPP inspections for standing water.

Spill kits and absorbent materials will be on hand near any operating equipment. Close inspection of equipment as it arrives at the site will reduce the likelihood of hose failure. Any hoses that look worn or cracked will be replaced prior to placing equipment into service.

Drop Inlet Barriers will be attached to storm-drain grates to provide filtration of rainwater to capture sediment from rainwater runoff. Composite filter socks will be attached to storm-drain grates to encircle the drain to capture oil whenever oil is being handled, drained, or vacuumed from equipment.

The tree protection will be installed and maintained per Drawing FHBC-003 (Attachment A in the RFP) and Section 3.13 in the RFP. NorthStar will have a licensed subcontractor install and maintain the tree protection throughout the project. No equipment, material storage, or work will occur within the limits of the tree protection areas.

Confidential and Proprietary Information
Competition Sensitive – Not for Distribution

PROJECT RISK MANAGEMENT, COMMUNICATIONS AND REPORTING

Project Risk Management

The NorthStar Team has developed a strong team that will work closely with Owner to deliver a safe, efficient, well-planned project that meets Owner and regulatory requirements. Our organization chart presents a structure that will allow us to deliver effective and timely communications to Owner. Primary site communications between Owner site Managers and the NorthStar Team will occur with the Project Manager. The Project Manager will be responsible for maintaining a common link with all the activities that occur over the project duration and closely manage project issues.

NorthStar evaluates all tasks on a project for risk associates with health and safety, water intrusion from groundwater, working on elevated surfaces to high work with equipment and other high-risk tasks. Evaluations are completed prior to any work beginning and plans developed. Once the risk is identified, NorthStar's Manager evaluates and develops plans to mitigate the risk.

NorthStar has tools in place that we utilize in our Risk Management Evaluation, Implementation and Audit. NorthStar tools related to our risk management plan are:

- Assignment of the Project Management Team.
  - Develop the team with the best skill sets for this project.
    - The Project Manager is responsible for the project risk assessment and management plan and implementation including Quality Control as well as reporting to the Project Executive and Management Group.
    - The Project Manager plays a key role in the development of the final SSH&S plan with the help of the Safety Officers.
    - The Project Manager plays a key role in the development of the site-specific work plan identifying high-risk activities and implementation of plans to mitigate the risk.
- Identify the techniques that are to be used to identify risk factors at the beginning of the project and on an ongoing basis.
  - Utilize the Job Hazard Analysis, (JHA) as a tool to identify risk and hazards and methods of elimination and/or mitigation.
  - Conduct JHA walkthroughs with all parties involved prior to the start of the task to assist in the identification. Include Task Managers, Task Supervisors and Foreman.
  - Task Managers and Task Supervisors should conduct a training/identification meeting prior to starting any task.
    - Ensure that the task tradesman is familiar with the process and understands the hazards.
    - Make any necessary changes identified during the JHA walk through prior to starting

any task.

- Audit the process on an ongoing basis
  - Utilize safety audits, site "walk around" and task manager's informational meetings to ensure the process is properly implemented and working as planned.
- Document all findings
  - Job safety audits
  - Supervisor's logs

Communications

The NorthStar Team will prepare and implement communications plan and procedures to ensure timely and appropriate generation, collection, dissemination, storage, and ultimate disposition of project information. These critical links among people, ideas, and information will be established so that everyone involved in the project is able to send and receive communications. Communications procedures will include items such as:

- Well written work plans
- Pre-construction meetings
- Safety meetings and safety communications
- Weekly progress meetings
- Routine schedule updates
- RFIs to client
- Weekly reports
- Monthly reports
- Final Report

The chain of command between workers will be established and used to facilitate clear communication. Where work tasks have the potential to overlap, communications between the various work crews will be established and discussed during the daily safety meetings and JHA review meetings to allow safe and efficient execution of tasks. The chain of command between the City of Pensacola and NorthStar is identified in the organizational chart and is a guide to the responsibilities of the team. It has been, and will continue, to be a priority of NorthStar to ensure the client is current with the knowledge of the work in progress and the work upcoming. Should the occurrence arise of the discovery of an unknown or changed condition or community concern or event, the NorthStar staff will first and foremost clear the work area for safety and then verbally contact the client onsite representative and follow the JSA, contract specifications and NorthStar guidelines by notifying the City of Pensacola in writing within 24 hours of the discovery and/or verbal notice.

Project Meetings

NorthStar will conduct a weekly progress meeting at the site to assist in monitoring the progress, discussing challenges and reviewing reports. The attendees at these meetings will be a designated City of Pensacola representative and the Site Management from NorthStar. An agenda will be developed and circulated, and the intent of the meetings is to resolve any open issues, review and update schedules and review production. All issues will be on the agenda to include the following: Safety concerns, the City of Pensacola Critical work, NorthStar Environmental and Demolition work, and all Subcontractor work.

Weekly Project Reports

The NorthStar Team will prepare project reports weekly as requested by the City of Pensacola, to maintain well- planned coordination of construction activities., per Section 6.2 in the RFP. Weekly status reports will include:

- Engineering status
- Demolition status and notifications when structures are 60%, 90%, and 100% complete
- Any upcoming safety submittals
- Major “must do” items for the next one to two weeks
- Three (3) week look ahead schedule using Primavera P6
- Production reports showing previous months and current month to date
- Waste and Scrap Material shipping information

Project Documentation and Final Reports

A project office will be established with a clear and concise electronic and/or paper filing system for all project documents. These documents will include detailed daily field/progress reports, communication records, health and safety records, analytical testing records, regulatory compliance records, off site shipments, and all other appropriate project documentation.

Detailed collection and filing of these records will also allow timely and accurate preparation of the final report and transfer of all information to electronic format as requested by the City of Pensacola per Section 6.3 of the RFP. The post-constructions submittals will include:

- Final waste manifests with disposal facility signatures
- Final copy of building permit close out documentation
- Release of lien when final payment is received
- Final copy of utility close out documentation

PROJECT SAFETY AND ENVIRONMENTAL PROGRAM

General Information

The NorthStar Team will utilize the provided Project Specific Health and Safety outline as guidelines for the development of our Site Specific Health and Safety Plan (SSHASP) in compliance with Section 3.5 of the RFP. Our SSHASP plan will be developed to:

- Operate in an occupationally safe manner
- Protect the health and safety of NorthStar's employees, the City of Pensacola's employees, the customers, and the community in which we operate
- Minimize and eliminate to the extent possible injuries, illness, and environmental releases associated with our work
- Comply with applicable laws, regulations, and permits
- Reflect the value that our companies place on health and safety

The SSHASP establishes a process to address the overall health and safety during all phases of the work. In addition to these project-specific requirements, the following corporate health and safety programs, regulatory requirements and policies are adopted and incorporated by reference:

- NorthStar Safe Work Practices Manual
- State of Florida laws and regulations
- OSHA Construction Industry Standards 29 CFR 1926 Subpart T, for Demolition
- OSHA General Industry Standards 29 CFR 1926.65, for hazardous waste work
- City of Pensacola Safety Standards

This plan will describe the administrative aspects of the health and safety programs of the participating companies and the requirements of the health and safety programs that each employee is expected to maintain. A written preliminary SSHASP has been developed for review and is included as **Attachment F** of this proposal package.

Project Environmental Health and Safety Review/Job Hazard Analysis (JHA)

Before work on any major task (and for subtasks that have hazards different from the major tasks) begins, the NorthStar team will complete a review of the task and identify potential hazards that may be encountered or are present in the area.

The JHA will be developed with input by the Health and Safety Officer, PM, Supervisors, and Client Representative/Safety. Once the environmental and safety hazards are identified and addressed

in the JHA the entire work force for this task will participate in a JHA review before any work starts. NorthStar will ensure that the entire work crew is familiar with the hazards and environmental concerns and that the task crew participates in development, training and understanding the JHA.

Pre-construction Conference

A pre-construction conference will be held prior to starting construction. This meeting will be used for the introduction of the management team and to clearly establish project safety protocols and lines of communication.

Mobilization

Set Project Facilities

The first step in site work will be to establish efficient project facilities that allow rapid and real time communication with the entire project team. NorthStar will set up an office trailer for its management team, a break trailer for the crew members, and a trailer for the City of Pensacola representative in the north parking lot area of the campus. NorthStar will set up restrooms in the trailer and portable restrooms with hand-wash stations as well in the area. NorthStar will have the restrooms serviced at least once a week and cleaned at least once a week throughout the entirety of the project in compliance with Section 5.0 of the RFP.

Mobilization of Equipment

Equipment mobilization will occur over a staged and well thought out time frame consistent with the project schedule. Initially, equipment such as forklifts, boom lifts, and skid-steer loaders will be mobilized to establish site controls and material handling for the asbestos and universal waste removal phase of the project. The excavators, haul trucks, loaders, and other large heavy equipment will be delivered as necessary for the demolition portion of the project.

Coordinate with Subcontractors and Vendors

NorthStar will manage and coordinate all self-performed work as well as sub-contracted work. NorthStar will hold Daily morning Safety and Operation meetings to coordinate the day's activities with all NorthStar team members and subcontractors to ensure an organized and safe project site.

Establish Site Controls

Site Security and Surveillance

All personnel entering the site will sign in and out at the NorthStar Office Trailer or at an agreed upon location with the City of Pensacola daily per Section 3.7 of the RFP. Employees will park inside the fenced in area in the North Parking Lot in a designated area.

All personnel who will be onsite on a regular basis or working on the site will receive safety orientation prior to work. No one works alone. NorthStar uses the buddy system for all tasks. Visitors who have not received orientation must be escorted by employees who have received the site orientation. Mechanics who have had orientation but did not attend the morning safety meeting must receive a JSA briefing by the onsite safety officer prior to entering the site to start work.

NorthStar will construct a 6-foot-high chain link fence around the perimeter of the property per Section 3.7 of the RFP. The perimeter fence will have man-door gates and vehicle access gates at locations agreed upon between NorthStar and the City of Pensacola. NorthStar will add privacy slats and/or fence coverings as needed or as identified in the Demolition Permit.

Additional construction fencing and/or barricading will be used in high-risk areas within the project. These procedures will be fully disclosed in the final Logistics Plan and will be further developed with the City of Pensacola after the award. Red danger barricade taped areas are a DO NOT ENTER unless authorized by the designated spotter in the work area. Barricade tapes will have barricade tags on all sides with contact person and phone numbers for people having to enter the area either on shift or off shift.

Demolition Work Plan Introduction

NorthStar has prepared the Demolition Work Plan to provide the City of Pensacola with a basis for understanding the NorthStar Team approach to your project. This work outline is organized to follow the future work plan to be prepared specifically for the project and contains details in key areas to provide our thought process and procedures for safely and efficiently implementing your project.

Work Plan Organization

This Work Plan has been prepared to follow the general sequence in which the project will be implemented from initial planning through implementation and closeout. This Work Plan provides an outline of our proposed work plan as well as a discussion regarding our technical approach to implementing this project.

Site Setup

Office Trailers

1 - 36’x 60’ break room trailer and 1 – 12’x55’ office trailer for NorthStar and 1 – 8’x24’ office trailer for the City of Pensacola will be set up in the North Parking Lot area and hooked up with electricity. The trailers will be plumbed with either onsite water or non-potable water tanks and septic systems. The septic systems will be serviced at least once per week and the trailers will be cleaned at least once per week, or as often as deemed necessary.

Storage Containers

2 each 8' x 40' shipping containers will be used for storage of tools, equipment, and consumable materials. This will be staged next to the office trailers.

Material Handling

Trash and scrap metal dumpsters will be staged in or near the work areas

Trash & Debris

There will be a large volume of C&D debris created during this project. NorthStar will utilize large 50-CY+ trailers as well as 30-CY dumpsters to haul the C&D to an offsite landfill.

Scrap Metal

Steel scrap will be prepared to truck size for offsite shipment within the immediate work area. Most scrap steel will be live loaded into large steel dump trailers and removed daily. Smaller material will be placed into scrap metal dumpsters and removed as needed.

NorthStar will segregate the nonferrous materials into scrap metal dumpsters and remove as needed throughout the project.

Conceptual Means and Methods for Dismantlement

1. Dust/Debris Mitigation Control

Fugitive Dust Control Plan (FDCP)

NorthStar will comply with Section 3.6.1 of the RFP for air monitoring and dust control throughout the entirety of the demolition project. NorthStar will control Fugitive Dust with the use of pre-wetting, use of a water truck or water hoses to knockdown dust at the source, and misters and foggers as needed to prevent fugitive dust from leaving the area. NorthStar has outlined **Fugitive Dust Control in Sec. 4, page 23 of Attachment F** in more detail.

Oils, Lubricants and Coolants

Equipment identified during OSHA Engineering Survey Walk down as potentially containing oil, coolants, and other chemicals or lubricants will be drained and marked drained. Before the component is disassembled and scrapped, the unit will again be drained to capture any residual material that may have settled since the draining was performed.

Job Specific Site Dismantlement and Removal Plan Job

Sequence

NorthStar will install all the erosion control BMPs around the work areas. During the abatement process, NorthStar will close the abandoned wells with assistance from a licensed subcontractor. NorthStar will demolish the three (3) Medical Towers and the portion of the main hospital connecting to the central tower including the slabs and underground utilities (where feasible), followed by all the buildings to the west, south and east of the Main Hospital (leaving these slabs for now), followed by the Main Hospital Building down to slab, and finally all the remaining slabs and underground utilities. NorthStar will then perform all final site restoration. NorthStar will remove all the asphalt from the North Parking Lot area following all the structural demolition.

Site Map

Equipment

Equipment utilized for the demolition of the hospital complex include.

- 1 Komatsu PC490 High Reach (110') Excavator with shears and processor
- 1 LinkBelt 800 excavator equipped with demolition shear, bucket, and 16k hydraulic breaker
- 1 Komatsu PC490 excavators equipped with bucket & thumbs
- 1 Komatsu PC490 excavators equipped with 12k hydraulic hammers & buckets
- 2 Komatsu PC360 excavator equipped with concrete jaw processors and buckets
- 1 4-5 CY articulated Front End Loaders
- 2 30-ton articulated haul trucks
- 1 60' Manlifts
- 2 Skid Steer Loaders
- 1 Mini Excavator

1. **Installation of Erosion Control BMPs**
   NorthStar's subcontractor will handle the installation of all silt fencing, tree protection, construction entrances, etc. as discussed in detail previously on pages 6-7 of this Work Plan. NorthStar will inspect and maintain the BMPs following their installation.

2. **Well Abandonment**
   NorthStar will have a licensed subcontractor perform the well abandonment per Section 3.11 and Attachment F of the RFP prior to major demolition activities at the project site. NorthStar will close all well permits (if active) with the City of Pensacola and/or State of Florida and provide the documentation to City of Pensacola for its records.

3. **Area A Demolition**
   NorthStar attached a site map above and will be referencing that site map for the Demolition Plan. NorthStar will follow Section 3.8 in the RFP throughout the demolition process. NorthStar will close all elevator permits with the City of Pensacola and/or State of Florida prior to structural demolition per Section 3.10 of the RFP. NorthStar will follow Section 3.9 of the RFP while performing the cut/cap of all utilities prior to the structural demolition. NorthStar will make efforts to salvage electrical equipment, pumps, valves, switches, gensets, etc. prior to structural demolition per Section 3.15 of the RFP.

   NorthStar does not intend to do significant interior demolition of drywall, doors, ceiling tiles, etc. prior to the complete structural demolition. However, in some circumstances it may be beneficial to remove some of the C&D waste by hand to make the final clean up and waste segregation easier on the equipment. NorthStar will inspect the structures during and following the asbestos abatement and universal waste removal portions of work to plan accordingly. If NorthStar decides to perform any interior demolition, we will provide a specific AHA for the individual structure and area of work.

   NorthStar will begin structural demolition of Area A following the asbestos abatement and universal waste removal. NorthStar will have a licensed electrician to isolate and de-energize these structures prior to structural demolition. NorthStar will cut and cap all sewer, water, and mechanical utilities from these structures as well.

   Once all utilities are cut, capped, and verified, NorthStar will set up a demolition zone with danger tape (or red chain) and barricade tags around the structures. NorthStar will begin demolition from the west working our way east through the structures using excavators with bucket/thumb and/or shear attachments. NorthStar will separate the concrete, brick, and steel from the C&D during the demolition and will stage and load the material out as we move east. NorthStar intends to demolish the structure down to the slab for now. NorthStar will continuously clean the area during and after demolition to ensure a safe working environment.

4. **Area B Demolition**
   NorthStar will begin structural demolition of Area B following the asbestos abatement and universal waste removal. NorthStar will have a licensed electrician to isolate and de-

energize these structures prior to structural demolition. NorthStar will cut and cap all sewer, water, and mechanical utilities from these structures as well.

Once all utilities are cut, capped, and verified, NorthStar will set up a demolition zone with danger tape (or red chain) and barricade tags around the structures. NorthStar will begin demolition from the west working our way east through the structures using excavators with bucket/thumb and/or shear attachments. NorthStar will separate the concrete, brick, and steel from the C&D during the demolition and will stage and load the material out as we move east. NorthStar intends to demolish the structure down to the slab for now. NorthStar will continuously clean the area during and after demolition to ensure a safe working environment.

5. **Area C – Medical Tower 3**

NorthStar will begin structural demolition of Area C following the asbestos abatement and universal waste removal. NorthStar will have a licensed electrician to isolate and de-energize this structure prior to structural demolition. NorthStar will cut and cap all sewer, water, and mechanical utilities from this structure as well.

NorthStar will set up barricades inside Tower 2 (Area D) to isolate the single-story connecting structure from Tower 2 to Tower 3. NorthStar will set up barricades on the exterior of the structure as well. NorthStar will demolish the connector building between Towers 2 and 3 first from the south working north. NorthStar will separate the concrete, brick, and steel from the C&D during the demolition and will stage and load the material out as we move north. NorthStar intends to demolish the structure down to the slab for now. NorthStar will continuously clean the area during and after demolition to ensure a safe working environment.

After the connector building demolition, NorthStar will use the PC490 HRD (high reach) with shear attachments to demolish Tower 3 from the top-down systematically bay-by-bay. The high reach will focus on the roof level down to about 30’ high. Once the structure is down to roughly 30’ tall, the LinkBelt 800 with shear attachment will finish the lower portions of the structure. NorthStar will demolish the structure from south to north. NorthStar will leave the slab for now and continuously clean up, separate material, and load out as we go through. NorthStar will take great care as we approach the north wall to bring that wall to the south and into the structural footprint.

6. **Area D – Medical Tower 2**

NorthStar will begin structural demolition of Area D following the asbestos abatement and universal waste removal. NorthStar will have a licensed electrician to isolate and de-energize this structure prior to structural demolition. NorthStar will cut and cap all sewer, water, and mechanical utilities from this structure as well.

NorthStar will set up barricades inside Tower 1 (Area E) to isolate the single-story connecting structure from Tower 2 to Tower 1. NorthStar will set up barricades on the exterior of the structure as well. NorthStar will demolish the connector building between

Towers 1 and 2 first from the south working north. NorthStar will separate the concrete, brick, and steel from the C&D during the demolition and will stage and load the material out as we move north. NorthStar intends to demolish the structure down to the slab for now. NorthStar will continuously clean the area during and after demolition to ensure a safe working environment.

After the connector building demolition, NorthStar will use the PC490 HRD (high reach) with shear attachments to demolish Tower 2 from the top-down systematically bay-by-bay. The high reach will focus on the roof level down to about 30' high. Once the structure is down to roughly 30' tall, the LinkBelt 800 with shear attachment will finish the lower portions of the structure. NorthStar will demolish the structure from west to east. NorthStar will leave the slab for now and continuously clean up, separate material, and load out as we go through. NorthStar will take great care as we demo the north wall to bring that wall to the south and into the structural footprint.

7. **Area E – Medical Tower 1**

NorthStar will begin structural demolition of Area E following the asbestos abatement and universal waste removal. NorthStar will have a licensed electrician to isolate and de-energize this structure prior to structural demolition. NorthStar will cut and cap all sewer, water, and mechanical utilities from this structure as well.

NorthStar will use the PC490 HRD (high reach) with shear attachments to demolish Tower 1 from the top-down systematically bay-by-bay. The high reach will focus on the roof level down to about 30' high. Once the structure is down to roughly 30' tall, the LinkBelt 800 with shear attachment will finish the lower portions of the structure. NorthStar will demolish the structure from south to north. NorthStar will leave the slab for now and continuously clean up, separate material, and load out as we go through. NorthStar will take great care as we approach the north wall to bring that wall to the south and into the structural footprint.

8. **Area F – Main Hospital Outbuildings**

NorthStar will begin structural demolition of Area F - Outbuildings following the asbestos abatement and universal waste removal. NorthStar will have a licensed electrician to isolate and de-energize these structures to the east and south of the Main Hospital prior to structural demolition. NorthStar will cut and cap all sewer, water, and mechanical utilities from these structures as well.

NorthStar will set up barricades inside the Main Hospital structure leading to the east side one- and two-story structures prior to demolition as well as on the exterior of the structures. NorthStar will demolish the east side one- and two-story structures leading up to the taller Main Hospital using the LinkBelt 800 with shear and other assist machines with bucket/thumb attachments. NorthStar will leave the slab for now and continuously clean up, separate material, and load out as we go through.

Following the east side structures, NorthStar will set up barricades inside the Main Hospital leading to the south side one- and two-story structures. NorthStar will demolish the south side one- and two-story structures leading up to the taller Main Hospital using the LinkBelt 800 with shear and other assist machines with bucket/thumb attachments. NorthStar will leave the slab for now and continuously clean up, separate material, and load out as we go through.

9. **Area F – Main Hospital**

   NorthStar will begin structural demolition of Area F – Main Hospital following the asbestos abatement and universal waste removal. NorthStar will have a licensed electrician to isolate and de-energize the Main Hospital prior to structural demolition. NorthStar will cut and cap all sewer, water, and mechanical utilities from the Main Hospital as well.

   NorthStar will use the PC490 HRD (high reach) with processor attachment to demolish the Main Hospital from the top-down systematically bay-by-bay. The high reach will focus on the roof level down to about 30’ high. Once the structure is down to roughly 30’ tall, the LinkBelt 800 with shear and/or bucket attachment will finish the lower portions of the structure with assistance from the other excavators. NorthStar will demolish the structure from south to north, while always working on the lowest level slab-on-grade. NorthStar will start on the east side portion of the main hospital first, then the west side, and finishing up through the central main section of the Main Hospital. NorthStar will leave the slab for now and continuously clean up, separate material, and load out as we go through. NorthStar will take great care as we approach the north wall to bring that wall to the south and into the structural footprint.

10. **Boiler House and Northwest Structures**

    Following the Main Hospital demolition, NorthStar will demolish the northwest structures including the Boiler House. NorthStar will demolish these buildings from the top down and from south to north. NorthStar burners will use torches to dismantle portion of the boilers and heavy mechanical equipment.

11. **Concrete Slab Demolition & Underground Utility Removal**

    NorthStar will use excavators with hydraulic breakers, processors, and bucket/thumb attachments to break up the concrete slabs in prep of crushing. NorthStar plans to stage all the concrete material for crushing on the western side of the north parking lot area. NorthStar will use 30-ton rock trucks and/or 20-CY roll offs to move the concrete from the demolition area to the west side of the north parking lot.

    Following the concrete slab removal, NorthStar will remove all underground utilities back to their source (or a location determined by the City of Pensacola) using excavators with bucket/thumb attachments. All the soil removed to reach the underground utilities will be immediately put back into place as to not leave open excavations.

12. Concrete Crushing and Backfill

NorthStar will stage the concrete for crushing in the western portion of the north parking lot. NorthStar will use a crusher to crush the material to meet Specification 911 FDOT standards for road base. NorthStar will use crushed concrete as backfill in areas throughout the site needed to bring the site back to natural contours prior to permanent site restoration. NorthStar will remove all remaining crushed concrete from the site per RFP.

Material will be pulled from the stockpile and fed to the impact crusher. The impact crusher is equipped with a radial stacker. After the stockpile off the crusher reaches the discharge belt the radial stacker will be moved to the side and continue stacking crushed concrete. After the stacker makes a complete sweep of 90 degrees the crusher and the stacker will move forward to complete another pass with the stacker. This process will be repeated until all material is crushed.

13. North Parking Lot Asphalt and Restoration

NorthStar will mill all the asphalt in the north parking lot area and remove from the site. Following all the asphalt removal, NorthStar will place topsoil throughout the north parking lot area prior to seeding the area for site restoration. NorthStar will propose a seed blend depending on the time of year to the City of Pensacola for approval prior to hydroseeding for regrowth.

14. Site Restoration

NorthStar will cover the backfilled areas with topsoil prior to hydroseeding closely after concrete slab demolition and removal. NorthStar will propose a seed blend depending on the time of year to the City of Pensacola for approval prior to hydroseeding for regrowth. NorthStar will follow Section 3.16 of the RFP to ensure the site does not hold water and has positive drainage.

NorthStar will complete a ground penetrating radar survey following final site restoration to provide underground As-Built drawings for the City of Pensacola. NorthStar will also perform a topography survey for final As-Built drawings for the City of Pensacola for future use.

Demolition Equipment

Mobile Equipment

Mobile / Mechanical Equipment

Safety - All mobile/hydraulic equipment operators will be formally trained in the use of specified equipment.

All equipment will be inspected prior to each use. Travel shall be limited to an approved logistic plan and speeds. Safety equipment such as seat belts, brakes, horns, back-up alarms and fire extinguishers will be always in good operable condition. Maintenance shall be performed by skilled tradespersons and only after effective lockout/tagout of energy sources has been performed. NorthStar will perform all equipment maintenance in a designated area when feasible per Section 3.18 of the RFP. NorthStar will ensure to capture and clean up all oil leaks in accordance with the SWPPP.

Other Equipment

Safety - Use of other equipment shall be by workers skilled in the use and maintenance of specified equipment. All electrical equipment shall be ground fault circuit protected. Maintenance shall be performed by skilled tradespersons and only after effective lockout/tagout of energy sources has been performed.

Personal Protective Equipment

Safety – Personal protective equipment shall be provided to all workers. Workers shall be trained in the effective use of any equipment prior to issue. All equipment shall be inspected prior to each use.

Only equipment considered to be in a condition like new shall be allowed for use.
Equipment:

- Hard hats that meet ANSI Standard Z89.2
- Safety glasses with side shields or goggles that meet ANSI Standard Z87.1
- Full face shields when spraying liquids or sand blasting
- Work boots with metatarsal protection that meet ANSI Standard Z41.2
- Ear plugs and earmuffs when noise levels exceed 85 dB for an eight-hour time weighted average
- Gloves
- Dual cartridge respirator
- Powered air purifying respirator
- Safety harness with lanyard

Labeling and Disposing of Waste

During waste removal activities, barrier tape demarcating both the work and staging areas to restrict entry by unauthorized visitors will be placed around the controlled work area. Signs shall be posted at all entrances to regulated work areas clearly communicating the hazard associated within the work and/or staging area. Drums, containers, or wrapped material will be labeled with the date the waste was containerized, name of the waste generator and the location at which the waste was generated, hazard communicating label and DOT Label for transportation.

All regulated waste will be packaged in a totally enclosed manner, handled, stored, and disposed of in accordance with Federal EPA Protocol and OSHA's Hazard Communication Regulations.

Waste Disposal Plan

(For detail on haulers and disposal & recycling facilities see **Attachment E**)

Hazardous Waste

The Hazardous Waste Management Plan (HWMP) will provide guidance for the safe and compliant management of hazardous waste by NorthStar. Reviewing the HWMP is the first step in understanding methods to minimize all potential liabilities associated with the handling of hazardous waste and for ensuring compliance with all applicable hazardous waste regulations. Additional information and guidance are provided through training and access to internal and contract resources.

The first step in the management of hazardous waste is to determine whether a material is a waste, and if so, is it hazardous. Subsequent steps are used to properly classify the waste and determine the action necessary for proper management of the waste.

Materials are usually considered "waste" when the generator has determined that the material has no further use and will be discarded. Hazardous waste regulations apply to any material that will be discarded or is likely to be discarded. The latter point is important because materials that have no further use and will eventually be discarded may be considered hazardous waste by regulatory agencies even though there are no current plans to discard the material. Therefore, it is imperative that the site Waste Coordinator be consulted to see if materials will be stored for long periods without disposal.

Waste materials can be solid, liquid, semi-solid or compressed gas. All such materials must be evaluated to determine if the hazardous waste regulations apply. Hazardous waste that is determined through established codes, regulations, and characteristics to be hazardous will be removed from the site under the supervision of NorthStar, by an Owner approved and licensed disposal transporter for transport to an Owner approved disposal facility.

Determination Process

Simply defined, a hazardous waste is a material with properties that make it dangerous or capable of harming humans or the environment if not properly managed. Making the determination of whether a waste is hazardous is complicated and requires an extensive understanding of such information as the waste constituents, how it was generated, the material's chemical and physical characteristics, understanding of USEPA and FL regulations and experience classifying waste products. Basically, the regulatory requirements for determining whether a waste is a hazardous waste are made by answering the following questions:

- Is the material excluded from the definition of solid or hazardous waste?
- Is the material exempted from regulation?
- Is the waste listed as a hazardous waste in the USEPA Tables?
- Does the waste exhibit one or more of the four hazardous characteristics: ignitability, corrosivity, reactivity or toxicity?
- Is the material a state regulated waste?

Material is a hazardous waste if the USEPA or the State of Florida specifically lists it as a hazardous waste or if it exhibits a hazardous characteristic. Two methods can be used to determine if the waste exhibits hazardous characteristics: testing or applying generator knowledge. Testing must be done following strict regulatory protocols established by FL and USEPA. Generator knowledge involves applying an understanding of the hazardous nature or characteristics of waste based on the materials or processes used to generate the waste. The Waste Coordinator will make the determination as to whether a waste is hazardous or non- hazardous.

Non-Hazardous Waste

If a waste is not listed as a USEPA or FL hazardous waste or does not exhibit any of the hazardous waste characteristics, it is a non-regulated (non-hazardous) waste. It is important to note that non-regulated and non-hazardous by USEPA and the State of Florida does not mean that waste does not exhibit any characteristics that could be harmful to human health or environment. Therefore, it cannot be assumed that these wastes can be disposed via the sanitary sewer, or with other solid waste. The Non-Hazardous Waste Management Plan will be developed that outlines the procedures NorthStar will take to properly manage non-hazardous wastes.

Universal Waste

Universal waste is a category of hazardous waste that poses less risk to human health and the environment. Universal waste includes lamps, batteries, intact mercury containing devices, cathode ray tubes, some pesticides, and antifreeze. As the name suggests, these types of waste are universally generated, in nearly every type of business or industry, in schools, and in private homes.

Universal waste is managed in accordance with the Florida Requirements for Universal Waste Management. The Universal Waste Management Plan will be developed that outlines the procedures NorthStar will take to properly manage universal waste.

Waste Code Designation

After a material has been determined to be a hazardous waste, the next step is to designate a code for the waste. To minimize errors in designating hazardous waste codes, the classification process is managed by the Waste Coordinator.

Generator Status

Concurrently with determining whether a regulated hazardous waste is being generated, the generator classification must be determined. Each generator category has specific generation, accumulation and storage requirements and corresponding time limits. Knowledge of the generator category enables NorthStar to ensure that the quantity of waste generated, how the waste is accumulated and storage time limits, etc., comply with all Florida Environmental requirements.

- Large Quantity Generator (LQG) Generation: An LQG generates greater than or equivalent to the following quantities:
- 1,000 kg/month (2,200 pounds) of hazardous waste in any single month; or
- 1 kg/month (2.2 pounds) of acutely hazardous waste in any month.
- Small Quantity Generator (SQG) Generation: A SQG generator generates less than the following quantities in each calendar month:
- 100 kg to 1,000 kg (220 to 2,200 pounds) of hazardous waste
- Conditionally Exempt Small Quantity Generator (CESQG) Generation: A CESQG generates less than or equivalent to the following quantities:
- 100 kg/month (220 pounds) of hazardous waste in any single month

USEPA Identification Numbers

USEPA requires all hazardous waste generators to register their generator status by obtaining a USEPA Identification Number. This number is used to track waste from generation to ultimate disposal, and beyond. The City of Pensacola will provide NorthStar with its USEPA ID number before treating, storing, disposing, recycling, or transporting (or offering for transport) hazardous waste. USEPA ID numbers are site-specific numbers assigned to generators, transporters, and treatment, storage, disposal, or recycling facilities, and need only be obtained once.

Storage Requirements

Proper storage of hazardous waste is critical to ensuring personnel safety and regulatory compliance. Accumulation quantity limits, accumulation time limits, storage, and handling methods, etc., are factors that affect safety and regulatory compliance.

- NorthStar will coordinate the use of a designated Central Accumulation Area (CAA) with Owner where waste is stored awaiting transportation off-site to a Treatment, Storage, Disposal, and Recycling Facility (TSDRF); and has developed a temporary storage program that permits waste to accumulate near the point of generation. Temporary storage areas are referred to as Satellite Accumulation Areas (SAA).
- The requirements for hazardous waste storage involve the selection of proper waste containers, waste identification and labeling, establishment, and storage in designated locations (SAAs and the CAA), meeting specified time limits and movement from an SAA to the CAA pending shipment offsite to a TSDRF.

Waste Packaging

Proper packaging of hazardous waste is necessary to ensure safe transportation from the point of origin to ultimate disposal. The selection of appropriate containers helps prevent leaks and spills that may result in human exposure or environmental release during material handling, storage, and transport. Routine handling occurs on the campus, in transit to the disposal facility or during the disposal process. The selection of appropriate containers is only to be completed by the Waste Coordinator.

Determination of waste container type is based primarily on the chemical characteristics of the waste contained, waste generation rate, SAA considerations and disposal method.

Labeling

To ensure that the required information concerning the contents and hazards of the container are documented and communicated, waste containers must be properly labeled. Labeling requirements are based on the intended disposition of the container; whether it will be stored onsite in a SAA, in the CAA or shipped off site for ultimate disposal at a TSDRF. The labeling requirements for waste stored on site are found below.

- The words "Hazardous Waste;"
- Words that identify the contents of the container (No symbols or abbreviations).
- USEPA and/or OH hazardous waste codes; and
- Date waste began accumulating in the container.

Confidential and Proprietary Information
Competition Sensitive – Not for Distribution

Training

Appropriate training is provided to ensure that individuals involved in hazardous waste generation and disposal understand regulatory requirements and methods to minimize hazards and risks associated with the management of hazardous waste. This training may include instruction in USEPA, State of Florida, OSHA and USDOT requirements.

NorthStar conducts or makes available training programs to comply with the appropriate aspects of the following regulations:

- USEPA's Resource Conservation and Recovery Act (RCRA)
- United States Department of Transportation (USDOT) Hazardous Material Transportation Act (HMTA) HM 181/126 F
- OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER), 29 CFR1910.120

The USEPA and State of Florida hazardous waste regulations state that employees who handle hazardous waste must be familiar with proper waste handling and emergency procedures (including contingency plan implementation) relevant to their responsibilities. As part of the NorthStar Hazardous Waste Management Plan, individuals involved with handling hazardous waste will receive appropriate training to ensure compliance with RCRA requirements.

Personnel must successfully complete the training program within six months after the date of their employment or assignment to a facility, or to a new position at a facility, whichever is later. Employees who have not received this training must not work in unsupervised positions until they have completed the training requirements of this section.

Training Records

Training records are retained for a minimum of three (3) years after an employee leaves the position. (40 CFR 265.16(e)) These records include:

- The job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job.
- A written job description for each job title. This description must include the requisite skill, education, and/or other qualifications, and the duties of the personnel assigned to each position.
- A written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
- Records that document that the training or job experience has been given to and completed by the facility personnel.

Confidential and Proprietary Information
Competition Sensitive – Not for Distribution

US Department of Transportation

The US Department of Transportation requires that any individual offering hazardous materials for shipment must receive instructions to permit them to comply with USDOT regulations. USDOT's training requirements (49 CFR 172, Subpart 4) apply to individuals involved with hazardous materials transportation processes, as defined by the USDOT. (The definition includes hazardous waste.) This training is required for those individuals responsible for pre-transportation packaging, loading, transporting, unloading, paperwork completion, etc. of hazardous waste and hazardous materials.

NorthStar has identified those involved with transportation of hazardous materials and has trained each in their specific job function. For hazardous waste management at NorthStar, any individual who packages waste for disposal (from the CAA), selects containers or prepares a manifest will receive USDOT Training.

USDOT also requires that certain shippers/carriers of hazardous materials develop security plans that address the security measures to be taken when storing hazardous waste prior to shipment.

USEPA Regulations Overlap

USEPA's RCRA defines hazardous waste transporter as any person engaged in the off-site movement of hazardous waste by air, railway, highway, or water (40 CFR 260.10). Therefore, hazardous waste transporters must follow both USEPA and USDOT regulations. While USEPA regulations focus on hazardous waste and the manifest system, USDOT regulations and training govern how hazardous materials are packaged, marked, and labeled in the transportation process and emergency response procedures during transportation.

OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER)

HAZWOPER (29 CFR 1910.120) training is required for employees who work at uncontrolled hazardous waste sites, who work at TSDRF's, or who provide emergency response for releases of hazardous substances. HAZWOPER training is required for NorthStar hazardous waste personnel.

HAZWOPER training will include elements of an emergency response plan, standard operating procedures for the site/job, personal protective equipment, and procedures for handling emergency incidents. Initial training requires 40 hours; refresher training is 8 hours.

Recordkeeping and Reporting

Hazardous waste generators are required to create, provide, and maintain records that track waste from generation to ultimate disposal. The purpose of obtaining, maintaining, and preserving these documents is to ensure that waste is properly managed and regulatory

compliance requirements are met. The information and documentation are also useful in determining and potentially avoiding liability if the waste becomes involved in Superfund action through the transporter or disposal facility. Contrary to minimum regulatory requirements, maintaining the required record keeping and documentation permanently is a prudent management practice.

USEPA specifies record keeping requirements. Their requirements include:

- USEPA requires generators of hazardous waste to comply with the record keeping and reporting requirements set forth in 40 CFR 262.40 and 268.7(a)(8).

- Additionally, 40 CFR 265.174 require that CAAs be inspected weekly. The generator must be able to demonstrate to the USEPA or State of Florida that they have inspected and maintained these areas in compliance with RCRA regulations by documenting their inspection activities.
- Each waste stream must be evaluated to determine if it is a hazardous waste as defined by 40 CFR 261 and to determine the proper waste code. This can be done by either testing the waste according to the methods set forth in 40 CFR 261 or by applying generator knowledge of the hazardous nature or characteristics of the waste based on the materials and process(s) used to generate the waste. The waste code is determined by understanding how the waste is generated. A waste analysis form or waste profile (developed by the disposal facility) is used to document the hazardous waste determination.

Emergency Preparedness and Response/Contingency Plan

Risks associated with the handling of hazardous chemicals include spills, leaks, releases, etc. and are referred to as events. The Hazardous Waste Management Plan is designed to institute methods to prevent hazardous material events. This section outlines the steps to take to ensure that events are effectively and expeditiously managed and risks are controlled.

In case of a catastrophic emergency or the need to evacuate, the Fire/Police dispatch must be called. They can be reached by dialing 911. The Emergency Coordinator is responsible for the following:

- Always Being on the premises or on call (or designee)
- Being available to respond to an emergency by reaching the site of generation or accumulation within a short period of time
- Developing or coordinating the emergency response plans, site operations and activities
- Being familiar with location and characteristics of waste handled, location of records, and layout of waste generation sites

- Having the authority to commit resources to hazardous waste cleanup and response.
- NorthStar will provide the following equipment to control emergencies at or near the CAA
- A device, such as a telephone (immediately available) or a cellular telephone, capable of summoning emergency assistance from the police departments, fire departments, or state or local emergency response teams
- Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment
- Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems

Non-Hazardous Waste

Non-hazardous waste is a category of widely generated waste. While these wastes don't display characteristics or properties to deem them hazardous, they do often require special handling and disposal. Because of the low risks and widespread use associated with non- hazardous waste, the regulations pertaining to non-hazardous waste management are much less stringent than those for hazardous wastes.

Non-hazardous waste is regulated by the Environmental Protection Agency under 40 CFR 239-259 (Standards for Waste Management). Non-hazardous wastes will be removed from the site under the supervision and oversight of NorthStar by and approved Owner Landfill.

Non-hazardous Waste Handlers

- Read and understand the Non-hazardous Waste Management Plan.
- Take the Non-hazardous Waste Management Training.
- Properly label, store, use, and dispose of Non-hazardous Waste as described in the Non-hazardous Waste Management Training.

Non-hazardous Waste Coordinator

- Maintain appropriate and current hazardous waste certifications.
- Maintain applicable and relevant Non-hazardous Waste Management Training content.
- Review laws and regulations for changes impacting Non-hazardous Waste.
- Ensure proper reporting to the Environmental Protection Agency.

Non-hazardous Waste Accumulation Sites

Non-hazardous waste will be collected and stored in the Central Accumulation Area as discussed in the Hazardous Waste Management Plan.

Accumulation Time Limits

Non-hazardous waste can be accumulated for up to one year from the date the non-hazardous waste became a waste. The amount of time that a non-hazardous waste has been accumulated must be demonstrated, in one of the following ways:

- Direct marking of the non-hazardous waste with the date that it became a waste
- Marking the container with the earliest date that waste began accumulating in that container
- Marking a designated accumulation area with the earliest date that waste began accumulating in that area
- Keeping an inventory that identifies the date that each non-hazardous waste became waste
- Keeping an inventory that identifies the earliest date that a non-hazardous waste became waste in a designated accumulation area

Non-hazardous waste may be accumulated for longer than a year from the date that the non-hazardous waste became a waste provided the sole purpose of accumulation of such quantities is necessary to facilitate proper recovery, treatment, or disposal. If this is the case, the handler must provide proof, through a letter or contract, from a destination disposal facility confirming that accumulation beyond a year is necessary. Non-hazardous Waste Management Requirements

As with other hazardous waste, proper storage and handling of non-hazardous waste is critical to ensuring personnel safety and compliance with appropriate regulations. General management requirements for all types of non-hazardous wastes are as follows:

- Handlers will not dispose of non-hazardous wastes
- Handlers will not dilute or treat non-hazardous waste, except when responding to releases
- Non-hazardous waste will be managed in a way that prevents the release of any component of the non-hazardous waste
- If containment of a non-hazardous waste is required, the container will be (a) always closed except when adding or removing waste (b) compatible with the non-hazardous waste and its contents, and (c) free of defects, design characteristics or damage that would lead to leakage, spillage or other environmental releases
- Non-hazardous waste stored outside must be covered, to prevent precipitation from encountering the waste

Inspections

There are no inspection requirements for large quantity handlers of non-hazardous waste.

Off-Site Shipment/Transportation

Non-hazardous waste may only be sent to another non-hazardous waste handler or a Transfer, Storage, Disposal, or Recycling Facility (TSDRF). Prior to shipping non-hazardous waste offsite, the generator of the waste must obtain approval from the destination facility. If a non-hazardous waste meets the definition of hazardous material under US Department of Transportation regulations, the handler must comply with the DOT requirements set forth in 49 CFR 172-180.

Non-hazardous waste may be self-transported to another handler or TSDRF. If NorthStar decides to self-transport non-hazardous waste, NorthStar will comply with all appropriate USEPA and DOT requirements.

Record Keeping and Tracking

The handler must keep a record of each shipment. The record can be in the form of a log sheet, an invoice, a manifest, a bill of lading, or another type of shipping document. The record must include the following information:

- Spill control equipment
- The name and address of the non-hazardous waste handler
- Destination facilityQuantity of each type of non-hazardous waste
- Date of shipment.

Employee Training

A large quantity waste handler must ensure that all employees who manage or handle non-hazardous waste are thoroughly familiar with waste handling methods and emergency procedures applicable to the waste they are handling, relative to their responsibilities. Additionally, employees who handle or manage non-hazardous waste pesticides must be trained in accordance with the requirements of 40 CFR 265.16 (Hazardous Waste training requirements)

Universal Waste Management

Hazardous waste that can be handled as universal waste includes batteries, pesticides, mercury containing devices, lamps, cathode ray tubes, and antifreeze. Universal waste will be removed from the site under the supervision and oversight by NorthStar and will be disposed of by an Owner approved facility.

Batteries

There are many types of batteries with various chemical compositions. They can be of varying shapes, sizes, and styles: cylindrical, rectangular, flat cells, button cells, lantern, nine volt, and

battery packs are all common. The battery chemistry is what determines its regulatory status. Batteries regulated as universal waste have one of the following chemistries: lead acid, nickel cadmium, silver, mercury, or lithium.

Alkaline, zinc carbon, zinc chloride, and lithium-ion batteries are not universal waste and can be disposed through recycling or via the solid municipal waste stream.

Pesticides

Pesticides can be managed as universal waste if one of the following conditions is met:
The pesticide is a recalled pesticide that has been suspended or cancelled and is either part of the voluntary or mandatory recall under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) or is not in compliance with FIFRA; or

Mercury Containing Devices

Thermostats, thermometers, manometers, barometers, sphygmotonometers, relays, and switches are all devices that can contain mercury. These devices can be managed under the universal waste rule provided they are intact.

Lamps

A lamp, or the bulb or tube portion in an electrical lighting device, contains a small amount of mercury. Small amounts of cadmium can also be present in some types of lamps. For these reasons, they must be managed as universal waste.

As with batteries, there are several shapes, sizes, and styles of lamps available. Small compact, U-tubes, circline, four foot straight, eight foot straight, and standard light bulb shapes are all very common. Lamps regulated as universal waste can be fluorescent, high intensity discharge, neon, mercury vapor, high pressure sodium, and metal halide lamps.

Cathode Ray Tubes (CRTs)

Cathode ray tubes (CRTs) are the video display portion of a computer monitor or television set. CRTs contain a significant amount of lead. For example, a 27-inch CRT-type television contains about 8 pounds of lead. The presence of lead requires that CRTs be managed as universal waste.

Waste Antifreeze

Ethylene glycol and propylene glycol are the common constituents of antifreeze. Neither of these is regulated as hazardous waste if not used in an automotive application. During automotive use, antifreeze chemically breaks down and becomes acidic, corroding the engine's cooling system.

This corrosion causes the antifreeze to become contaminated with lead particles. Additionally, the antifreeze may become contaminated with gasoline, which contains benzene. Waste antifreeze may be managed as a universal waste in accordance with above.

Universal Waste Handler Status

The first step in management of universal waste is to determine the handler classification. Handler classification is based on the total amount of all the universal waste that is accumulated. The three classifications for handling universal waste are small quantity handler, large quantity handler, and very large quantity handler.

1. A small quantity handler accumulates less than 5,000 kilograms (11,000 pounds) of universal waste on site at any time
2. A large quantity handler accumulates more than 5,000 kilograms (11,000 pounds) but less than 20,000 kilograms (44,000 pounds) of universal waste on site at any time
3. A very large quantity handler accumulates 20,000 kilograms (44,000 pounds) or more of universal waste on site at any time

Universal Waste Accumulation Sites

Universal waste will be collected and stored in the Central Accumulation Area as discussed in the Hazardous Waste Management Plan.

Accumulation Time Limits

Universal waste can be accumulated for up to one year from the date the universal waste became a waste. The amount of time that a universal waste has been accumulated must be demonstrated, in one of the following ways:

1. Direct marking of the universal waste with the date that the universal waste became a waste
2. Marking the container the waste is at the earliest date that waste began accumulating in that container
3. Marking a designated accumulation area with the earliest date that waste began accumulating in that area
4. Keeping an inventory that identifies the date that each universal waste became waste
5. Keeping an inventory that identifies the earliest date that a universal waste became waste in a designated accumulation area

Universal waste may be accumulated for longer than a year from the date that the universal waste became a waste provided the sole purpose of accumulation of such quantities is necessary to facilitate proper recovery, treatment, or disposal. If this is the case, the handler must provide

proof, through a letter or contract, from a destination disposal facility confirming that accumulation beyond a year is necessary.

General Requirements for All Universal Waste Types

As with other hazardous waste, proper storage and handling of universal waste is critical to ensuring personnel safety and compliance with appropriate regulations. General management requirements for all types of universal waste are as follows:

1. Handlers will not dispose of universal waste
2. Handlers will not dilute or treat universal waste, except when responding to releases
3. Universal waste will be managed in a way that prevents the release of any component of the universal waste

4. If containment of universal waste is required, the container will be (a) always closed except when adding or removing waste (b) compatible with the universal waste and its contents, and (c) free of defects, design characteristics or damage that would lead to leakage, spillage or other environmental releases
5. Universal waste stored outside must be covered, to prevent precipitation from encountering the waste
6. An EPA identification number is required for large quantity handlers of universal waste

Requirements for Batteries

A battery becomes universal waste on the date that it is removed from service, either because it is no longer operable or because it is no longer wanted or needed.

The following management activities are allowed provided the individual battery cases are not breached, are intact, are closed except to remove electrolyte, and are immediately closed after electrolyte is removed:

- Battery sorting
- Mixing battery types in one container
- Removing the electric charge by discharging
- Regenerating used batteries
- Disassembling battery packs into individual batteries or cells
- Removing batteries from consumer products
- Removing electrolytes from batteries

NOTE: Each battery or container of batteries must be labeled with one of the following: Universal Waste — Battery, Waste Batteries, or Used Batteries.

Requirements for Mercury-Containing Devices

Any used or unused mercury-containing device becomes a waste on the date that it is no longer operable or on the date that the handler decides to discard it. To manage a mercury-containing device as universal waste, the following requirements must be met:

1. Mercury containing devices that show any sign of leaking, spilling, or damage that could cause spillage must be stored in a container that is closed, compatible with the waste, and free of defects that could cause leakage.
2. Ampoules containing mercury may be removed from a mercury containing device if:
    - The ampoule is removed such that breakage does not occur
    - The ampoule is only removed over a containment device
    - A mercury clean-up system is readily available
    - Any spilled mercury from a broken ampoule is immediately transferred to containment
    - The area where the ampoule is removed is well ventilated and monitored to ensure compliance with applicable OSHA exposure levels for mercury
    - Employees removing ampoules are familiar with proper waste mercury handling and emergency procedures, including transfer of mercury from containment devices to the appropriate container
3. Empty ampoules are collected and stored in appropriate containers. If any waste is generated from a mercury-containing device breakage or emptying of ampoules (i.e., ampoules themselves, spill clean-up debris), the waste handler must determine if it exhibits the characteristic of hazardous waste for mercury. If waste does meet the characteristic, it must be managed as a hazardous waste

NOTE: Mercury containing devices or mercury device storage areas must be labeled with one of the following: Universal Waste - Mercury Containing Device(s), Waste Mercury-Containing Device(s), or Used Mercury-Containing Device(s).

Requirements for Lamps

A lamp becomes a waste on the day that it is removed from service, either because it is burned out or is no longer wanted or needed. Lamps may not be intentionally crushed or dismantled. If the lamps are unintentionally broken, the broken lamp and residue must be cleaned up and the area decontaminated. The broken lamps and clean-up debris may be managed as universal waste.

NOTE: Lamps or lamp accumulation areas must be marked with the date the lamp is removed from service or the date the first lamp was placed in the storage accumulation area and one of the following: Universal Waste — Lamp(s), Waste Lamp(s), or Used Lamp(s).

Requirements for Cathode Ray Tubes (CRTs)

A cathode ray tube becomes a waste on the day that it is determined to be non-repairable or unusable for its original purpose. Any CRT that shows signs of breakage, spillage, or damage must be contained as prescribed in previous sections of this document. Handlers of CRTs may not intentionally break or shred a cathode ray tube unless the following are met:

- The handler installs and maintains a system designed to minimize release via wind dispersal, runoff, and direct releases
- Breaking, shredding, and storage practices do not pose a hazard to human health or the environment
- The handler prevents exposure of humans or the environment to harmful quantities of lead or other hazardous constituents
- Shredded and broken cathode ray tubes are stored in containers that meet the requirements of this document
- Before transporting or offering shredded CRTs for transport, the handler packages the CRTs in containers that are impermeable, closed, and designed to prevent a release to the environment. Any spill clean-up debris, or other residual waste generated from the breaking or shredding of CRTs that exhibit a characteristic of hazardous waste, must be managed as a hazardous waste

NOTE: A Cathode Ray Tube or CRT accumulation area must be marked with one of the following: Universal Waste — Cathode Ray Tube(s), Waste Cathode Ray Tube(s), or Used Cathode Ray Tube(s).

Requirements for Used Antifreeze

Used antifreeze becomes a waste on the date that the antifreeze becomes unsuitable for its original purpose due to the presence of physical or chemical impurities or loss of original properties, or on the date that the handler decides to discard it. Used antifreeze must be stored in containers that meet the requirements of this document.

NOTE: Used antifreeze containers must be marked with one of the following: Universal Waste — Antifreeze, Waste Antifreeze, or Used Antifreeze.

Requirements for Pesticides

A recalled pesticide will become waste on (a) the date that the manufacturer of the recalled pesticide agrees to participate in the recall and the person conducting the recall decides to discard the pesticide, or (b) when the handler decides to discard the unused pesticide.

Universal waste pesticides must be containerized in a container compatible with the waste, or overpacked in a waste container that is compatible. These pesticides must be labeled with the original label that accompanied the pesticide at the time of sale or distribution and the words Universal Waste-Pesticide(s) or Waste- Pesticide(s). Universal waste pesticide handlers must comply with the storage requirements for universal waste pesticides as follows:

1. Universal waste pesticides must be stored on an impervious surface. An impervious surface may be concrete or asphalt (without cracks or holes). Earth, wood, and gravel surfaces are not considered impervious surfaces.
2. Waste pesticides that contain free liquid may not be stored in an area with functional floor drains or manholes unless secondary containment is present. If secondary containment is necessary, it must be sufficient to contain a spill from the largest container in the secondary containment. Containment is not required in areas with functional floor drains or manholes provided.
3. The waste pesticide contains no free liquid, and the area is sloped or drained to remove precipitated liquid, or containers are elevated or otherwise protected from accumulated precipitation.
4. The following security measures must be provided at all outdoor storage areas for universal waste pesticide:
    a. An artificial or natural barrier that surrounds the universal waste pesticide storage area to prevent unauthorized entry by people or livestock
    b. An entry that is always controlled
    c. A sign at all entries to the storage area with the legend, "Danger — Unauthorized Personnel Keep Out," or other words indicating that only authorized personnel are allowed entry, and that the area is dangerous

Inspections

There are no inspection requirements for large quantity handlers of universal waste.

Off-Site Shipment/Transportation

Universal waste may only be sent to another universal waste handler or a Transfer, Storage, Disposal, or Recycling Facility (TSDRF). Prior to shipping universal waste offsite, the generator of the waste must obtain approval from the destination facility. If universal waste meets the definition of a hazardous material under US Department of Transportation regulations, the handler must comply with the DOT requirements set forth in 49 CFR 172-180.

Universal waste may be self-transported to another handler or TSDRF. If NorthStar decides to self-transport universal waste, NorthStar will comply with all appropriate FL, USEPA, and DOT requirements.

Record Keeping and Tracking

The handler must keep a record of each shipment. The record can be in the form of a log sheet, an invoice, a manifest, a bill of lading, or another type of shipping document. The record must include the following information:

- Spill control equipment
- The name and address of the universal waste handler
- Destination facility
- Quantity of each type of universal waste
- Date of shipment

Employee Training

A large quantity waste handler must ensure that all employees who manage or handle universal waste are thoroughly familiar with waste handling methods and emergency procedures applicable to the waste they are handling, relative to their responsibilities. Additionally, employees who handle or manage universal waste pesticides must be trained in accordance with the requirements of 40 CFR 265.16 (Hazardous Waste training requirements).

End of Waste Disposal Plan

1. GENERAL INTRODUCTION

A. Project Overview

NorthStar Contracting Group, Inc. will perform hazardous materials abatement and remediation at the former Baptist Hospital complex in Pensacola, Florida. This project encompasses the safe removal of asbestos-containing materials (ACM), lead-containing materials, universal wastes, and other hazardous materials from multiple structures prior to demolition activities.

Project Scope The abatement work spans multiple interconnected buildings within the hospital complex:

- Main Hospital Building (432,700 SF) - Original 1943 structure with multiple additions
- Tower One (64,000 SF) - 1974 five-story medical tower
- Tower Two (64,000 SF) - 1977 five-story medical facility
- Tower Three (112,200 SF) - Five-story medical office building
- Connector Section (3,500 SF) - 1976 single-story connecting corridor
- Service Wing (18,400 SF) - 1985-1990 support facilities.

Work Execution The abatement work will proceed in three distinct phases:

1. Phase 1: Abatement of connector section and single-story areas
2. Phase 2: Complete remediation of tower structures
3. Phase 3: Systematic abatement of main hospital facility

Project Oversight The project will be executed under the supervision of experienced NorthStar supervisors who will ensure compliance with all applicable regulations and safety protocols. Continuous air monitoring will be maintained throughout the project, with a Florida Licensed Consultant providing guidance and direction as needed. Industrial hygienists will be consulted for additional testing and evaluation when specific conditions or materials require further assessment.

This work plan details the comprehensive methodologies, safety protocols, and regulatory compliance measures that will be implemented to ensure successful project completion. The project emphasizes maintaining the highest standards of safety and regulatory compliance while efficiently preparing the structures for subsequent demolition activities.

B. Abatement Remediation Scope Overview

NorthStar Contracting Group, Inc. will perform comprehensive hazardous materials abatement and remediation throughout the former Baptist Hospital complex. The scope encompasses the following primary activities:

Asbestos Abatement

- Removal of all identified asbestos-containing materials including thermal system insulation, fireproofing, floor tiles, mastics, drywall systems, and other ACM identified through comprehensive surveys.
- Implementation of proper engineering controls and containment systems
- Air monitoring and clearance testing in accordance with regulatory requirements

Lead-Based Materials

- Removal and proper disposal of lead-containing materials
- Implementation of appropriate worker protection measures
- Proper segregation and disposal of lead-contaminated materials

Universal Waste Removal

- Collection and proper disposal of fluorescent light tubes
- Removal of ballasts and electrical transformers
- Proper handling and disposal of mercury-containing devices
- Removal and disposal of batteries and electronic waste

Additional Hazardous Materials

- Removal and disposal of chemicals from former laboratory areas
- Proper handling and disposal of medical waste if encountered.
- Removal of any identified PCB-containing materials
- Collection and disposal of refrigerants from HVAC systems

Work Area Preparation

- Installation of critical barriers and decontamination facilities
- Establishment of negative air pressure containment systems
- Implementation of appropriate security measures
- Protection of surfaces and systems to remain.

The work will be executed in three sequential phases across the facility's various structures, with each phase requiring regulatory notification and independent clearance verification before proceeding to subsequent phases. All work will be performed in accordance with federal, state, and local regulations governing hazardous materials abatement.

C. Contractor Information

(1) Contractors

ABATEMENT CONTRACTOR

NorthStar Contracting Group, Inc
Local Office: 76 East 9 Mile Rd, Pensacola FL 32534
Phone: (850) 474-4077 Fax: (850) 474-4029

Primary Office: 9135 Avenue C, Orlando, FL 32824
Phone: (407) 855-2365 Fax: (407) 855-2356

Florida Asbestos Contractor License # ZA514
Florida General Contractor License # CGC060872

D. Regulatory Compliance Statement

The NorthStar Team recognizes the importance of maintaining regulatory compliance throughout this project and is committed to this goal. We will work cooperatively and in conjunction with Owner's Staff and develop good working relationships with the regulatory agencies. Our local staff has a clear understanding of compliance issues and will work with County and State of Florida regulatory agencies as required with all intentions of maintaining the current City of Pensacola's relationship.

2. BACKGROUND

A. Facility Description

The former Baptist Hospital complex stands as a testament to seven decades of healthcare evolution in Pensacola. Originally constructed in 1943, the facility grew through multiple expansions and renovations to encompass approximately 695,000 square feet of specialized medical space across several interconnected buildings.

The main hospital building, spanning 432,700 square feet, forms the core of the complex. This structure evolved from its 1943 origins through multiple additions, creating a varied configuration that ranges from single-story sections to five-floor wings. Though now vacant, the building retains its institutional character with empty patient rooms, operating suites, intensive care units, and emergency department areas, all still bearing their specialized medical gas systems and healthcare-specific infrastructure.

Two similarly sized medical towers, each encompassing 64,000 square feet, were added in the 1970s. Tower One, constructed in 1974, and Tower Two, built in 1977, housed additional patient care areas along with support services. Tower Two notably contained the hospital's pharmacy and gift shops. These towers connect to the main facility through a strategic corridor system, with Tower Two specifically accessed via a 3,500-square-foot connector section built in 1976. This single-story connector formerly housed medical meeting rooms, kitchen facilities, offices, and social services areas.

Tower Three, the largest of the towers at 112,200 square feet, served as a medical office building. This five-story structure contained physician offices, specialized imaging facilities including X-ray and CT scan rooms, and ground-floor amenities such as a Subway restaurant and facilities offices. The building retains its specialized infrastructure designed to support heavy medical imaging equipment.

Completing the complex is an 18,400-square-foot service wing, added between 1985 and 1990. This single-story structure housed essential support services including the boiler room, maintenance facilities, morgue, laundry operations, housekeeping, and carpenter shop. Its industrial-grade infrastructure and utility systems reflect the building's crucial role in maintaining hospital operations.

Throughout the complex, wide corridors, institutional-grade finishes, and extensive utility infrastructure remain in place, though all operational equipment has been removed. These remaining elements provide clear evidence of the building's long history of healthcare service while presenting unique considerations for the upcoming abatement project.

B. Building History

The Baptist Hospital complex on West Moreno Street in Pensacola represents over 70 years of healthcare evolution through multiple expansions and additions. The original structure, constructed in 1949, was a five-story T-shaped building with a 15,200-square-foot footprint, providing 76,000 square feet of medical space.

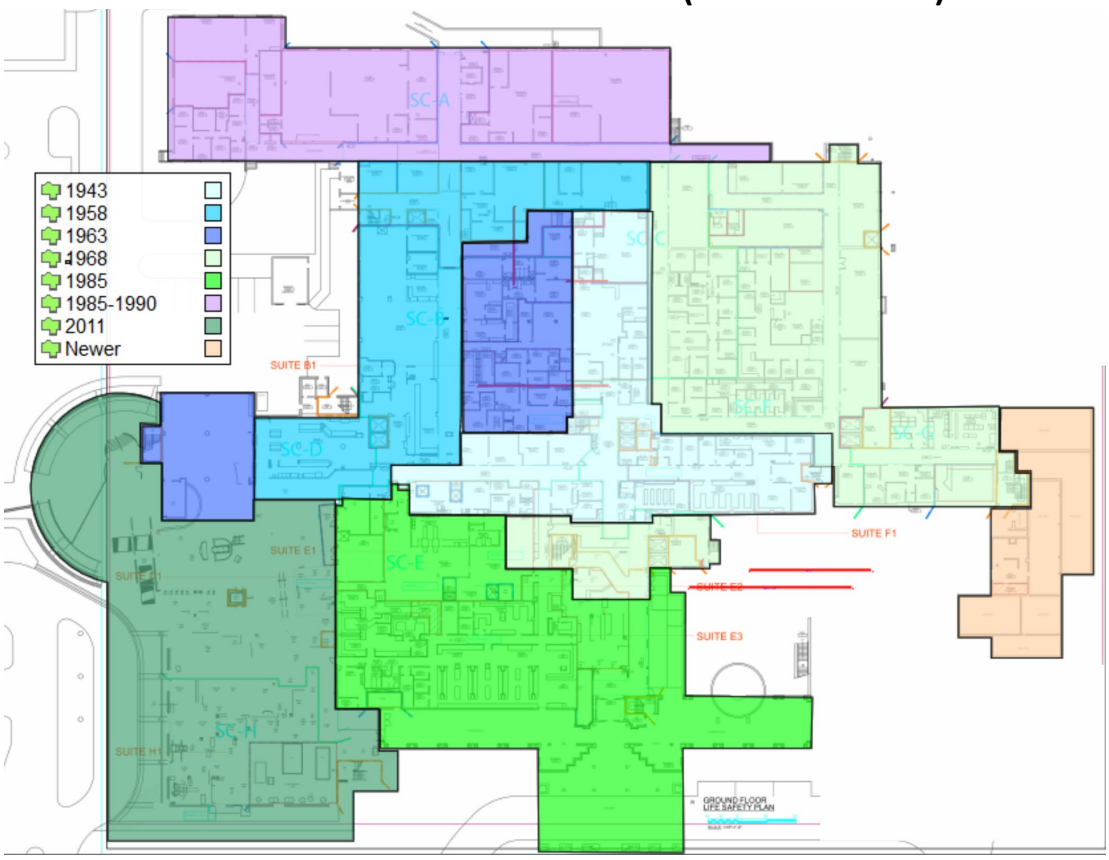
The facility underwent its first major expansion in 1958, adding a reversed Z-plan wing to the west side. This addition provided an additional 77,500 square feet across five floors, bringing the total facility size to 153,500 square feet. In 1963, single-story additions filled the courtyard space between the 1949 and 1958 structures while also extending westward, adding 11,000 square feet of ground-floor space.

A significant expansion occurred in 1968, with a five-story addition to the east side of the original building. This construction added 138,500 square feet, completing the eastern wing and bringing the total facility size to 303,000 square feet. The 1970s marked the beginning of the tower expansions, with Tower One constructed in 1974 as a five-story, 65,500-square-foot medical office and imaging facility. A 3,500-square-foot connector section was added in 1976, followed by Tower Two in 1977, which mirrored Tower One's design and added 77,200 square feet.

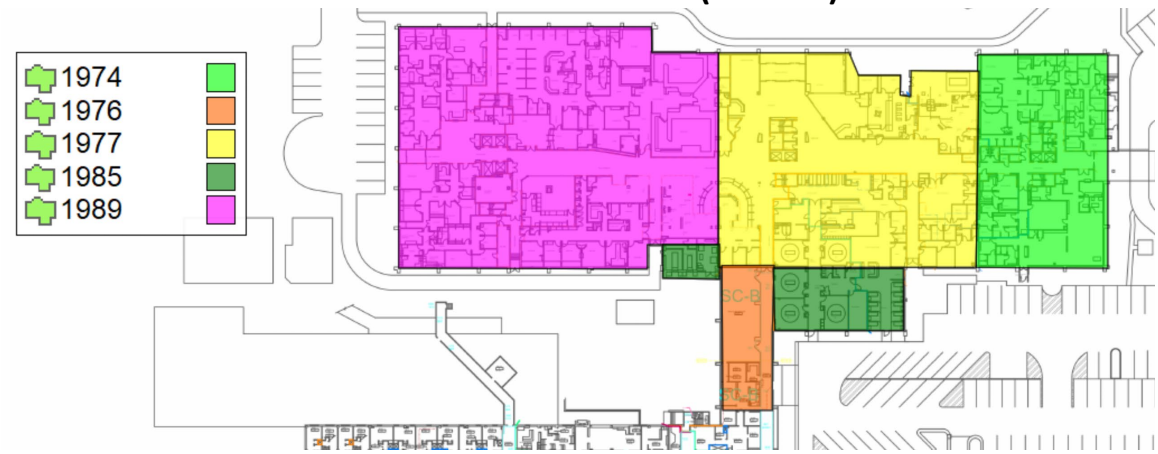
The 1980s brought further expansion with multiple projects. In 1985, additions to the connector section and support services were constructed, including laundry facilities, carpenter shop, boiler room, morgue, and housekeeping areas. These additions contributed 76,500 square feet to the complex. The final major addition came in 1989 with the construction of another medical office tower west of Tower Two, adding 80,400 square feet.

After 1989, the facility underwent various interior renovations to modernize spaces and accommodate changing healthcare needs. The hospital continued operations at this location until late 2023, when services were relocated to a new facility on Brent Lane near I-110. The complex has remained vacant since this relocation, encompassing approximately 606,100 square feet of total space across its various structures and additions.

MAIN HOSPITAL CONSTRUCTION (GROUND LEVEL)



TOWER CONSTRUCTION (LEVEL 1)



C. Previous Surveys and Assessments

The Baptist Hospital complex has undergone several comprehensive environmental assessments to identify and document hazardous materials throughout the facility. Initial investigation began with Professional Service Industries (PSI) conducting a detailed facility-wide

survey in 2023, which established the first comprehensive mapping and quantification of asbestos-containing materials and other hazardous materials throughout the complex.

This initial assessment was supplemented by Occupational Health Consultants (OHC) in 2024, who conducted additional sampling focusing on previously unexamined areas and materials. Their work expanded the scope of identified materials and provided updated quantities and locations of hazardous materials, including several areas of presumed asbestos-containing materials requiring further verification.

In 2025, PSI performed additional targeted testing to address specific areas of concern. This phase included strategic sampling of joint compounds across various construction periods and investigation of vapor barriers through selective slab penetrations. This testing provided crucial verification of previously presumed materials and refined the project's scope.

During the initial project planning phase, NorthStar conducted two detailed site investigations. The first mandatory site walks on February 4th, 2025, allowed for preliminary scope development and initial strategy formation. A second, more focused investigation on February 11th, 2025, included PSI personnel conducting additional sampling and verification testing of specific materials and areas of concern.

The collective findings from these multiple assessments form the foundation for this work plan's scope and methodology. As the project progresses, NorthStar will maintain the capability for additional testing and verification when suspect materials are encountered during abatement activities.

3. REGULATORY COMPLIANCE

A. Federal Requirements

The abatement and removal of hazardous materials at the Baptist Hospital complex will be conducted under comprehensive federal regulatory oversight. The Environmental Protection Agency's National Emission Standards for Hazardous Air Pollutants (NESHAP) 40 CFR Part 61, Subpart M establishes the fundamental requirements for asbestos abatement activities, including specific notification procedures, stringent work practice standards, and detailed waste handling protocols.

Worker safety and health requirements are governed by multiple Occupational Safety and Health Administration (OSHA) standards. The Asbestos Standard for Construction Industry (29 CFR 1926.1101) mandates specific worker protection measures, including training requirements, exposure monitoring, medical surveillance programs, and engineering controls. Similarly, the Lead in Construction Standard (29 CFR 1926.62) outlines the necessary protective measures for lead-related activities, incorporating exposure limits, training protocols, and medical monitoring requirements. OSHA's Respiratory Protection Standard (29 CFR 1910.134) provides detailed requirements for respirator programs, including proper selection, medical evaluation, fit testing, and maintenance procedures.

The transportation of hazardous materials from the site falls under Department of Transportation regulations (49 CFR Parts 171-180), which specify proper packaging, labeling, marking, and documentation requirements. These regulations ensure safe transport of hazardous materials and establish protocols for emergency response.

Waste management activities will comply with the Resource Conservation and Recovery Act (RCRA) regulations (40 CFR Parts 260-273), which govern the identification, storage, transportation, and disposal of hazardous waste materials. These requirements establish the framework for proper waste handling from generation through final disposal.

All project activities will be performed by properly trained and certified personnel in accordance with these regulations, with comprehensive documentation maintained throughout the project duration to demonstrate full regulatory compliance.

B. State Requirements

The abatement activities at the Baptist Hospital complex will strictly adhere to Florida's extensive regulatory framework governing hazardous materials removal and disposal. The primary regulatory oversight is administered through multiple state agencies and regulations.

Florida Department of Environmental Protection (FDEP) The FDEP's asbestos program, governed by Chapter 62-257 F.A.C., establishes comprehensive requirements including:

- Submission of a Notice of Demolition or Asbestos Renovation form at least 10 working days prior to beginning work
- Specific work practice standards for removal and handling of regulated materials
- Detailed requirements for containment construction and maintenance
- Air monitoring protocols specific to Florida climate conditions
- Special provisions for hurricane and severe weather preparedness
- Documentation requirements for waste shipment records
- Project notification and revision procedures
- Final visual inspection and clearance requirements

Licensing and Certification Requirements Florida Statutes Chapter 469 mandates specific licensing for asbestos professionals:

- All supervisors must maintain current Florida Asbestos Supervisor Training
- Workers must possess valid Florida Asbestos Worker Training
- Project monitoring and consulting activities must be performed under Florida Licensed Asbestos Consultants
- Training must be conducted through state-approved providers.
- Annual training renewals and continuing education requirements
- Documentation of current training of asbestos workers and supervisors must be on site.

Waste Management Requirements F.A.C. Chapter 62-730 establishes detailed protocols for hazardous waste management:

- Specific requirements for waste containerization and labeling
- Storage area specifications and management
- Transportation requirements within Florida boundaries
- Detailed manifest and tracking documentation.
- Requirements for disposal at Florida-licensed facilities
- Special handling requirements for various waste streams
- Emergency response procedures
- Spill prevention and control measures

Laboratory and Analytical Requirements

- Analysis must be performed by laboratories maintaining NVLAP accreditation.
- Florida Department of Health laboratory certification requirements
- Chain of custody documentation requirements
- Specific analytical methods approved by the state.
- Reporting requirements and timeframes
- Quality control and quality assurance protocols

Special Considerations for Florida Conditions

- Enhanced containment requirements for high-humidity environments
- Additional ventilation requirements due to heat conditions
- Storm water management and discharge requirements
- Special procedures for working during Florida's rainy season.
- Hurricane preparedness and response procedures
- Heat stress monitoring and prevention programs

Record Keeping and Documentation

- Maintenance of all certifications on-site
- Daily work logs specific to Florida requirements.
- Air monitoring data and laboratory results
- Waste shipping documentation
- Training records and medical surveillance documentation
- Project photographs and video documentation
- Incident reporting and correction documentation
- Equipment maintenance and inspection records

All project activities will be coordinated with FDEP's Northwest District Office in Pensacola to ensure proper communication and compliance with local interpretations of state requirements. Regular updates will be provided to state authorities as required by Florida regulations.

C. Local Requirements

All abatement activities at the Baptist Hospital complex will comply with specific requirements established by both the City of Pensacola and Escambia County authorities.

City of Pensacola Requirements

- Building Department permits for any structural modifications required during abatement.
- Compliance with city noise ordinances limiting work hours to 7:00 AM - 6:00 PM Monday through Saturday
- Special transportation routes designated for waste hauling vehicles.
- Site security requirements including perimeter fencing and signage.
- Dust control measures specific to urban area requirements
- Traffic control plans for equipment and waste transport vehicles
- Storm water management compliance during abatement activities
- Site cleanliness requirements and debris management

Escambia County Health Department Requirements

- Compliance with county air quality regulations
- Local emergency response coordination
- County-specific waste handling requirements
- Verification of proper licenses and certifications
- Site inspection protocols specific to county requirements
- Documentation of daily activities as required by county.
- Final clearance inspection requirements

Utility Requirements

- Coordination with local utility providers for service disconnections
- Compliance with Emerald Coast Utilities Authority requirements
- Special requirements for sewer and water line protection
- Verification of utility clearances before beginning work
- Documentation of utility locations and protection measures

Local Emergency Services Coordination

- Notification to Pensacola Fire Department of abatement activities
- Emergency response protocols coordinated with local authorities.
- Site access requirements for emergency personnel
- Maintenance of emergency contact information
- Regular communication with local first responders

All work will maintain compliance with these local requirements while coordinating closely with city and county authorities throughout the project duration.

D. Permits and Notifications

State of Florida Requirements

- FDEP Notice of Demolition or Asbestos Renovation form submitted at least 10 working days prior to project start.
- Original notifications maintained on-site with copies provided to owner's representative.
- Notification revisions submitted for any significant changes to:
  - Project scope or quantities
  - Work schedule modifications
  - Emergency changes to work plan.
  - Changes in contractor information
- Waste shipment records and manifests as required by FDEP.
- Project completion notifications and final documentation

City of Pensacola Requirements

- Building Department demolition preparation permits
- Right-of-way permits for equipment staging and dumpster placement.
- Site security permits and fencing requirements.
- Water usage permits for dust control activities.
- Noise ordinance compliance permits for work hours.
- Storm water management compliance documentation

Utility Coordination

- Emerald Coast Utilities Authority disconnection verification
- Gulf Power electrical service coordination
- Gas service termination documentation
- Telecommunications service disconnection verification
- Documentation of all utility clearances
- Emergency utility contact information

Emergency Services Coordination

- Written notification to Pensacola Fire Department
- Documentation of emergency response protocols
- Site access maps provided to emergency services.
- Emergency contact information posting requirements.
- After-hours security protocols
- Incident reporting procedures

All permits and notifications will be secured prior to project initiation. Copies will be maintained in the on-site project documentation file and available for regulatory inspection. Any

modifications or updates will be processed immediately with all relevant agencies as project conditions require.

E. Licensing Requirements

All personnel involved in hazardous materials abatement activities at the Baptist Hospital complex must maintain current and valid licenses and or Training as required by state regulations.

Contractor Licensing

- Florida State Certified Asbestos Contractor License
- Florida General Contractor License
- Current liability insurance certificates
- Workers' compensation insurance verification
- Local business licenses as required.

Supervisor Requirements

- Florida Asbestos Supervisor Training certification.
- OSHA 40-Hour HAZWOPER certification
- Current medical surveillance documentation
- Respiratory protection certification
- First Aid/CPR certification
- Documentation of annual refresher training

Worker Requirements

- Florida Asbestos Worker Training certification
- Current medical surveillance clearance
- Respiratory protection certification
- Documentation of required safety training.
- Annual refresher certification
- Personal identification documentation

Project Monitor/Air Sampling Requirements

- Florida Licensed Asbestos Consultant
- Air Sampling Technician certification
- Laboratory technician certifications

All licenses and certifications will be maintained current throughout the project duration. Copies of all required documentation will be maintained on-site and available for regulatory inspection. Any personnel found working without proper licensing will be immediately removed from the project site until proper documentation is provided.

4. PROJECT ORGANIZATION

The overall project management structure, including primary roles and responsibilities, reporting relationships, and organizational hierarchy, is detailed in the comprehensive Baptist Hospital Demolition Work Plan. This section addresses the specific organizational elements and additional personnel required for hazardous materials abatement and remediation activities.

The abatement team operates within the established project management framework while maintaining specialized supervision and safety oversight required by federal and state regulations. This specialized team includes certified asbestos supervisors, licensed consultants, and qualified environmental monitors who work in coordination with the primary project management team.

5. SCOPE OF WORK

A. Overview

Environmental assessments conducted throughout the Baptist Hospital complex have revealed a diverse range of regulated materials requiring proper removal and disposal prior to demolition activities. The findings encompass multiple categories of hazardous materials distributed throughout various sections of the facility.

Asbestos-containing materials represent a significant portion of the identified hazards, appearing in multiple forms throughout the complex. These include thermal system insulation on piping, tanks and mechanical systems, various flooring materials with associated mastics, sink coatings, mastic on HVAC equipment. Additional ACM has been identified in drywall joint compound from specific construction periods, window glazing compounds, vibration gaskets, caulking, roofing components, and Transite panels on exterior of Towers 1 and 2.

Lead-containing materials are present in several forms, particularly in specialized medical areas. These include lead-based paint on various surfaces, lead-lined walls in X-ray rooms and imaging suites, and specialized shielding in radiological areas. Lead painted flooring, Lead sheet materials and door frames in medical rooms also require specific handling and disposal protocols.

Universal wastes are distributed throughout the facility, consisting primarily of lighting components such as fluorescent tubes and ballasts. Additional universal waste materials include batteries from emergency systems.

Detailed quantities and specific locations of all identified materials are thoroughly documented in the survey reports and will guide the systematic removal process outlined in subsequent sections of this work plan.

B. Areas to be Abated.

The scope of abatement encompasses multiple buildings within the hospital complex, including the Main Hospital, Single Story building, Hospital-to-Towers Connector, and Towers 1, 2, and 3. The Main Hospital contains the highest concentration of materials requiring abatement, including friable and non-friable asbestos-containing materials, lead-containing surfaces, and hazardous/universal waste components.

Asbestos abatement will address approximately 345,089 square feet of non-friable Category I materials, primarily consisting of flooring and Transite panels. Friable RACM materials totaling 9,128 units will be removed, including pipe insulation in crawlspaces, mechanical tunnels, and boiler/tank installations. Additional attention will be given to 79,250 square feet of Category II materials, including duct insulation with ACM mastic and sink undercoating's.

Lead-containing material abatement encompasses approximately 50,274 square feet of surfaces, including 39,824 square feet of wall surfaces (clay walls, painted GWB, and glazed ceramic tile), 5,800 square feet of lead shielding in radiological rooms, and 8,600 square feet of metal surfaces. Component removal includes 47 doors and frames, 40 roof penetrations, and 700 linear feet of metal railings in stairwells.

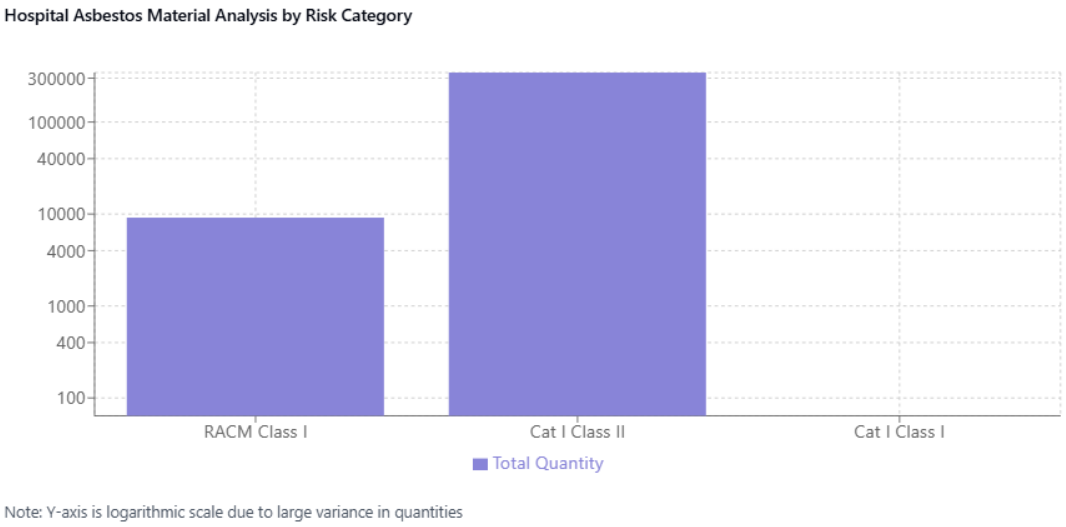
Universal and hazardous waste removal involves 21,538 potentially PCB-containing light ballasts and 44,072 fluorescent bulbs distributed throughout all buildings. The Main Hospital additionally requires removal of specialized hazardous materials, including three 54-gallon tanks of BIOTRIL 12.5 and three 5-gallon pails of Oxidizer 5.1.

C. Types of Hazardous Waste Present

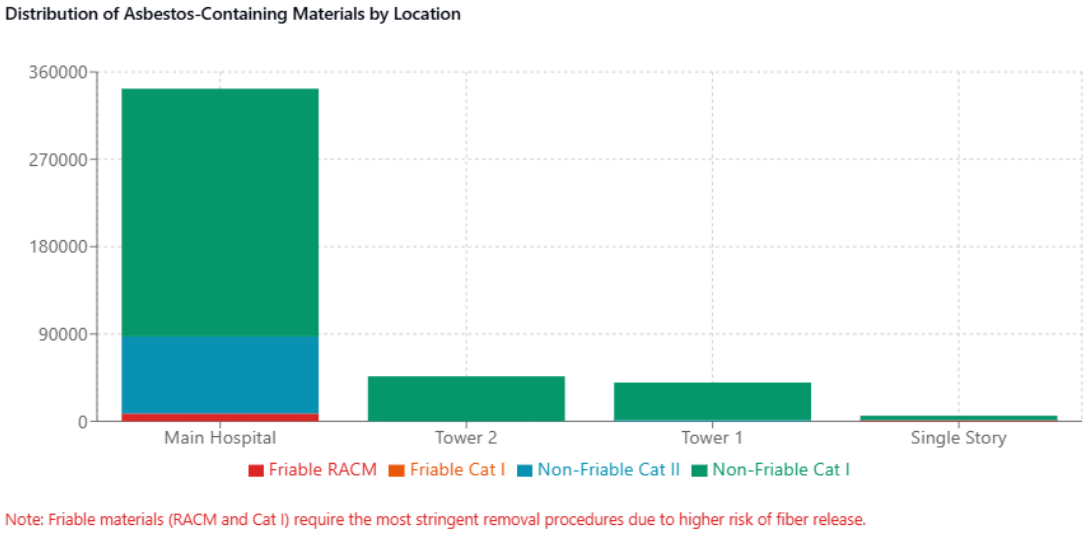
Asbestos Hazards

Based on the analysis, here are the key findings of the known materials that are present at the in the Main Hospital and the adjacent tower:

1. The majority of asbestos-containing materials by quantity are Category I, Class II materials (345,089 units), which are primarily non-friable flooring and Transite materials. These pose a lower immediate risk when intact but still require proper handling during removal.
2. RACM (Regulated Asbestos-Containing Material) Class I materials, which include pipe insulation, boiler insulation, and pipe fittings, account for 9,128 units. These are friable materials that pose a higher risk and require the most stringent removal procedures.
3. There is a smaller amount of Category I, Class I materials (64 units), consisting of fire doors, which are friable and require careful handling despite their lower quantity.



The visualization uses a logarithmic scale due to the large difference in quantities between categories.



The visualization above shows the distribution of asbestos-containing materials across different hospital locations. Here are the key findings:

1. Main Hospital:
    - Largest quantity of asbestos materials overall
    - Contains all four hazard categories.
    - Majority is Non-Friable Cat I (255,400 units, mainly flooring)
    - Significant amount of Non-Friable Cat II (79,250 units, including duct and pipe insulation)
    - Notable Friable RACM presence (8,028 units, including pipe insulation and fittings)

2. Towers 1 and 2:
    - Primarily Non-Friable Cat I materials (flooring and Transite)
    - Tower 2: 46,301 units of Non-Friable Cat I
    - Tower 1: 38,788 units of Non-Friable Cat I
    - Both have smaller amounts of Non-Friable Cat II (sinks and pipe insulation)

3. Single Story:
    - Small total quantity but includes friable materials.
    - 4,600 units of Non-Friable Cat I (flooring)
    - 1,100 units of Friable RACM (boiler/tank insulation and pipe fittings)
    - 32 units of Friable Cat I (fire doors).

4. Tower 3:
    - Very small quantity on Non-Friable Mirror Mastic that does not show up on chart.

The visualization uses color coding to distinguish between hazard categories:

- Red: Friable RACM (highest risk)
- Orange: Friable Cat I
- Blue: Non-Friable Cat II
- Green: Non-Friable Cat I (lowest risk)

Lead Hazard

Summary of Lead-Containing Materials:

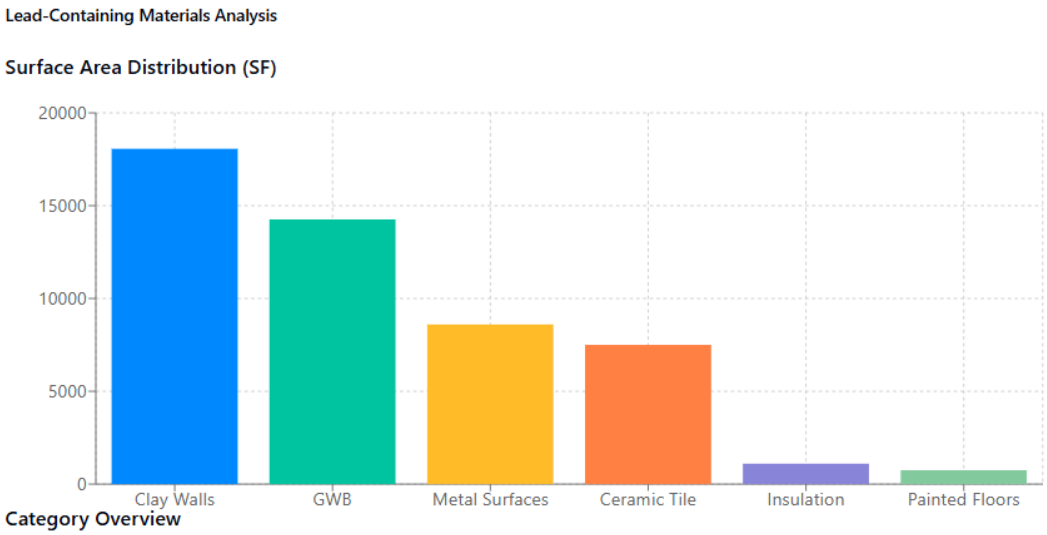
1. Surface Area Distribution (Total: 50,274 SF):
    - Walls and Surfaces (39,824 SF):
        - Clay Walls: 18,064 SF
        - Painted GWB: 14,260 SF
        - Glazed Ceramic Tile: 7,500 SF
    - Lead Shielding (5,800 SF):
        - X-Ray/CT Rooms: 4,800 SF (Main Hospital)
        - X-Ray/CT Rooms: 1,000 SF (Towers)
    - Metal Surfaces (8,600 SF):
        - Stair Risers: 2,800 SF
        - Other Metal Surfaces: 5,800 SF
    - Other Surfaces:
        - Tank Insulation: 1,100 SF
        - Painted Floors: 750 SF

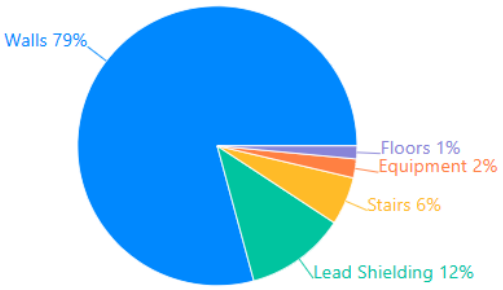
2. Count/Linear Items:
    - Doors and Frames:
        - Metal Doors: 35 EA (Main Hospital)
        - Wood Doors: 12 EA (10 Main Hospital, 2 Tower)

- Roof Penetrations: 40 EA
- Metal Railings: 700 LF (Stairwells)

3. Distribution by Location:
   - Main Hospital contains majority of materials:
     - All stairwell components
     - Most lead-lined rooms
     - Majority of painted surfaces
   - Towers:
     - Limited to X-ray/CT room shielding.
     - Small number of doors
     - Structural support members

The visualization showing detailed breakdowns by substrate type and category. The majority of lead-containing materials are in wall surfaces and medical room shielding, with significant quantities in metal components throughout the facilities.





Surface Area Totals

Total Wall Surface: 39,824 SF

Total Lead Shielding: 5,800 SF

Total Metal Surfaces: 8,600 SF

Other Surfaces: 4,650 SF

Count/Linear Items

Doors and Frames: 47 EA

Roof Penetrations: 40 EA

Metal Railings: 700 LF

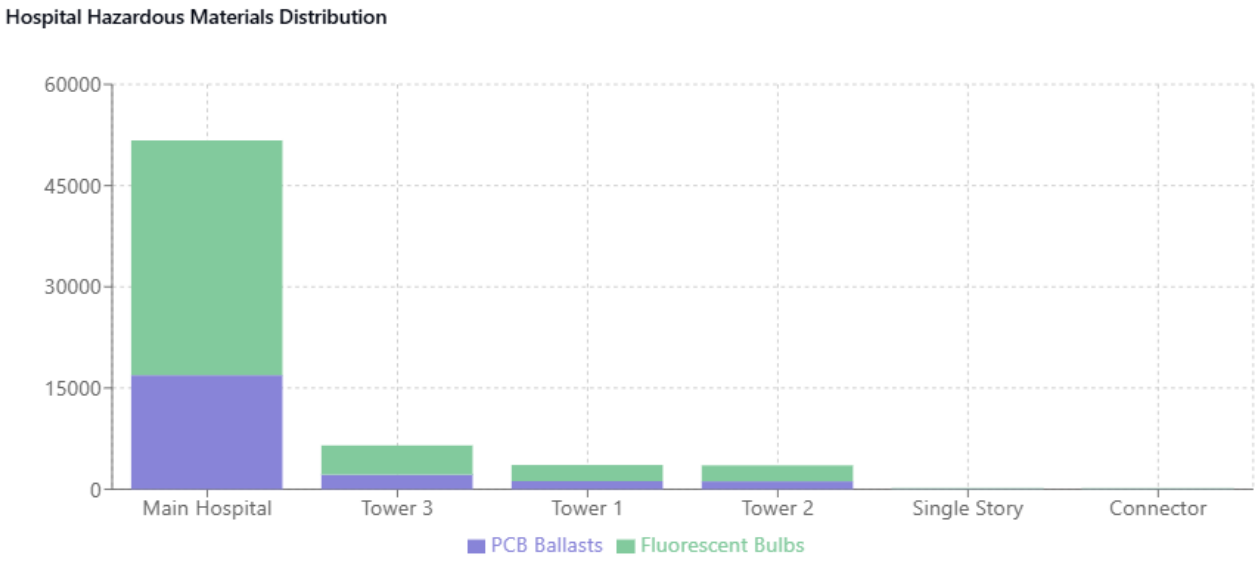
Universal and Hazardous Wastes

Summary of Universal and Hazardous Waste Quantities:

1. Universal Waste Totals:
    - PCB Ballasts: 21,538 units
    - Fluorescent Bulbs: 44,072 units
    - Consistent 1:2 ratio of ballasts to bulbs across all locations
2. Hazardous Waste Totals:
    - BIOTRIL 12.5: 162 gallons (3 tanks × 54 gallons)
    - Oxidizer 5.1: 15 gallons (3 pails × 5 gallons)
    - All hazardous materials located in Main Hospital
3. Distribution by Location:
    - Main Hospital: 78.5% of all universal waste
        - 16,900 ballasts
        - 34,800 bulbs
        - 100% of hazardous materials
    - Tower 3: 10.1% of universal waste
        - 2,167 ballasts
        - 4,320 bulbs
    - Tower 1: 5.6% of universal waste
        - 1,197 ballasts
        - 2,394 bulbs

- Tower 2: 5.5% of universal waste
  - 1,174 ballasts
  - 2,358 bulbs
- Single Story and Connector: 0.2% each
  - Combined 100 ballasts.
  - Combined 200 bulbs.

The visualization below shows this distribution detailed information for each location. The vast majority of materials are concentrated in the Main Hospital, with the three towers containing most of the remaining waste. The Single-Story building and Connector have relatively minimal quantities.



D. Quantities and Locations

The following summary identifies materials that have tested positive for asbestos or are presumed to contain asbestos based on comprehensive environmental assessments. This information has been compiled from multiple sources, including PSI's 2023 survey, OHC's 2024 survey, PSI's 2025 supplemental testing, and additional consultant evaluations.

Throughout the project, NorthStar will maintain vigilance for previously unidentified suspect materials. Any such materials discovered during abatement activities will be tested by PSI to verify asbestos content before proceeding with removal. This systematic approach ensures all asbestos-containing materials are properly identified and remediated according to applicable regulations.

Asbestos Containing Materials

A. *Single Story Structure*

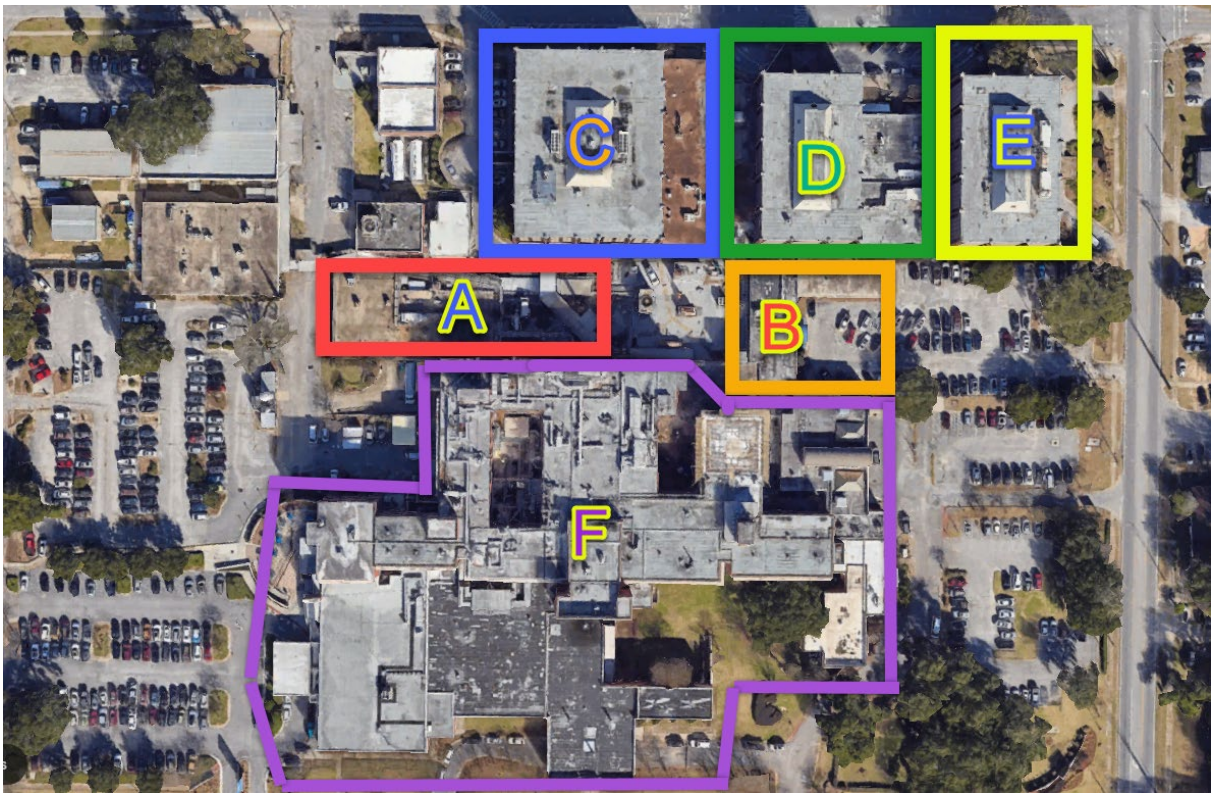
Universal and Hazardous Waste Materials

Site Area	Light Ballasts (Possibly PCB)	Fluorescent Light Bulbs (EA)
A - Single Story	52	104
B - Connector Bldg.	48	96
C - Tower 3	2,167	4,320
D - Tower 2	1,174	2,358
E - Tower 1	1,197	2,394
F - Main Hospital	16,900	34,800

E. Sequence of Work

NorthStar has developed a strategic sequence for hazardous materials removal to ensure safe and efficient demolition operations. The process has been carefully planned to maintain site safety while optimizing workflow throughout the project.

ABATEMENT REMEDIATION SEQUENCING



The abatement sequence will proceed in three distinct phases:

Phase 1 will address Areas A and B, both single-story sections of the complex. Area A will be abated to create a staging zone for future demolition equipment, while Area B, which serves as a connector between the main building and the towers, will be abated and sealed with containment barriers to isolate the tower section.

Phase 2 will focus on complete abatement and remediation of the towers. Following the completion of hazardous materials removal, the towers will undergo necessary interior demolition preparation work. This preparatory phase will include various structural modifications and interior strip-out activities required before the towers can be safely razed.

Phase 3 will concentrate on the main hospital facility. Abatement crews will systematically remove hazardous materials beginning at the uppermost floors and proceeding downward to ground level, ensuring thorough remediation of all identified materials.

Upon completion of Phase 2 and all associated preparatory demolition work, the actual razing of the towers will commence, utilizing the previously cleared Areas A and B for equipment access and staging.

Section “A" – Single Story Structure

The single-story service wing, constructed between 1985 and 1990, encompasses 18,400 square feet of support facilities now standing vacant. The former boiler room retains its industrial infrastructure, including heavy-duty concrete pads, large-scale ventilation systems, and extensive utility connections that previously supported the hospital's heating systems. The space maintains its specialized drainage systems, elevated walkways, and reinforced flooring designed to support heavy mechanical equipment.

The former morgue area features its specialized ventilation systems, drainage infrastructure, and built-in storage systems. This space retains its institutional-grade finishes, including chemical-resistant flooring and wall surfaces, along with specialized plumbing and electrical systems specific to morgue operations.

The abandoned laundry facility maintains its commercial-grade ventilation systems, heavy-duty plumbing infrastructure, and specialized electrical systems that previously powered industrial washing and drying equipment. Floor drains, lint collection systems, and steam pipe connections remain intact throughout this area.
The maintenance and carpentry shop areas retain their industrial-grade electrical systems, dust collection duct work, and storage room configurations. These spaces feature reinforced flooring, heavy-duty utility connections, and specialized ventilation systems typical of maintenance facilities.

Throughout the wing, former office spaces and housekeeping areas maintain their basic configurations, including built-in storage systems and utility connections. The building's support infrastructure remains in place, including mechanical systems, electrical distribution panels, and commercial-grade plumbing systems.

Section “B” – Connector from Main Hospital to Towers

The connector section, constructed in 1976, serves as a 3,500-square-foot corridor link between the main hospital's first floor and Tower 2. This single-story structure, now vacant, retains the shell of its former multi-purpose spaces. The former medical meeting room area maintains its institutional layout with abandoned audiovisual mounting points and specialized electrical connections. Adjacent to this space, the small kitchen area retains its commercial-grade plumbing infrastructure, ventilation hoods, and utility connections.

The main corridor, which spans the distance between the hospital and Tower 2, features the typical institutional elements including wide passageways with handrails and durable flooring systems. The abandoned office suite areas and former social services section retain their basic configurations, including built-in reception desk framework and storage room layouts.

Throughout this connecting structure, the building systems remain in place, including HVAC ductwork, electrical distribution systems, and suspended ceiling grids. The space maintains its fire-rated separation walls and doorways, essential elements that were part of the original hospital complex's life safety systems.

Section “C” – Tower 3

A five-story medical office building encompassing 112,200 square feet, stands vacant with its core infrastructure intact. The ground floor retains the former Subway restaurant space with its commercial kitchen ventilation systems, utility connections, and serving counter framework. Adjacent to this area, the abandoned facilities management offices maintain their basic office configurations and utility systems.

Throughout the upper floors, former physician office suites retain their distinctive medical office layouts, including built-in reception desks, waiting areas, and exam room configurations. The specialized imaging areas that previously housed X-ray and CT scan equipment feature their heavy-duty electrical systems, lead-lined walls for radiation shielding, and reinforced flooring designed to support heavy medical equipment. These imaging suites maintain their specialized ventilation systems and equipment mounting points, though all imaging equipment has been removed.

The building's essential infrastructure remains in place, including elevator shafts, mechanical rooms housing HVAC systems, electrical distribution rooms, and telecommunications conduits. Wide corridors designed for patient accessibility feature institutional-grade flooring systems and built-in handrails. Each floor contains utility chase areas and commercial-grade restroom facilities with their plumbing infrastructure intact.

Support spaces throughout the building retain their built-in cabinetry, plumbing connections, and specialized electrical systems typical of medical office environments. The building's structural elements include reinforced floors and specialized wall systems designed to accommodate the previous medical office and imaging facility requirements.

Section “D” – Tower 2

The second tower, constructed in 1976, encompasses 64,000 square feet of floor space across multiple levels. This structure, accessible via the connector section from the main hospital, stands vacant with its institutional infrastructure intact. The ground floor retains the shell of its former retail spaces, including the abandoned pharmacy with its specialized ventilation systems, security features, and built-in cabinetry. Adjacent to this area, the former gift shop space maintains its commercial-grade electrical systems and display window frames.

The upper floors feature typical hospital architectural elements including wide corridors with handrails, built-in nurse stations, and patient room layouts with their associated medical gas outlets, headwall systems, and bathroom configurations. Utility services remain throughout, including elevator shafts, mechanical rooms with HVAC equipment, electrical distribution systems, and telecommunications infrastructure.

The building's core facilities include abandoned dietary service areas, medication rooms with their specialized ventilation and security systems, and utility rooms with their plumbing and electrical infrastructure. Each floor retains its institutional-grade flooring systems, suspended ceiling grids, and specialized lighting fixtures typical of medical facilities.

Section “E” – Tower 1

The first tower, constructed in 1974, encompasses 64,000 square feet of floor space designed primarily for medical offices and physician practices. In its vacant state, the tower retains the core infrastructure typical of a professional medical office building. The floors are characterized by former physician suites with their built-in reception counters, waiting areas, and exam room configurations.

Throughout the tower's levels, medical office suites maintain their original layouts, including built-in cabinetry, plumbing connections for exam rooms, and specialized electrical systems. Former procedure rooms and consultation spaces contain fixed cabinet systems, abandoned plumbing infrastructure, and ceiling-mounted lighting systems typical of medical office environments.

The building's core infrastructure remains intact, including elevator banks, mechanical rooms housing HVAC equipment, electrical distribution systems, and telecommunications rooms. Wide corridors, designed to accommodate patient traffic, feature built-in handrails and durable flooring systems. Each floor contains utility chase areas and commercial-grade restroom facilities.

Section “F” – Main Hospital Structure

The main Baptist Hospital building, originally constructed in 1943, evolved significantly over its 70-year operational history through multiple expansions and renovations. From its initial 79,000 square feet, the complex grew to encompass 432,700 square feet of medical space, reflecting the community's growing healthcare needs and advancing medical technologies.

Now vacant and prepared for demolition, the complex contains the remnants of its comprehensive medical facilities, stripped of operational equipment but retaining its built-in infrastructure. The building's evolution is evident in its varied architectural styles and construction methods across different periods yet maintains its institutional medical character throughout.

Former patient care areas include empty patient rooms with remaining bathroom fixtures, built-in headwall medical gas systems, and nurse call stations representative of different eras of healthcare delivery. Abandoned operating suites from various periods retain ceiling-mounted surgical light tracks, built-in medical gas lines, and specialized flooring systems. The intensive care units and emergency department areas maintain their distinctive floor plans with fixed medical gas outlets, electrical systems, and specialized ventilation components that showcase the evolution of medical technology over the decades.

Throughout the facility, institutional features remain such as wide corridors with handrails, built-in reception desks, medication rooms with cabinet systems, and utility rooms with plumbing infrastructure. Support areas include vacated mechanical rooms with HVAC equipment from different construction periods, elevator machinery rooms, and electrical distribution systems that were expanded and upgraded over time. The former kitchen and cafeteria spaces contain commercial-grade ventilation hoods, plumbing systems, and built-in serving lines that were modified and enhanced through various renovations.

The building's growth over seven decades is reflected in its layered infrastructure, where newer systems were integrated with existing ones, creating a complex network of utilities and services that supported the hospital's expanding operations until its closure.

F. Work Area Preparations

Prior to establishing containments, a comprehensive pre-abatement inspection and preparation phase will be conducted. NorthStar supervisors will perform detailed walk-throughs of each work area, systematically identifying and documenting all materials requiring abatement. During these inspections, all locations containing asbestos, lead, and hazardous materials will be clearly marked using standardized labeling and mapping protocols to ensure complete inclusion within planned containment areas.

The inspection phase will also identify any suspect materials requiring additional characterization. Intertek personnel will collect samples of these materials for laboratory analysis to determine proper handling and disposal requirements. No containment construction will begin until all material sampling and analysis is complete for the designated work area.

Concurrent with the inspection process, all non-fixed furniture, debris, and general trash will be removed from the work areas. This material will be properly segregated, with any items suspected of contamination being staged for testing before disposal. The removal of these items provides clear access to all surfaces requiring abatement and ensures efficient containment setup.

Once an area has been cleared of debris and all materials have been properly identified and marked, the supervisor will conduct a final pre-containment inspection to verify:

- All materials requiring abatement have been properly identified and marked.

- Additional sampling requirements have been completed.
- Area is clear of all non-essential items.
- Adequate access exists for containment construction.
- All fixed items requiring protection have been identified.

This systematic approach to pre-abatement preparation ensures thorough identification of hazardous materials and proper containment design before beginning active abatement operations

6. WORK PROCEDURES

A. Material Classifications and Setup Requirements

The following table categorizes all identified asbestos-containing materials at the Baptist Hospital complex according to their required containment and removal procedures. Materials are classified based on their condition, friability, and potential for fiber release during removal.

Setup Type	Material Description	Location	EPA Category
Setup 1 Enclosed/Encapsulation			
	Fire Doors	Main Hospital, Single Story	Cat 1 Friable
	Sinks with ACM Coating	Main Hospital, Tower 1 & 2	Cat II Non-Friable
	Mirror Mastic	Tower 3	Cat I Non-Friable
	Vibration Dampers	Main Hospital	Cat II Non-Friable
Setup 2 - Exterior Work			
	Transite Panels	Towers 1 & 2	Cat I Non-Friable
	Window/Door Caulking	Main Hospital	Cat II Non-Friable
	Window Glazing	Main Hospital	Cat II Non-Friable
	Roofing Mastic	Main Hospital	Cat II Non-Friable

Setup 3 - Non-Friable			
	Floor Tile and Mastic	All Buildings excluding Tower 3	Cat I Non-friable
	Ceramic Wall Tile/Grout	Main Hospital	Cat II Non-friable
	Black Mastic/Mesh on Walls	Main Hospital	Cat II Non-friable
	Pipe Insulation with ACM Mastic	Main Hospital, Tower 1	Cat II Non-friable
	Duct Insulation with ACM Mastic	Main Hospital	Cat II Non-friable
Setup 4 - Friable			
	Pipe Insulation (Tunnels)	Main Hospital	RACM
	Boiler/Tank Insulation	Main Hospital, Single Story	RACM
	Sheetrock Systems	Main Hospital	Cat II Non-friable
Setup 5 - Glovebag			
	Used for small amounts of friable pipe insulation where full containment would be excessive for the limited scope of removal	N/A	RACM

Notes:

1. Setup requirements may be modified based on material condition or site-specific factors
2. Any damaged materials may require upgrade to more stringent containment procedures
3. All setups must comply with federal, state, and local regulations
4. Changes in material condition during removal may necessitate containment modification

B. Containment Setup

Setup 1 Procedures - Enclosed/Encapsulated Material Removal

Pre-Removal Setup

- Clear immediate work area of unnecessary items
- Place 6-mil polyethylene drop cloths extending minimum 3 feet beyond work area
- Stage HEPA vacuum for immediate access
- Place appropriate tools at work location.
- Position waste packaging materials nearby
- Post warning signs at approaches to work area

Minimal Area Preparation

- No critical barriers required.
- No negative air required.
- No decontamination unit required.
- Single layer of 6-mil poly drop cloth sufficient.
- Warning signs indicating asbestos material removal.
- Barrier tape to designate work area perimeter.

Equipment Staging

- HEPA vacuum
- Hand tools for component removal
- 6-mil polyethylene sheeting for waste wrapping
- Warning labels and tape
- Cleanup supplies
- Personal protective equipment

These simplified setup procedures apply only to removal of materials where the asbestos-containing component remains fully enclosed and undisturbed during the removal process. If any damage occurs that could release fibers, work will stop immediately, and full containment procedures will be implemented.

Setup 2 Procedures - Exterior Transite Panel Removal and Window Door Caulking

Ground Preparation

- Install 12-foot-wide minimum layer of 6-mil polyethylene sheeting along building exterior extending from foundation.
- Secure edges of ground sheeting to prevent wind disturbance.
- Place support framework or hay bales at outer edge to capture any materials.
- Secure sheeting to foundation wall to create continuous barrier.

Work Zone Demarcation

- Install barrier tape and warning signs minimum 20 feet from building.
- Create designated pathways for worker access.
- Establish waste packaging and staging area on ground protection.
- Post appropriate OSHA warning signs at all approaches.

Equipment Staging

- Position aerial lifts or scaffolding as needed.
- Locate HEPA vacuums for immediate access.

- Stage waste receptacles within designated area
- Prepare cleaning equipment and supplies.
- Position water supply for misting/cleaning

Weather Considerations

- Install wind speed monitoring equipment.
- Monitor weather forecasts before beginning work.
- Suspend operations when wind speeds exceed 15 mph.
- No work during precipitation
- Maintain dust suppression capabilities.

These procedures are specifically for **intact** panel removal.

Setup 3 Work Area Procedures - Non-Friable Material Containment Setup

For non-friable materials that will remain substantially intact during removal, modified containment procedures will be implemented while maintaining all necessary safety and regulatory requirements. These procedures apply to materials such as floor tiles, mastics, and intact Transite panels.

Pre-Removal Area Preparation The work area will be cleared of all movable objects and pre-cleaned using HEPA vacuums. A detailed inspection will be performed to ensure all non-friable materials are in good condition and suitable for intact removal. Any damaged areas that may create friable conditions will be documented and addressed using full containment procedures.

Modified Containment Requirements

- Installation of 6-mil polyethylene sheeting as critical barriers over all openings
- Sealing of all HVAC vents and electrical outlets in the immediate work area
- Coverage of immovable objects and adjacent surfaces with 6-mil polyethylene sheeting
- Establishment of a regulated area using barrier tape and warning signs
- Installation of drop cloths extending at least 6 feet beyond the work area
- Creation of a negative pressure environment where practical

Decontamination System A modified decontamination area will be established consisting of:

- Clean area for PPE donning and doffing
- Equipment cleaning station
- Waste packaging area
- HEPA vacuum station for cleaning tools and equipment

Engineering Controls

- HEPA vacuum equipment readily available during all removal activities
- Adequate ventilation maintained throughout the work area.
- Misting bottles available for dust suppression
- Wet methods employed as needed to minimize potential fiber release.

These modified containment procedures will be continuously monitored to **ensure non-friable materials remain intact** during removal. If any materials become friable during removal, work will stop immediately, and full containment procedures will be implemented before continuing.

Setup 4 Procedures - Friable Materials

Pre-Containment Preparation

- Clear all movable items from work area.
- Pre-clean all surfaces using HEPA vacuums.
- Cover and secure all immovable objects with 6-mil polyethylene sheeting.
- Shut down and lock out all HVAC systems servicing work area.
- Install temporary lighting systems for work area illumination.
- Seal all floor drains within work area.

Critical Barrier Installation

- Install two layers of 6-mil polyethylene sheeting over:
  - All windows and exterior openings
  - HVAC supply and return vents.
  - Doorways and access points
  - Electrical outlets and switches
  - Floor drains and plumbing penetrations
  - Ceiling penetrations and light fixtures
  - Elevator openings where applicable
- Seal all seams with spray adhesive and tape.
- Verify integrity of all critical barriers

Containment Construction

- Install two layers of 6-mil polyethylene on walls.
- Install two layers of 6-mil polyethylene on floors.
- Minimum 12-inch overlap at all seams
- Seal all seams with spray adhesive and tape.
- Install additional reinforcement at high-traffic areas.
- Install splash guards in wet removal areas.
- Install viewing ports at strategic locations.

Decontamination System

- Construct three-chamber worker decontamination unit:
  - Clean Room: PPE storage, changing area.
  - Shower Room: HEPA-filtered hot/cold water shower
  - Equipment Room: Contaminated PPE removal

- Construct two-chamber waste decontamination unit:
  - Washroom: Container cleaning
  - Holding Area: Clean container storage

Negative Pressure System

- Install HEPA-filtered negative air machines.
- Calculate proper number of units for minimum four air changes per hour.
- Maintain minimum -0.02 inches water column.
- Install continuous pressure monitoring equipment.
- Position exhaust to optimize air flow patterns.
- Install backup units for redundancy.
- Direct all exhaust air to building exterior.

These procedures must be fully implemented and inspected before any friable material removal begins. Daily inspections will verify continued integrity of all containment systems.

Setup 5 Procedures - Glovebag Operations

Pre-Work Area Preparation

- Clear immediate work area of movable objects
- HEPA vacuum and wet wipe all surfaces within work area.
- Place 6-mil polyethylene drop cloths extending minimum 6 feet in all directions from work area.
- Install barrier tape minimum 10 feet from work area.
- Post appropriate asbestos warning signs at all approaches.

Area Access Control

- Establish regulated area using barrier tape.
- Post warning signs at all approaches to work area
- Create designated entry point for authorized personnel.
- Maintain clear access path to work area.
- Ensure adequate spacing for worker movement.
- Equipment Staging

- Pre-inspect glovebags for proper size and condition.

- Position HEPA vacuum for immediate access
- Prepare amended water sprayer.
- Stage additional glovebags
- Position disposal bags
- Locate emergency repair materials (tape, poly)
- Stage backup personal protective equipment
- Place tools within easy reach of work area

Area Protection

- Cover floor/surfaces directly below work area with 6-mil polyethylene
- Secure edges of drop cloths to prevent tripping hazards.
- Position catch basin for water collection if needed.
- Ensure adequate lighting for work area.
- Stage cleanup materials for immediate access

These setup procedures must be completed and inspected before any glovebag installation begins. The supervisor will verify all preparations are complete before authorizing work to begin.

Setup 6 Procedures - Universal Waste Operations

The setup procedures for universal waste operations at the Baptist Hospital complex require establishment of secure, well-organized collection and storage areas designed to safely handle the significant quantities of fluorescent lamps, ballasts, batteries, and mercury-containing devices identified throughout the facility. These areas must be clearly designated with appropriate signage in both English and Spanish, equipped with proper spill containment systems, and maintained with adequate ventilation and fire protection measures.

Equipment staging includes strategic positioning of specialized containers for lamp storage, ballast collection drums, and designated containers for batteries and mercury devices. HEPA vacuums will be readily available for broken lamp cleanup, with spill control materials and proper PPE maintained in accessible locations. Packaging supplies and container labeling materials will be staged to ensure proper handling and documentation of all universal waste components.

Area access will be controlled through barrier tape and warning signs, with designated entry points and clear emergency exit routes established. Adequate lighting will be maintained throughout the work areas, with security measures implemented during non-operational periods. Inventory control systems will be established to track accumulation dates, maintain proper labeling, and document all collected materials.

Setup 7 Procedures - Hazardous Waste Operations

Hazardous waste operations require establishment of dedicated storage areas with comprehensive containment systems designed to safely manage the BIOTRIL 12.5, Oxidizer 5.1, and other hazardous materials identified within the hospital complex. These areas must incorporate secondary containment systems, proper ventilation, emergency response equipment, and appropriate fire suppression systems while maintaining strict segregation of incompatible materials.

Storage area preparation includes installation of containment pallets, drum storage racks, and clearly defined waste segregation zones. Temperature monitoring systems and adequate lighting will be maintained, with emergency equipment positioned for immediate access. Security measures will ensure controlled access to all hazardous waste storage areas.

Comprehensive safety systems include posted emergency procedures, communication systems, first aid equipment, and strategically located fire extinguishers and eyewash stations. A decontamination area will be established with spill control equipment readily available. Documentation stations will be set up for waste profiling, manifest preparation, and container labeling, with all required regulatory information and emergency contact details prominently displayed.

Area security will be maintained through fencing, controlled access points, adequate lighting, and surveillance systems. All storage areas will be secured during non-operational periods, with intrusion alarms and emergency contact information posted. These setup procedures must be fully implemented and verified through inspection before any hazardous waste handling operations begin, with daily inspections conducted to ensure continued compliance with all requirements.

Setup 8 Procedures - Lead Work Area Controls

Lead work areas require minimal setup focused primarily on access restriction and basic controls. Barrier tape will be installed at least 10 feet from the work area with appropriate lead warning signs posted at all approaches. A single entry point will be established for authorized personnel, with clear access paths maintained throughout the work zone.

Basic area preparation includes placement of 6-mil polyethylene drop cloths in removal areas, with HEPA vacuums and disposal containers positioned within the work zone. A handwashing station will be maintained near the exit point, and appropriate cleaning supplies will be kept readily available.

Equipment staging will include positioning of appropriate removal tools, packaging materials, and personal protective equipment within the designated work area. Cleanup supplies and water for dust control will be maintained nearby.

C. Engineering Controls

Engineering Controls 1 - Encapsulated and Non-Friable Materials

Since these materials present minimal risk of fiber release during proper removal, simplified engineering controls are appropriate:

Basic Controls

- HEPA vacuum readily available for cleanup.
- Hand tools selected to minimize material disturbance.
- Drop cloths to catch any debris.
- Spray bottle with amended water available if needed.
- Proper handling techniques to maintain material integrity.

Material-Specific Controls Fire Doors:

- Support mechanisms to prevent door damage.
- Proper lifting equipment if needed.
- Clean drop cloths for door placement

Sinks with Encapsulated Bottom Coating:

- Support brackets for controlled removal
- Proper backing material during handling
- Stable staging area for removed items.

Mirrors with Intact Mastic:

- Support systems to prevent breakage.
- Proper tools for sheetrock removal
- Level staging area for removed sections.

These basic engineering controls are sufficient when removing materials that remain fully enclosed or intact. If any damage occurs that could create fiber release, work will stop immediately, and enhanced controls will be implemented.

Engineering Controls 2 - Transite Panel Removal

Dust Control Measures

- Water delivery system with misting nozzles
- Sprayers for amended water application.
- Adequate water pressure and supply
- Control runoff from wet methods
- Adjustable spray patterns for different conditions

Weather Monitoring

- Wind speed and direction monitoring
- Work suspension when winds exceed 15 mph.
- No removal during precipitation
- Temperature monitoring for worker safety
- Weather forecast tracking.

Ground Control

- Runoff control measures
- Collection systems for water and debris
- Protection of ground surfaces
- Maintenance of clean work areas
- Prevention of material spread.

These engineering controls will be continuously monitored and adjusted based on site conditions. All equipment will be inspected daily to ensure proper operation.

Engineering Controls 3 - Negative Air Pressure Systems For full containment areas:

(Used for setups 3 Non-Friable and Setup 4 Friable Containments)

- Sufficient HEPA-filtered negative air machines to maintain minimum -0.02 inches water column. Air flow patterns designed to optimize containment cleanliness.
- Continuous pressure differential monitoring with recording devices
- Backup units maintained on standby for emergency use.
- Daily inspection and documentation of all units
- Exhaust air ducted to building exterior.
- Minimum four air changes per hour
- Strategic placement of units to prevent dead air spaces.

Local Exhaust Ventilation

- HEPA-filtered vacuum systems positioned at point of removal.
- Flexible duct work to capture debris at source.
- Adequate suction maintained through regular filter changes.
- Proper positioning to maximize capture efficiency.
- Regular inspection of hoses and connections
- Backup systems available if needed.

Dust Suppression

- Amended water spray systems.
- Airless sprayers for consistent coverage

- Misting systems in large removal areas
- Control of water application to prevent flooding.
- Regular inspection of spray equipment
- Adequate water supply maintained.

Air Filtration

- HEPA filtration of all exhaust air
- Proper sealing of filter housings

These engineering controls will be regularly inspected and maintained throughout the project duration. Any deficiencies will be immediately corrected to ensure continuous proper operation.

Engineering Controls 4 - Glovebag Operations

Primary Controls

- HEPA vacuum connected to glovebag for maintaining slight negative pressure.
- Amended water spray bottles for keeping material wet.
- Backup HEPA vacuum readily available
- Additional glovebags staged for immediate use.

Equipment Maintenance

- Pre-inspection of glovebags for defects
- Regular inspection of HEPA vacuum function
- Verification of sprayer operation
- Maintenance of adequate water supply
- Inspection of all tool conditions

Emergency Response Equipment

- Additional glovebags for repairs
- Duct tape for emergency sealing
- Spray adhesive readily available
- Backup PPE within reach
- Emergency cleanup supplies

These basic engineering controls will be maintained throughout glovebag operations. Equipment will be inspected before each use to ensure proper function. If any glovebag failure occurs, work will stop immediately, and appropriate emergency procedures will be implemented.

Engineering Controls 5 - Universal Waste Operations

Engineering controls for universal waste operations focus on safe handling and storage of the substantial quantities of fluorescent lamps, ballasts, and mercury-containing devices throughout the Baptist Hospital complex. Lamp removal and storage areas will maintain adequate ventilation with specialized storage containers designed to prevent breakage. HEPA vacuums will be positioned for immediate response to any broken lamps, with spill control measures and eyewash stations readily available.

Ballast removal operations will utilize proper lifting equipment with separate leak-proof containers designated for PCB and non-PCB ballasts. Spill control equipment and ventilation systems will be maintained in all work areas, with appropriate tools and cleanup supplies positioned for immediate access. Mercury device handling will incorporate spill containment barriers and specialized spill kits, supported by proper ventilation systems and sealed storage containers with secondary containment.

Engineering Controls 6 - Lead Work Operations

Lead work requires basic engineering controls focused on debris containment and dust suppression. Drop cloths will be positioned to catch debris, with HEPA vacuums and water misting equipment maintained for immediate cleanup of work areas. Proper collection containers and personal hygiene stations will be positioned near work zones, with adequate lighting maintained throughout.

Component removal will utilize appropriate lifting equipment with padded storage areas to maintain material integrity. Waste containers and packaging materials will be positioned near work areas to facilitate proper handling. These basic controls may be enhanced if TCLP testing indicates the need for hazardous waste protocols.

Engineering Controls 7 - Hazardous Waste Operations

Hazardous waste operations require comprehensive engineering controls to safely manage the BIOTRIL 12.5, Oxidizer 5.1, and other chemical materials identified in the hospital. Chemical storage areas will incorporate secondary containment systems, proper ventilation, temperature monitoring, and vapor detection equipment. Emergency eyewash stations and proper transfer equipment will be positioned throughout the work areas.

Liquid waste management systems include leak detection equipment, containment pallets, and proper grounding systems. Transfer pumps and overflow protection will be utilized for all liquid handling operations, with compatible containers and emergency stops positioned appropriately. Emergency response systems include communication equipment, fire suppression systems, and alarm installations, supported by emergency lighting and readily accessible decontamination equipment.

Ventilation systems will maintain negative pressure in storage areas through local exhaust ventilation with proper air monitoring equipment. Backup power systems ensure continuous operation of critical controls, while vapor recovery and filtration systems prevent release of hazardous emissions. All engineering controls undergo daily inspection with regular maintenance and calibration performed according to manufacturer specifications.

D. Removal Methods

Removal Methods 1 - Encapsulated/Non-Friable Materials Unlikely to Release

These materials require careful removal to maintain integrity:

- Fire Doors:
  - Remove hinges and hardware intact.
  - Remove door as complete unit.
  - Maintain vertical orientation.
  - Package without damaging door

- Sinks with Encapsulated Coating:
  - Disconnect plumbing connections.
  - Remove mounting hardware.
  - Lift sink without disturbing coating
  - Package intact unit

- Mirrors with Intact Mastic:
  - Remove surrounding drywall.
  - Support mirror during removal
  - Keep mastic and mirror intact.
  - Package complete assembly

Removal Methods 2 - Transite Panels

Exterior transite panel removal requires specific techniques:

- Remove fasteners carefully.
- Support panel during removal
- Lower panels using controlled methods.
- Keep panels intact during handling.
- Stack panels on padded surface
- Wrap panels in polyethylene.
- Handle as non-friable ACM.

Removal Methods 3 - Non-Friable Materials

Non-friable material removal will utilize methods that maintain material integrity:

- Remove materials intact where possible.
- Use manual methods to minimize breakage.
- Remove fasteners without damaging material.
- Package materials immediately upon removal
- Clean area continuously during removal
- Dispose of materials as non-friable ACM
- Verify complete removal from substrate.

Removal Methods 4 - Friable Materials

All friable material removal will occur within full containment under negative pressure. Workers will:

- Thoroughly wet materials with amended water
- Remove materials in manageable sections.
- Place materials directly into disposal bags
- Clean exposed surfaces as work progresses.
- Maintain continuous wetting throughout removal.
- Apply lockdown encapsulant to exposed surfaces.
- Perform detailed cleaning of all surfaces.

Removal Methods 5 - Glovebag Operations

Glovebag removal of pipe insulation will follow specific procedures:

- Install glovebag according to manufacturer specifications.
- Wet material thoroughly with amended water
- Remove insulation using tools in glovebag.
- Clean pipe surface completely
- Encapsulate exposed pipe surface.
- Remove glovebag with proper techniques.
- Package waste immediately
- All small quantities of pipe insulation, elbows and fittings will be removed pursuant to the OSHA Construction Asbestos Standard as Class I Work. Asbestos Warning tape will be placed around the perimeter of the work area, signage as specified by OSHA in English and Spanish will be posted at the entry location.

- Pipe insulation, elbows and fittings designated for removal will be enclosed using a glovebag attached to the system to be abated. Installation and removal procedures will be according to applicable requirements. After attachment of the glovebag equipped with all the required tools and an HEPA filtered vacuum, the material will be adequately wetted using a pump sprayer. The material will be thoroughly wetted, the insulation will be carefully sliced and removed from the pipe surface. The pipe surface will be scrubbed to remove all insulating material while rinsing the pipe surface. The inside of the bag will be cleaned while using the water spray and all debris will be moved to the bottom of the bag. The exposed portions of the pipe will be misted with encapsulant.

- The cleaned bag will be removed from the pipe as follows: The air will be removed from the bag with the HEPA filtered vacuum. The bag will be gathered in the center just under the pipe, twisted and sealed around the neck portion. A clean bag will be held under the glovebag. The sealed neck portion of the glovebag will be cut and dropped directly into the clean bag and sealed. All waste material will be placed in leak tight polyethylene bags and sealed. Sealed bags will be placed within the fully lined disposal container. Upon completion the removal and cleaning process, the area will be inspected for completeness of work.

Removal Methods 6 - Universal Waste Operations

The removal of universal waste from the Baptist Hospital complex requires careful handling of 44,072 fluorescent lamps and 21,538 ballasts, along with various mercury-containing devices. Fluorescent lamp removal will focus on maintaining lamp integrity to prevent mercury release. Tubes will be carefully removed from fixtures and immediately placed into proper storage containers, using original boxes when available or specialized tube storage containers for loose lamps. All containers will be properly labeled with contents and accumulation start dates, with detailed inventory maintained by area.

Any broken lamps encountered during removal will trigger specialized cleanup procedures using mercury vacuums, with debris placed in sealed containers and affected areas properly decontaminated. Ballast removal requires power disconnection and careful inspection for PCB labeling, with ballasts removed by cutting wires at ends and removing mounting hardware. PCB and non-PCB ballasts will be segregated into separate containers, properly labeled, and documented.

Mercury-containing devices such as thermostats and switches will be removed intact and placed in sealed containers, with careful attention to preventing any mercury release. Detailed documentation will track removal locations and maintain accurate device counts.

Removal Methods 7 - Lead Work Operations

Lead removal operations at the Baptist Hospital complex will emphasize material recovery through recycling of valuable metals while ensuring proper characterization and disposal of building materials. Metal components, including lead-lined doors, sheet materials, and radiation shielding, will be removed intact and staged for recycling. These materials represent valuable recyclable metals and will be carefully removed to maintain their integrity for recycling facilities.

X-ray room components require particular attention to carefully separate lead sheets and liners from backing materials. Detailed documentation will track weights and types of recyclable materials, with recycling facility receipts maintained for all shipments.

Building materials such as painted drywall and wood components will require TCLP testing to determine proper disposal methods. These materials will be packaged separately and clearly labeled pending test results. Materials testing below regulatory limits will be disposed of as construction debris, while any materials exceeding limits will be handled according to hazardous waste requirements.

Comprehensive documentation will maintain separate tracking logs for recycled metals and building materials, ensuring proper documentation of all material destinations. This approach maximizes the recovery of valuable metals through recycling while ensuring appropriate handling of building materials based on their tested characteristics.

Removal Methods 8 - Hazardous Materials Operations

Hazardous materials removal encompasses the careful handling of 162 gallons of BIOTRIL 12.5, 15 gallons of Oxidizer 5.1, and various laboratory chemicals throughout the facility. BIOTRIL 12.5 removal requires verification of container integrity and use of proper transfer equipment, with comprehensive spill containment maintained throughout the process. All materials will be packaged in approved containers with proper labeling and documentation.

Oxidizer 5.1 removal demands strict attention to material compatibility and proper separation from other materials. Laboratory chemical removal begins with complete inventory and sorting by hazard class, ensuring compatible materials are properly packaged and labeled according to regulations. Chemical storage areas will be systematically cleared with materials removed by hazard class while maintaining proper segregation.

All removal operations will be conducted by properly trained personnel using appropriate personal protective equipment. Comprehensive documentation will track the removal process, with proper labeling and current inventories maintained throughout. Any

deviations from standard procedures will require immediate supervisor notification and evaluation.

E. Cleaning and Decontamination

Transite Removal Areas

- Clean ground cover thoroughly
- HEPA vacuum staging areas
- Remove debris continuously.
- Clean equipment and tools
- Inspect area for residual material.
- Document cleaning completion

Non-Friable Material Areas

- HEPA vacuum debris immediately
- Remove drop cloths carefully.
- Clean all tools and equipment.
- Wet wipe adjacent surfaces
- Verify no residual debris.
- Document cleaning process

Full Containment Areas Initial Cleaning

- Remove all visible debris using wet methods.
- HEPA vacuum all surfaces starting at ceiling level.
- Wet wipe all surfaces in same sequence.
- Clean from top to bottom, back to front
- Remove outer layer of floor poly.
- Complete detail cleaning of exposed surfaces

Secondary Cleaning

- HEPA vacuum all surfaces again.
- Wet wipe all surfaces thoroughly.
- Allow surfaces to dry completely.
- Remove remaining wall poly.
- Final cleaning of all surfaces
- Apply lockdown encapsulant as needed.

Equipment Decontamination

- Clean all tools after use.
- Wet wipe equipment surfaces
- HEPA vacuum power tools
- Clean equipment before removal
- Inspect for residual contamination.
- Package contaminated items.

Glovebag Operations

- Wet wipe pipe after insulation removal
- HEPA vacuum work area thoroughly
- Clean all tools before removal.
- Wet wipes drop cloths before removal.
- Verify complete cleaning of work area.
- Document cleaning completion

F. Waste Handling

Enclosed/Encapsulated Material Waste Handling

Components containing enclosed or encapsulated asbestos materials, such as fire doors, coated sinks, and mirror assemblies, will be carefully placed into roll-off containers that have been prepared with double layers of 6-mil polyethylene sheeting. The items will be stacked and arranged to maximize space while preventing damage to the materials. Once the container is full, the polyethylene layers will be completely sealed to create a large containment bag within the roll-off container. Each container will be properly labeled with appropriate asbestos warnings and generator information. Detailed records will be maintained documenting the type and quantity of components placed in each container.

Transite Panel Waste Handling

Removed transite panels will be carefully loaded into roll-off containers that have been lined with double layers of 6-mil polyethylene sheeting. Panels will be stacked systematically on the container floor to prevent breakage, utilizing appropriate support and padding between layers as needed. When the container reaches capacity, the polyethylene layers will be sealed closed to create a secure containment bag within the roll-off container. Each filled container will be properly labeled with asbestos warnings and generator information. The containers will remain covered and secured until transportation to the approved disposal facility.

Non-Friable Material Waste Handling

Non-friable materials will be removed intact where possible and wrapped in two layers of 6-mil polyethylene sheeting. Large components will be wrapped and sealed completely with multiple layers of duct tape, labeled appropriately, and moved to the designated staging area. Materials such as floor tiles and transite panels will be stacked carefully on pallets, wrapped completely, and secured for transport. All non-friable waste packages will be labeled with generator information and appropriate asbestos warnings. These materials will be kept separate from friable waste and documented accordingly on waste shipment records.

Friable Material Waste Handling

All friable asbestos-containing materials will be properly wetted and immediately double-bagged in 6-mil polyethylene disposal bags upon removal. Each bag will be sealed using the "goose-neck" method, wiped clean in the waste decontamination unit, and properly labeled with generator information and asbestos warning labels. Filled bags will be transported from the work area through the waste decontamination unit, inspected for damage, and placed in clean, properly labeled drums or covered carts for movement to the designated secure waste storage area. All waste containers will be locked and secured at the end of each workday. Waste will be transported by licensed haulers to approved disposal facilities with proper documentation maintained for all shipments.

Glovebag Waste Handling

Upon completion of glovebag operations, the bags containing removed insulation will be twisted, goose-necked, and sealed with duct tape. The sealed glovebag will then be placed into a second 6-mil disposal bag, sealed, wiped clean, and properly labeled. These bags will be transported directly to the waste storage area, avoiding contact with other surfaces or materials. All disposal bags will be inspected for damage before transport and placed in appropriate containers for secure storage until final disposal.

Universal Waste Handling

Universal waste handling procedures at the Baptist Hospital complex will address the proper packaging and management of 44,072 fluorescent lamps, 21,538 ballasts, and various mercury-containing devices. Fluorescent lamps will be carefully packaged in appropriate containers, utilizing original boxes when available or specialized tube containers for unboxed lamps. All containers will be properly labeled with contents and accumulation dates, with boxes stacked to prevent breakage and maintained in designated storage areas.

Ballast handling requires strict segregation between PCB and non-PCB components, with materials placed in separate DOT-approved drums. Each container will be labeled with contents and accumulation dates, maintaining ballast counts by type while ensuring drum weights remain within handling limits. Mercury devices will be packaged in spill-proof containers, maintained intact, and segregated by device type for recycling.

Lead Waste Handling

Lead waste handling emphasizes the recycling of valuable metal components while ensuring proper management of building materials. Lead sheets, liners, and other metal components will be staged separately and packaged by metal type and grade for recycling. All recyclable materials will be properly labeled, with weights and quantities tracked throughout the process. Comprehensive documentation will maintain chain of custody through recycling facility receipt.

Building materials requiring TCLP testing will be packaged separately and clearly labeled pending results. Materials testing below regulatory limits will be managed as construction debris, while any materials exceeding limits will follow hazardous waste protocols. All disposal decisions will be thoroughly documented with proper shipping records maintained.

Hazardous Waste Handling

Hazardous waste handling procedures address the management of liquid chemicals, 162 gallons of BIOTRIL 12.5, 15 gallons of Oxidizer 5.1, and various laboratory chemicals throughout the facility. All materials will be packaged in DOT-approved containers with proper segregation maintained. Containers will be labeled according to regulations with hazardous waste manifests completed for each shipment.

BIOTRIL 12.5 and Oxidizer 5.1 require specific attention to container compatibility and proper segregation. Laboratory chemicals will be sorted by hazard class with compatible materials packaged together. All containers will be properly labeled with accumulation dates tracked and material compatibility maintained in staging areas.

Quality control measures will verify proper packaging, container integrity, and labeling throughout the waste handling process. Regular inspections of storage areas will be documented, with comprehensive records maintained for all shipping and disposal activities. All waste handling operations will be conducted by properly trained personnel using appropriate personal protective equipment.

G. Air Monitoring Requirements

Transite and Encapsulated Material Air Monitoring

Personal air monitoring will be conducted periodically during intact removal operations to document exposure levels. Area air samples will be collected on a daily basis in active work zones to verify materials remain intact during removal and handling. Additional sampling will be performed if materials become damaged or work practices change. Since these materials remain intact, clearance sampling is not required when proper work practices are maintained.

Non-Friable Material Air Monitoring

Personal air samples will be collected during non-friable material removal to document exposure levels remain below regulatory limits. Area air monitoring will be performed in the work area to verify materials remain non-friable during removal. Additional sampling will be conducted if materials become damaged or work practices change. Personal sampling results will be used to verify adequacy of respiratory protection and work practices.

Full Containment/Friable Material Air Monitoring

Personal air monitoring will be conducted daily on workers inside containment to verify exposure levels remain below OSHA permissible exposure limits. Area air samples will be collected inside containment to evaluate work practices and engineering controls. Perimeter air samples will be taken outside containment to verify containment integrity. Final clearance air sampling will utilize aggressive air sampling techniques with minimum five samples per containment area. All samples will be analyzed by phase contrast microscopy or transmission electron microscopy as required by regulations. Written documentation will be maintained for all air sampling results.

Glovebag Operations Air Monitoring

Personal air monitoring will be conducted on workers performing glovebag removal to document exposure levels. Area air samples will be collected in the immediate work area to verify proper work practices. Samples will be taken for each distinct work area or at least one sample per twenty glovebags, whichever is more frequent. Additional sampling will be performed if there are any glovebag failures or changes in work conditions. Daily personal sampling results will be used to verify respiratory protection requirements.

7. SAFETY AND HEALTH

A. Personal Protective Equipment

Safety Requirements and Training All workers will be provided with appropriate personal protective equipment (PPE) specific to asbestos abatement and hazardous material removal operations. Comprehensive training in proper PPE use, decontamination procedures, and equipment limitations will be conducted before any abatement activities begin. Daily inspections of all PPE will be performed and documented, with any equipment showing signs of wear or damage immediately removed from service. Only equipment in good condition will be permitted for use during abatement activities.

Required Personal Protective Equipment

Basic PPE Requirements for All Abatement Activities

- ANSI Z89.2 compliant hard hats
- ANSI Z87.1 compliant safety glasses with side shields
- ANSI Z41.2 compliant work boots (rubber boots for wet removal)
- Cut-resistant gloves for general abatement work and Chemical resistant when working with chemicals.
- Disposable coveralls with hood and booties

Respiratory Protection and Exposure Assessment Respiratory protection requirements may be modified based on negative exposure assessments (NEA) for specific tasks. Where historical data and current air monitoring demonstrate exposure levels consistently below OSHA permissible exposure limits, reduced respiratory protection may be implemented. However, the following baseline requirements apply unless an NEA indicates otherwise:

- Full-face air-purifying respirators with P100 HEPA filters for friable material removal
- Half-face respirators with P100 filters for non-friable removal operations
- Powered Air Purifying Respirators (PAPR) for high-risk activities

All respiratory protection decisions will be documented and supported by exposure monitoring data. NEAs will be task-specific and regularly validated through ongoing air monitoring. Any change in work conditions or methods will trigger a reassessment of respiratory protection requirements.

Selection of respiratory protection will be based on exposure levels and work activities according to the following criteria:

Maximum Use Concentration Guidelines:

- Half-Face Air-Purifying with HEPA Filters: 0.1 f/cc
- Full-Face Air-Purifying with HEPA Filters: 0.5 f/cc

- Powered Air-Purifying (PAPR) Full-Face with HEPA Filter: 10 f/cc
- Full-Face Supplied Air, Pressure Demand + HEPA Escape: 100 f/cc

Note: Maximum Use Concentration represents the maximum fiber concentration outside the respirator to maintain exposure inside the respirator below 0.01 f/cc.

Task-Specific Protection

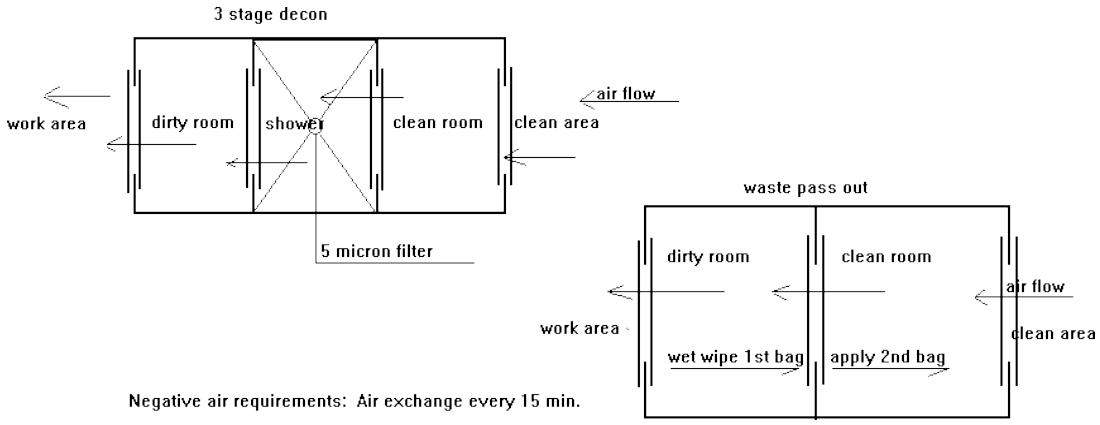
- Additional chemical-resistant coveralls for wet removal
- Face shields during pressure washing or encapsulant application.
- Hearing protection during mechanical removal operations
- Cut-resistant gloves during material handling.
- Knee pads for floor tile removal operations

All PPE will be donned and doffed within the decontamination unit following proper procedures. Disposable items will be properly disposed of as contaminated waste, and reusable equipment will be thoroughly cleaned and inspected after each use. PPE requirements will be continuously evaluated based on air monitoring results and work conditions.

B. Decontamination Facilities

The decontamination unit provides a controlled transition between contaminated work areas and clean areas through a three-stage system. The unit consists of a clean room, shower room, and equipment room arranged in sequence. The clean room serves as the entry point from the uncontaminated area, where workers prepare for entering the work area. The shower room provides a cleaning station between the clean and contaminated zones, ensuring proper decontamination of personnel. The equipment room functions as the final chamber between the shower and the work area, where contaminated protective equipment is managed.

The waste decontamination unit operates as a separate two-stage system for removing contaminated materials from the work area. This unit consists of a washroom where waste containers are cleaned and a holding area where decontaminated containers are staged for transport. This configuration prevents cross-contamination during waste removal while maintaining containment integrity.



A decontamination unit will be attached to each NPE (Negative Pressure Enclosure) (with exception to non-friable regulated areas); these areas will utilize a remote decontamination facility. Each decontamination unit will consist of 3 stages: Clean Room, Shower and Equipment Room.

1. Clean Room: Workers will don personal protective equipment such as Tyvek, Rubber Steel Toed Boots and Respirators. Each worker will be assigned a box or locker for personal effects.
2. Shower: The shower will have hot and cold running water. All water used for showering will be bagged and disposed of as asbestos containing material. Each employee will thoroughly shower and wash their respirator prior to entering the clean room.
3. Dirty Room: When leaving the NPE workers will store their tools and remove their dirty PPE inside the Dirty Room prior to entering the shower. The Dirty Room may also be used to store dirty tools and equipment between shifts.

C. Emergency Procedures

Medical Emergencies Inside Containment Areas Requiring Immediate Response If a worker becomes injured or ill within a containment area, immediate assessment and action are required. The severity of the medical situation must be quickly evaluated against the risks of emergency decontamination bypass:

- Work will stop immediately.
- Supervisor will assess if person can be safely decontaminated.
- If immediate evacuation is necessary, cut containment for direct exit.
- Provide necessary first aid.
- Contact emergency services if required.
- Document incident including containment breach if occurred.

Fire or Smoke Conditions Requiring Emergency Containment Evacuation The presence of fire or smoke creates an immediate life-safety hazard requiring rapid response and evacuation while maintaining awareness of potential asbestos fiber release:

- Stop all work immediately.
- Turn off all negative air units.
- Evacuate containment through nearest exit.
- If time permits, proceed through decontamination unit.
- If immediate evacuation required, cut containment for direct exit.
- Account for all personnel at designated assembly point
- Contact fire department.
- Secure area to prevent unauthorized access.

Critical Loss of Negative Air Pressure Within Containment Areas Loss of negative pressure creates potential for fiber release outside containment requiring immediate work stoppage and assessment:

- Stop removal activities immediately.
- Keep materials wet.
- Check negative air machines.
- Verify all backup units are functioning.
- If pressure cannot be restored, seal all ACM and exit containment.
- Do not resume work until negative pressure is re-established.

Complete Power Failure Affecting Containment Systems and Equipment Power loss impacts critical containment systems requiring orderly work stoppage and containment security measures:

- Stop work immediately.
- Keep materials wet.
- Exit containment through decontamination unit using emergency lighting.
- Verify operation of backup power systems if available
- Secure containment entry points
- No re-entry until power is restored.

Containment Breach Requiring Immediate Repair and Assessment Physical damage to containment barriers requires immediate action to prevent fiber release and maintain containment integrity:

- Stop work immediately.
- Keep materials wet.
- Use emergency repair materials to seal beach.
- Conduct air monitoring outside breach area.
- Document incident and repair measures
- Verify containment integrity before resuming work.

All emergency procedures will be reviewed during daily safety meetings. Emergency contact information and evacuation routes will be clearly posted at all entrances and inside clean rooms. Regular emergency response drills will be conducted to ensure all personnel understand and can execute these procedures effectively. Additional emergency equipment including first aid kits, emergency repair materials, and communication devices will be maintained in readily accessible locations.

D. Medical Monitoring

NorthStar will maintain a comprehensive medical surveillance program for all employees involved in hazardous materials abatement activities at the Baptist Hospital complex. This program ensures compliance with OSHA regulations including 29 CFR 1926.1101 (asbestos) and 29 CFR 1926.62 (lead).

Initial Medical Examinations

All personnel must complete a pre-assignment medical examination before beginning work on the project. These examinations will include:

- Detailed medical and occupational history.
- Physical examination with emphasis on respiratory system
- Pulmonary function tests (FVC and FEV1)
- Chest X-ray interpreted by B-reader.
- Blood led level testing for lead-related work.
- Additional tests deemed necessary by examining physician.

Periodic Medical Examinations

Workers will receive annual medical examinations including:

- Updated medical and occupational history.
- Physical examination focusing on respiratory system.
- Pulmonary function testing
- Blood led monitoring for lead workers.
- Chest X-ray at frequency determined by examining physician.
- Review of respirator use and fitness.

Emergency Medical Examinations

Additional medical examinations will be provided:

- If worker develops signs/symptoms of exposure
- When exposure monitoring reveals elevated levels
- In event of emergency potentially affecting health
- Upon termination of employment

Medical Records Maintenance

Records of all medical examinations will be maintained for duration of employment plus 30 years, including:

- Name and social security number
- Physician's written opinions
- Employee medical complaints
- Examination results and test findings
- Any recommended limitations
- Employee notification of results

Heat Stress Monitoring

Given Florida's climate conditions, additional monitoring includes:

- Regular vital signs monitoring during hot conditions.
- Work/rest schedules adjusted for temperature/humidity.
- Hydration stations in clean rooms
- Heat stress training for all workers
- Documentation of monitoring results

Physician Review and Approval

The examining physician will provide written opinion including:

- Any detected medical conditions
- Recommended work restrictions.
- Fitness for respirator use
- Results of lead testing if applicable
- Statement of examination adequacy

Employee Notification

Workers will receive:

- Copies of physician's written opinions
- Explanation of examination results
- Notification of any work restrictions
- Confidential access to complete medical records
- Annual updates on examination findings

This medical monitoring program will be continuously evaluated and updated based on exposure monitoring results and site conditions. All medical surveillance activities will be coordinated through NorthStar's occupational health provider, with records maintained at the corporate office while copies of current certifications are kept on-site.

E. Site Security

NorthStar will implement and maintain strict site security measures throughout all abatement and remediation activities to ensure the safety of workers, prevent unauthorized access, and maintain containment integrity. The following comprehensive security protocols will be enforced throughout the project duration.

Access Control

All personnel entering abatement work areas must sign in and out at the site office. Access to regulated areas will be strictly limited to workers who possess current asbestos certifications, medical clearances, and have completed site-specific training. Visitors requiring access to regulated areas must receive prior authorization from the Project Manager and provide documentation including proof of asbestos worker/supervisor certification, medical qualification to wear respirators, and current respirator fit testing records. All visitors must be always escorted by authorized site personnel while in regulated areas.

Work Area Security

Work areas will be clearly identified with OSHA-required warning signs posted in both English and Spanish at all approaches to regulated areas. All active abatement zones will be secured using a combination of barrier tape and hard barricades as appropriate for the specific hazards present. Containment areas will be maintained under continuous negative pressure monitoring to ensure isolation from surrounding areas. All entrances to containment areas will be secured when not in active use, and waste containers and storage areas will be locked at the end of each shift. Decontamination units will be positioned in secure, controlled-access locations to maintain containment integrity.

Perimeter Control

Secure equipment and material staging areas will be established within designated zones of the project site. High-risk abatement areas will be surrounded by additional construction fencing to provide an extra layer of security. Restricted zones will be marked with danger barricade tape and required warning signage. All barricaded areas will be tagged with contact information for authorized personnel who can grant access when needed. Only vehicles specifically authorized by NorthStar will be allowed in material storage and waste collection areas.

After-Hours Security

At the end of each shift, all containment areas, decontamination facilities, and waste storage locations will be locked and secured. The Site Safety Officer will verify that negative pressure systems and monitoring equipment remain operational. Perimeter checks of all work areas will be conducted at the end of each shift to ensure security measures are in place. A contact list of key personnel for emergency response will be maintained and readily available. Security contact information will be prominently posted at the site entrance and project office.

Documentation

The project team will maintain comprehensive security documentation including daily security inspection logs, records of all personnel entering regulated areas, and documentation of any security incidents or unauthorized access attempts. Visitor logs will be kept with verification of all required certifications. A detailed inventory of keys and locks for restricted areas will be maintained by the Site Safety Officer and or the Site Superintendent.

The Site Safety Officer and Project Manager will conduct regular evaluations of all security measures to assess their effectiveness. Additional controls will be implemented as needed based on these evaluations to ensure the continued safety and security of all abatement operations. Any security breaches or incidents will be immediately investigated and documented, with corrective actions implemented as necessary.

4. QUALITY CONTROL

A. Inspection Procedures

NorthStar's inspection procedures will encompass a multi-tiered approach to ensure compliance and quality control throughout all phases of abatement and remediation work. The Site Superintendent and Site Supervisor will conduct daily visual inspections of all work areas to verify proper containment setup, negative air pressure maintenance, decontamination facility operation, and worker protection measures. These inspections will include verification of proper signage, barriers, and security protocols.

Professional Service Industries, Inc. (PSI), serving as the project's third-party industrial hygiene consultant, will provide comprehensive oversight inspection services throughout the project. PSI's certified industrial hygienists will conduct regular inspections of work areas to verify compliance with regulatory requirements and project specifications. Their inspections will include monitoring of engineering controls, reviewing worker protection measures, and verifying proper work practices. PSI will also be responsible for conducting and documenting all required air monitoring during abatement activities and performing the final visual inspections and clearance air testing of all containment areas.

All containment areas will undergo thorough visual inspections by both NorthStar supervision and PSI representatives following the completion of abatement activities and prior to clearance testing. These inspections will be documented using standardized forms that detail the specific areas inspected, any deficiencies identified, and corrective actions taken. PSI will complete the Certification of Visual Inspection form as required by regulations before proceeding with clearance air sampling.

The inspection process will include assessment of engineering controls, personal protective equipment usage, waste handling procedures, and decontamination practices. Any deficiencies identified during inspections by either NorthStar or PSI personnel will be

immediately addressed and documented through completion. Critical inspection points will include pre-abatement containment verification, post-abatement visual clearance, and waste packaging compliance checks.

The Site Superintendent will maintain a master log of all inspections, findings, and corrective actions for the duration of the project, including all documentation provided by PSI regarding their oversight inspections, air monitoring results, and clearance testing reports.

B. Documentation Requirements

NorthStar will maintain comprehensive documentation throughout all phases of the abatement project to ensure regulatory compliance and provide a complete record of all activities. Daily documentation will include detailed work logs recording all abatement activities, personnel on site, equipment used, and materials removed. These logs will be maintained by the Site Supervisor and reviewed daily by the Project Manager.

The master daily log will provide a thorough record of site operations, documenting all personnel present and their work locations, weather conditions affecting work activities, equipment usage and operational status, and quantities of materials removed. Any incidents, accidents, or injuries will be thoroughly documented, along with records of all site visitors and their purpose. The log will also track results of daily pressure differential monitoring and any deviations from established work plan procedures.

Personnel documentation will be maintained for all workers, including current asbestos certifications and licenses, medical surveillance records, respirator fit test documentation, and verification of site-specific training completion. Daily sign-in/sign-out logs will track all personnel movements through regulated areas. These records will be regularly audited to ensure all personnel maintaining required certifications and medical clearances.

PSI will provide comprehensive air monitoring documentation throughout the project. This will include results of daily personal air sampling, area air monitoring data, containment pressure differential recordings, and final clearance sampling results. All air monitoring documentation will include proper chain of custody records and laboratory analytical reports. These records will be maintained to demonstrate ongoing compliance with exposure limits and final clearance criteria.

Waste handling operations will be thoroughly documented through a system of waste manifests, shipping papers, scale tickets, and disposal receipts. Container inspection logs will verify proper packaging and labeling, while transportation logs will document proper handling during transit. Any required waste characterization testing, such as TCLP analysis, will be properly documented and maintained with the disposal records.

A comprehensive system of inspection and certification records will be maintained throughout the project. This will include daily work area inspection reports, engineering

control inspection logs, equipment maintenance records, and containment inspection documentation. PSI's visual inspection certifications will be maintained as part of this record, along with documentation verifying the integrity of critical barriers and engineering controls.

Safety documentation will encompass daily safety meeting logs, job safety analysis records, safety inspection documentation, and any necessary accident or incident reports. All corrective actions taken in response to safety concerns will be thoroughly documented, including verification of implementation and effectiveness.

Project closeout documentation will provide a complete record of the project's successful completion, including final visual inspection certifications, clearance air sampling results, completed waste manifests with disposal facility signatures, and final equipment decontamination certifications. All regulatory notifications and correspondence will be included in the closeout package.

All project documentation will be maintained in an organized manner at the project office and available for review by the owner, regulatory agencies, and PSI representatives. Electronic copies will be maintained as backup to ensure preservation of all critical records. In accordance with regulatory requirements, documentation will be retained for a minimum of 30 years after project completion. The Project Manager will ensure all required documentation is properly completed, filed, and included in the final project closeout submittal.

C. Clearance Criteria

The clearance process will follow a systematic approach to ensure all abated areas meet or exceed regulatory requirements and project specifications before containment removal and area reoccupancy. Initial clearance evaluations will begin with a thorough visual inspection conducted by both NorthStar supervision and PSI representatives to verify the complete removal of all specified materials and the absence of any visible debris, residue, or dust. The PSI industrial hygienist must confirm through written documentation that the visual inspection has been passed before proceeding with clearance air sampling.

Clearance air sampling will be conducted in all interior work areas following successful visual inspection. The acceptance criteria for clearance will be airborne fiber concentrations less than or equal to 0.01 fibers per cubic centimeter (f/cc) using phase contrast microscopy (PCM) analysis. PSI will collect a minimum of two final air samples inside each work area, with approximately 2,000 liters of air sampled at a flow rate of less than 16 liters per minute for PCM analysis using NIOSH 7400 methodology.

If initial clearance sampling results exceed 0.01 f/cc, NorthStar will conduct additional cleaning of the area at no additional cost to the Owner. The process of cleaning and clearance sampling will be repeated until acceptable results below 0.01 f/cc are achieved.

Upon receipt of passing clearance results, PSI will provide written documentation verifying that the area has met all clearance criteria and is suitable for containment removal.

Following successful clearance, containment materials will be carefully removed in a manner that prevents contamination of the cleared area. If any debris or residual contamination is identified during containment removal, work will stop immediately, and the affected area will require recleaning and retesting. PSI will verify and document that all containment materials have been properly removed and the area is suitable for occupancy.

All clearance documentation, including visual inspection certifications, air sampling results, laboratory analysis reports, and chain of custody records will be maintained in the project files and included in the final closeout documentation. This documentation will provide a complete record demonstrating that all areas have met the required clearance criteria before being released for subsequent work activities.

D. Record Keeping

NorthStar will maintain complete and accurate records throughout the duration of the project in accordance with applicable federal, state, and local regulations. Project documentation will be organized and readily accessible at the project site office for review by the Owner, regulatory agencies, and PSI representatives. The Site Superintendent will establish a filing system that ensures proper organization and retention of all required records.

Daily project records will be maintained documenting all site activities, including worker documentation, air monitoring results, work area inspections, and waste disposal records. These daily records will include detailed descriptions of work performed, areas worked, personnel on site, equipment used, materials removed, and any incidents or unusual occurrences. PSI's daily air monitoring results will be incorporated into the project records as received, including personal samples, area samples, and final clearance results.

Worker documentation will be maintained on site including current certifications, training records, medical surveillance documentation, and respirator fit test results. Daily sign-in sheets will record all personnel entering regulated work areas, including workers, supervisors, and authorized visitors. These records will verify that all personnel working in regulated areas maintain current qualifications and proper training.

Waste shipment records will be maintained from point of generation through final disposal. This includes waste manifests, weight tickets, and disposal facility receipts. Each manifest will be tracked through a log system until the return copy is received from the disposal facility, confirming proper disposal. Transportation logs will document proper handling and routing of waste shipments.

Air monitoring records provided by PSI will be maintained in chronological order, including all personal samples, area samples, and clearance testing results. These records will include sampling data sheets, chain of custody documentation, laboratory analysis reports, and

Records will be retained in secure storage for a minimum of 30 years following project completion, as required by regulations. The Project Manager will prepare and maintain a comprehensive index of all project records to facilitate future retrieval if needed. Upon project completion, records will be organized and transferred to permanent storage in accordance with regulatory requirements.

5. WASTE MANAGEMENT

A. Packaging Requirements

All asbestos-containing and contaminated materials will be properly packaged to ensure safe handling and transportation to approved disposal facilities. Asbestos-containing waste materials must be double-bagged or wrapped in two layers of 6-mil polyethylene sheeting to yield a minimum covering of 12-mils. Each layer will be independently sealed using the "goose-neck" method and duct tape. For large components or quantities of materials, sealed 6-mil polyethylene packages may be placed inside fiberboard drums or other suitable rigid containers for additional protection during transport.

For efficient bulk waste handling, cubic yard boxes double-lined with 6-mil polyethylene sheeting may be used within the work area. These boxes will be placed on pallets to facilitate safe movement. As materials are added to the bulk containers, care will be taken to prevent tears or damage to the polyethylene liners. Once a box is full, both layers of polyethylene will be independently sealed using the "goose-neck" method and secured with duct tape before the box is closed. The sealed and palleted boxes will then be moved through the waste decontamination unit before being transferred to the designated waste storage area.

For larger non-friable materials such as transite exterior paneling, roll-off containers double-lined with 6-mil polyethylene sheeting will be utilized. These materials will be carefully placed into the lined container to prevent breakage and fiber release. When the container is full, both layers of polyethylene will be pulled over the top of the waste materials and sealed to create a large, completely enclosed package. This method allows for safe and efficient handling of bulk non-friable materials while maintaining proper containment throughout transportation and disposal.

All waste containers will be properly labeled in accordance with OSHA, EPA, and DOT requirements. Labels must include appropriate warning text in English and Spanish including "DANGER - CONTAINS ASBESTOS FIBERS - AVOID CREATING DUST - CANCER AND LUNG DISEASE HAZARD" as well as the name of the waste generator and location where the waste was generated. The RQ Hazardous Class 9 placard will be displayed on transport vehicles during loading and unloading operations.

Non-friable materials such as floor tiles, transite panels, and intact ceiling tiles will be kept adequately wet during packaging. These materials will be wrapped in two layers of 6-mil polyethylene sheeting or placed in double 6-mil disposal bags. Any sharp edges or corners must be padded to prevent puncturing of the containment packaging. Regulated asbestos-containing material (RACM) that is friable or has become friable during removal will be thoroughly wetted and immediately bagged or wrapped to prevent fiber release.

For materials that may puncture standard polyethylene packaging, such as pipe sections or other rigid components, additional protective covering or containerization will be required. These items will be wrapped in protective padding material prior to being sealed in double layers of 6-mil polyethylene. Alternatively, they may be placed directly into fiber drums or other rigid containers lined with two layers of 6-mil polyethylene.

All packaged waste will be inspected prior to removal from the work area to ensure proper containment and labeling. Any damaged containers will be repaired or repackaged before being moved through the waste decontamination unit. The exterior of all waste packages will be wet-wiped, or HEPA vacuumed in the waste decontamination unit before being moved to the designated waste storage area.

B. Storage Procedures

All packaged asbestos-containing materials and contaminated waste will be temporarily stored in a designated secure area prior to transportation to approved disposal facilities. At the Baptist Hospital complex, the primary waste storage area will be established in the northwest laydown yard, with controlled access and protection from weather conditions. This area will be clearly marked with required warning signs in English and Spanish and secured to prevent unauthorized access. Only properly packaged and labeled materials that have been decontaminated will be moved to the storage area.

Roll-off containers used for bulk waste storage will be properly lined, covered, and secured when not actively being loaded. These containers will be positioned on the existing paved areas of the laydown yard to provide stable support and adequate access for loading and transportation vehicles. The existing security fencing around the laydown yard will be maintained and supplemented as needed to ensure controlled access to the waste storage area.

Packaged materials in cubic yard boxes and drums will be stored on pallets to prevent contact with the ground and facilitate inspection and loading. Storage areas will be inspected daily to verify container integrity and proper labeling. Any damaged containers will be promptly repaired or repackaged. The area will be kept orderly with clear access aisles maintained between stored materials.

Universal waste materials including fluorescent lamps, light ballasts, mercury-containing equipment, and batteries will be stored in a dedicated section of the waste storage area, separately from asbestos materials. Lamps will be stored in proper containers designed to prevent breakage, while ballasts will be segregated based on PCB content. Mercury-containing devices will be stored in spill-proof containers with proper cushioning to prevent damage. All universal waste containers will be clearly labeled with contents and accumulation start dates. Given the extensive quantity of universal waste expected from the hospital complex, storage areas will be organized by building section to maintain proper material tracking.

A covered storage area within the existing hospital warehouse will be utilized for temperature-sensitive universal waste components and electronics requiring weather protection. This area will be secured and accessible only to authorized personnel, with proper ventilation maintained. Containers will be arranged to allow for regular inspections and inventory tracking.

The storage area will be equipped with appropriate spill control supplies including extra polyethylene sheeting, duct tape, and HEPA vacuums in case emergency repackaging is required. Mercury spill kits will be maintained in universal waste storage areas. A log will be maintained documenting all materials placed into and removed from the storage area, including dates, quantities, and types of materials.

No asbestos-containing materials or universal waste will be stored at the site for longer than necessary before transport to the disposal facility. The Project Manager will coordinate waste shipments to ensure regular removal of accumulated materials. At the end of each workday, all stored materials will be verified secure and properly protected from weather conditions. The existing site drainage patterns in the laydown yard will be maintained to prevent water accumulation around stored materials.

C. Transportation

All transportation of regulated materials from the Baptist Hospital complex will be conducted in strict accordance with federal, state, and local regulations. Republic Services of Pensacola will serve as the primary transporter for asbestos-containing materials and universal waste. All asbestos waste transport vehicles will be properly marked with RQ Hazardous Class 9 placards during loading and unloading operations in accordance with DOT requirements. Warning signs stating "DANGER - ASBESTOS DUST HAZARD - CANCER AND LUNG DISEASE HAZARD - Authorized Personnel Only" will be displayed during loading and unloading of asbestos materials.

Vehicles used for transporting asbestos-containing materials will have completely enclosed, lockable storage compartments. These compartments will be lined with a minimum of one layer of 6-mil polyethylene on the sides and top and two layers on the floor. Each

compartment will be thoroughly wet cleaned, and HEPA vacuumed following the disposal of each load at the dump site. At the conclusion of the project, all transport vehicle compartments will have the polyethylene lining properly removed and disposed of as contaminated waste, followed by a final wet cleaning and HEPA vacuuming before being returned to service.

Republic Services will provide roll-off containers for bulk transport of non-friable materials such as transite panels. These containers will be inspected before use to verify proper condition and cleaned between loads. All bulk loads will be completely enclosed within the double-lined container and properly covered during transport. Transportation routes will be established to minimize travel through congested areas while complying with local requirements.

Universal waste transportation will also be handled by Republic Services, utilizing properly permitted vehicles and containers appropriate for the specific materials being transported. Fluorescent lamps will be transported in containers designed to prevent breakage, while ballasts and mercury-containing equipment will be secured to prevent shifting during transport. All universal waste containers will maintain proper labeling throughout transportation.

A licensed hazardous waste transporter (to be determined) will handle the transportation of any hazardous waste materials, including lead-containing components and any chemicals requiring disposal. The hazardous waste transporter will provide appropriate documentation of permits and registrations prior to conducting any transport activities.

Transportation documentation will include:

- Waste shipment records for all asbestos materials
- Universal waste shipping papers
- Hazardous waste manifests as required.
- Weight tickets and scale records
- Vehicle inspection logs
- Transportation route documentation

The Project Manager will maintain copies of all transportation records and verify proper completion of all required documentation. Chain of custody will be maintained throughout the transportation process, with all waste shipment records and manifests tracked until return receipt from the disposal facility is received.

D. Disposal Site Information

The following disposal facilities have been identified and approved for receiving waste materials from the Baptist Hospital complex abatement project. All facilities have been selected based on their proximity to Pensacola, Florida, acceptance criteria matching the project waste streams, and demonstrated compliance with regulatory requirements.

Asbestos-Containing Material Disposal (Primary)

Primary ACM Landfill

Escambia County Perdido Landfill - Permitted Class I and II landfill in Florida.
13009 Beulah Rd, Cantonment FL 32533
EPA ID # FLD982120131 Permit # 0000667-038-SO-01
Ryan Cummins (850) 937-2152

Accepted Materials:

- Category I non-friable materials (345,089 SF total):
  - Floor tile and mastic
  - Transite panels from Towers 1 and 2
  - Roofing materials
- Category II non-friable materials (79,250 SF total):
  - Sink undercoating.
  - Duct/pipe insulation with ACM mastic
  - Window glazing and caulking.
- RACM friable materials (9,128 units total):
  - Pipe insulation from crawlspaces and tunnels
  - Boiler/tank insulation
  - Fire doors

Special Requirements:

- 24-hour advance notice required for large loads
- Waste profile and characterization required before first shipment.
- Special handling procedures for friable RACM loads.
- Specific packaging requirements for different ACM categories

Asbestos-Containing Material Disposal (Secondary)

Secondary ACM Landfill

Timberlands Sanitary Landfill
22800 AL-41, Brewton, AL 3
Robert Milstead (251) 255-6276
EPA ID # AL000034520-431 Permit # 27-08

Universal Waste Disposal/Recycling

Lamp and Ballast Recycling Facility

Universal Recycling Technologies, LLC (URT)
2645 Sylvania Cross Dr., Fort Worth, TX 76137
Lisa Bailey / Sr. Compliance Specialist (607) 321-9601
EPA ID TXR000086069

Accepted Materials:

- Fluorescent lamps (44,072 total units)
- PCB/Non-PCB ballasts (21,538 total units)
- Mercury-containing equipment
- Batteries from emergency systems

Requirements:

- Specific packaging requirements for intact lamps
- Separate containers required for PCB vs. non-PCB ballasts
- Operating Hours: (Insert hours)
- Bulk drop-off procedures for large quantities
- (List any facility-specific requirements for Baptist Hospital project)

Hazardous Waste Disposal (Primary)

Primary Hazardous Waste Facility

Emelle Hazardous Waste Facility
36964 AL-17 North, Emelle, AL 35459
Holly Gordon (251-583-0010
EPA ID ALD000622464 Permit # 412-X001-X003, X005-X010

Accepted Materials:

- All Hazardous waste determined through TCLP tests

Requirements:

- TCLP testing required for waste characterization.
- Specific packaging requirements for different lead waste types
- Advanced scheduling required for bulk materials.

Accepted Materials:

- BIOTRIL 12.5 (162 gallons)
- Oxidizer 5.1 (15 gallons)
- Other chemical wastes from laboratory areas

- Any materials failing TCLP testing.

Requirements:

- Waste profile and characterization required before acceptance.
- Lab pack requirements for chemical wastes
- Specific packaging and labeling requirements
- Advanced scheduling required for all deliveries.

Transportation Requirements:

- Avoidance of school zones during operating hours
- Compliance with City of Pensacola transportation requirements
- Use of covered trucks for all waste types
- Specific manifesting requirements for each waste category

Documentation Requirements:

- Waste shipment records for all ACM
- Hazardous waste manifests as required.
- Weight tickets for all loads

Hazardous Waste Disposal (Secondary)

Secondary Hazardous Waste Facility

Bellview Michigan
49350 N Interstate 94 Services Drive, Van Buren Twp MI 48111
Kim Anderson (334) 614-2910
EPA ID # MID 000 724 831 (Treatment)

The Project Manager will maintain copies of all facility permits, waste acceptance criteria, and disposal documentation in the project files. Any changes in disposal facilities during the project will require prior approval from the City of Pensacola and updated documentation of facility permits and acceptance criteria. Regular coordination with each facility will be maintained to ensure compliance with all acceptance requirements and scheduling procedures.

E. Documentation

Comprehensive documentation will be maintained throughout the Baptist Hospital abatement project to ensure regulatory compliance and provide complete tracking of all waste streams from generation through final disposal. This documentation system encompasses specific requirements for each type of waste material while maintaining standardized protocols for record keeping and verification.

For asbestos-containing materials, Waste Shipment Records (WSR) will be generated for each load transported from the site. These records will detail the specific types and quantities of materials, including the 345,089 square feet of Category I non-friable materials, 79,250 square feet of Category II non-friable materials, and 9,128 units of RACM friable materials identified throughout the hospital complex. Each WSR will include complete generator information specific to the Baptist Hospital site, transporter details for Republic Services, and disposal facility information. The Project Manager will ensure proper distribution of WSR copies to the disposal facility, project site files and City of Pensacola,

Daily transportation logs will track all waste shipments leaving the site, recording departure times, vehicle information, driver details, load contents, and disposal facility arrival times. These logs will maintain particular focus on approved transportation routes through Pensacola, ensuring compliance with local requirements while documenting the movement of all waste materials from the hospital complex.

Lead waste documentation will center on hazardous waste manifests for the materials that fail TCLP testing. These manifests will include comprehensive waste descriptions, appropriate waste codes, and quantities in proper units. Supporting documentation will include detailed TCLP test results for the of painted surfaces, architectural components, and any demolition debris requiring characterization. Laboratory analysis reports and chain of custody records will be maintained to verify proper waste characterization throughout the project.

The substantial quantity of universal waste from the hospital requires detailed shipping papers for the 44,072 fluorescent lamps and 21,538 light ballasts, as well as batteries and mercury-containing devices. These documents will track materials from their points of generation within specific hospital buildings through final recycling or disposal. Inventory tracking logs will be maintained separately for each universal waste type, with regular inspections documented for accumulation areas and container conditions.

Hazardous materials documentation will focus on proper manifesting of the 162 gallons of BIOTRIL 12.5, 15 gallons of Oxidizer 5.1, and various laboratory chemicals identified throughout the facility. These records will include all required DOT shipping information, hazard classifications, and emergency response procedures. Supporting documentation will include safety data sheets, chemical inventories, and detailed container content logs for all lab-packed materials.

The project team will maintain daily waste generation logs documenting all container inspections, scale tickets, and relevant photographs of packaging and loading operations. Any spills or incidents will be thoroughly documented with detailed reports and photographic evidence. Training records for all personnel involved in waste handling operations will be kept current and readily available for inspection.

Regulatory compliance documentation will include copies of all required FDEP notifications, local permits, facility acceptance letters, and transporter licenses. Insurance certificates and additional regulatory correspondence will be maintained in dedicated files at the project office. Quality control documentation will track container inspections, packaging verification, load inspections, and decontamination activities throughout the project duration.
Active project files maintained at the site office will include pending WSRs and manifests, current inventory records, and emergency response information. These files will be organized to allow quick access to critical documentation while ensuring complete record keeping for all waste management activities. The Project Manager will conduct monthly audits to verify proper maintenance of all required records.

Upon project completion, a comprehensive documentation package will be assembled including copies of all WSRs with disposal facility signatures, complete manifest records, final weight summaries, and facility certificates of disposal. All waste documentation will be retained for a minimum of 30 years, with electronic copies created and archived for long-term access. Records will be organized by waste type, building location, generation date, and disposal facility to facilitate future retrieval if needed.

Monthly summary reports will track waste quantities by type, disposal facility utilization, transportation compliance, and documentation completeness. The final project completion report will provide total waste quantities, a disposal facility summary, documentation verification, and a regulatory compliance statement. This report will include copies of all required records, providing a complete history of waste management activities throughout the Baptist Hospital abatement project.

All documentation will undergo review by the Project Manager before filing to ensure completeness and accuracy. Regular audits will verify proper maintenance of records throughout the project duration. The final documentation package will provide the City of Pensacola and regulatory agencies with a comprehensive record of all waste management activities conducted during the abatement and demolition of the Baptist Hospital complex.

6. PROJECT CLOSEOUT

A. Final Inspection Procedures

The final inspection process for the Baptist Hospital complex will implement a comprehensive, systematic approach designed to verify complete remediation of all hazardous materials while ensuring full regulatory compliance. Given the facility's extensive size and the complex nature of the abatement work, inspections will follow the established work sequence, beginning with Tower 3, proceeding through Towers 1 and 2, and concluding with the main hospital building.

Prior to PSI's formal inspections, NorthStar's Site Superintendent will conduct thorough pre-inspections of each area. These preliminary assessments will verify the complete removal of all identified asbestos-containing materials, proper cleanup of work areas and decontamination units, and removal of temporary containment systems. The Superintendent will confirm proper disposal of all contained materials and verify restoration of any surfaces or systems affected by abatement activities.

Following successful pre-inspection, PSI's industrial hygienists will perform detailed visual inspections of all abated areas. These inspections will focus on verifying the absence of any visible debris, dust, or residue, while confirming the complete removal of all specified materials. Inspectors will examine all surfaces to ensure proper cleaning and sealing, verifying the completion of any required repairs and the removal of all temporary systems.

The main hospital building presents unique inspection challenges due to its complex configuration and the extensive quantity of materials removed. Inspections will proceed methodically through each floor level, with particular attention paid to mechanical spaces, utility chases, and the extensive network of crawlspaces and tunnels containing piping systems. Areas above suspended ceilings, wall and floor penetrations, former medical imaging rooms, and equipment mounting locations will receive detailed examination to ensure complete material removal.

For areas involving lead material removal, TCLP testing will be conducted on representative samples to determine proper waste characterization and disposal requirements. Materials testing below hazardous waste thresholds (less than 5.0 mg/L lead) will be handled as standard construction debris. Only if TCLP results exceed the regulatory threshold will materials require handling and disposal as hazardous waste, necessitating additional inspection protocols. In such cases, inspections will verify the complete removal of lead-lined walls from radiological areas and proper disposal of all lead-painted components according to hazardous waste requirements. For materials testing below hazardous levels, standard construction debris removal protocols will be followed. Any encapsulated materials approved to remain in place will be thoroughly documented with detailed locations and conditions noted.

Universal waste inspections will confirm the complete removal of all fluorescent fixtures, bulbs, and ballasts throughout the facility. Inspectors will verify the collection of all batteries and mercury-containing devices, proper cleaning of lamp storage areas, and removal of all universal waste containers. Particular attention will focus on ensuring no fluorescent tubes or ballasts remain in any portion of the facility.

Hazardous materials inspections will verify complete removal of all identified chemicals, proper cleaning of storage areas, and disposal of all laboratory materials. Storage cabinets and containment areas will be examined to confirm proper decontamination, with all contaminated items properly disposed of according to regulatory requirements.

Throughout the inspection process, comprehensive documentation review will verify completion of all waste shipment records, air monitoring data, and clearance sample results. Required forms, disposal facility receipts, and photographic documentation will be examined to ensure complete project documentation. Areas failing inspection will require immediate corrective actions, additional cleaning as needed, and re-inspection after completion of remedial activities.

Final acceptance of each area will require written certification from PSI, supported by photographic documentation and clearance sample results. All punch list items must be completed to the satisfaction of both PSI and the owner's representative. The Project Manager will maintain a detailed inspection log documenting all inspection activities, findings, corrective actions, and final acceptance dates.

Upon successful completion of all inspections, a comprehensive final report will be prepared summarizing all inspection activities, documenting findings and corrections, and including photographic records and clearance certifications. This report will provide verification of regulatory compliance and serve as permanent documentation of the successful completion of all abatement activities at the Baptist Hospital complex.

B. Documentation Requirements

Comprehensive project closeout documentation for the Baptist Hospital abatement project will provide verifiable evidence of proper completion for all remediation activities. Given the complex nature of the project and multiple waste streams involved, documentation packages will be assembled systematically for each phase of work, maintaining clear organization by building section while ensuring complete coverage of all activities.

For asbestos abatement activities, documentation will encompass complete waste shipment records tracking the removal and disposal of all identified materials. This includes detailed records for the 345,089 square feet of Category I non-friable materials such as floor tiles and transite panels, 79,250 square feet of Category II non-friable materials including duct insulation and sink coatings, and 9,128 units of RACM friable materials comprising pipe insulation and boiler materials. Daily work logs will provide detailed accounts of removal activities, documenting specific areas worked, materials removed, worker information, engineering controls utilized, and air monitoring results. PSI will provide final visual inspection certifications and clearance air sampling results for each containment area, supported by laboratory analysis reports and photographic documentation.

Lead material documentation requirements will be determined by TCLP testing results. For materials testing above the regulatory threshold of 5.0 mg/L, full hazardous waste documentation including manifests, land disposal restriction forms, and treatment facility certifications will be maintained. Materials testing below this threshold will be documented as construction debris, with disposal receipts and transportation records maintained. In all cases, complete TCLP sampling documentation, chain of custody records, and analytical reports will be preserved, along with detailed records of material locations and quantities removed.

Universal waste removal will be documented through comprehensive shipping papers tracking the removal of 44,072 fluorescent bulbs, 21,538 light ballasts, and various batteries and mercury-containing devices. Records will include accumulation start dates, container inspection logs, storage area monitoring documentation, and recycling facility receipts. Inventory tracking logs will maintain detailed records of all universal waste components removed from each building section.

Documentation for hazardous materials will include complete manifests for the removal of 162 gallons of BIOTRIL 12.5, 15 gallons of Oxidizer 5.1, and various laboratory chemicals. Material characterization records, analytical reports, and container content logs will be maintained, along with storage area inspection records and disposal facility certifications. Transportation records will document proper handling and chain of custody throughout the disposal process.

Project summary documentation will provide a comprehensive overview of all remediation activities, including final inspection reports for each building section, written certifications from PSI, and regulatory compliance statements. Air monitoring summary reports, project completion photographs, and equipment decontamination records will document the successful completion of all work activities. Any incidents or emergency responses will be thoroughly documented, along with daily security logs and safety meeting records.

Submissions will include all closeout documentation, and final waste disposal summaries. All regulatory correspondence and permit closure documentation will be maintained, along with documentation verifying proper completion of all required activities.

Quality control documentation will encompass comprehensive inspection reports, corrective action records, and material testing results. Chain of custody records, laboratory certifications, and field-testing data will provide verification of proper sampling and analysis procedures throughout the project.

All documentation will be provided in both hard copy and electronic formats, organized systematically by building section and material type. Records will be indexed for easy reference and stored in accordance with regulatory retention requirements. The Project Manager will conduct a thorough review of all documentation to verify completeness before submission for final project closeout. This comprehensive documentation package will provide permanent verification of proper project completion while ensuring full regulatory compliance.

C. Record Retention

In accordance with OSHA regulations and Florida Department of Environmental Protection requirements, all documentation from the Baptist Hospital abatement project will be retained for a minimum of 30 years from the date of project completion. NorthStar will implement a comprehensive record retention system maintaining electronic copies of all project documentation to ensure long-term preservation and accessibility.

The scope of retained documentation encompasses all aspects of the abatement project, including complete waste shipment records for asbestos-containing materials, TCLP testing results for lead materials, universal waste shipping papers, and hazardous material manifests. Worker certifications, medical surveillance records, air monitoring data, and clearance testing results will be preserved along with daily work logs, inspection reports, and project photographs. Special attention will be given to documentation relating to medical areas, radiological spaces, and laboratory decommissioning to maintain complete records of these specialized abatement activities.

D. Post-Abatement Activities

Upon successful completion of all abatement activities at the Baptist Hospital complex, NorthStar will implement a comprehensive series of post-abatement procedures to ensure proper transition of the facility for subsequent demolition activities. This systematic approach encompasses all building sections, including the main hospital structure, three medical towers, and connecting areas, ensuring thorough preparation for the next phase of work.

The initial post-abatement phase focuses on final building preparation, requiring thorough verification that all abatement-related materials and equipment have been removed from the facility. This includes the systematic removal of all containment barriers, decontamination units, and temporary utilities, along with collection of any remaining equipment or supplies. All warning signs and barriers associated with abatement activities will be removed, followed by final cleaning of work areas to ensure the facility is properly prepared for demolition contractors.

Following material removal, each building section will undergo detailed structural assessment to identify any areas requiring attention before demolition. This evaluation includes inspection of areas where material removal may have affected structural elements, documentation of compromised surfaces requiring stabilization, and assessment of floor loading conditions. Particular attention will be given to evaluating exterior wall integrity following transite panel removal and documenting all utility termination points.

All building engineering systems will be verified as properly prepared for demolition activities. This includes confirmation of electrical system de-energization, verification of HVAC system preparations, and documentation of plumbing system drainage and capping. Elevator systems, fire suppression systems, and communication systems will be confirmed as properly deactivated and prepared for demolition.

All documentation will be verified as complete, emergency response protocols will be updated, and transition plans will be implemented as our Demolition crews begin to prepare structures to be demolished.

1.0 INTRODUCTION

PSI was retained by Northstar Contracting Group to perform a supplemental survey for suspect ACM at Baptist Hospital, located at 1000 West Moreno Street in Pensacola, Florida 32501.

At the client's direction, this project was limited to the drywall systems located throughout the ground floor level of the hospital, hereinafter referred to as the Project Area. The field work was conducted on February 11, 2025.

1.1 PURPOSE AND SCOPE OF SERVICES

The purpose of this survey was to provide general information for the Project Area regarding the presence, condition, and quantity of accessible and/or exposed friable and non-friable materials suspected to contain asbestos.

The survey of the Project Area was conducted in general accordance with the EPA AHERA and the NESHAP sampling guidelines to determine the presence and general locations of exposed and/or physically accessible suspect ACM.

Each suspect material was touched, where possible, to determine the friability of the material. Samples were obtained only from suspect ACM that were readily exposed and/or physically accessible during the survey and if the collection of the sample would not compromise the structural integrity of the material being sampled.

Samples were sent to the PSI NVLAP accredited laboratory located at 500 Poplar Street, in Pittsburg, PA, for analysis. Each sample underwent PLM analysis for detection of asbestos fibers in the building materials on a “positive stop” basis.

1.1.1 INFORMATION PROVIDED BY THE CLIENT

The following table lists the information provided for this survey.

Description of Material	Provider/Source	Date
Floor Plan	Northstar	02/10/25

1.2 AUTHORIZATION AND ACCESS

Authorization to perform the survey was given on February 8, 2025, by the receipt of a signed copy by PSI of PSI Proposal Number 0783-444508, between Northstar Contracting Group and PSI.

Access to the property was provided by the client. PSI was escorted by the client during the field work for this project.

1.3 LIMITATIONS

This asbestos survey was not intended to meet the requirements of the NESHAP for Asbestos renovation or demolition. The survey was limited to drywall sample locations that were determined by the client.

Roof systems were not included in the scope of this survey.

Exterior areas were not included in the scope of this survey.

Although PSI made an attempt to identify all areas of ACM, an exhaustive investigation of void spaces was not included in the scope of services for this project. There may exist conditions which were unable to be identified within the scope of this survey.

Inaccessible is defined as areas of the building that were locked, or where admittance was not permitted. It also includes areas/materials that could not be tested (sampled) without destruction of the structure or a portion of the structure, and areas/materials that could not be safely reached by the inspector or inspection team. In the event that access to a portion of the building was not obtained (which otherwise would have been tested), such limitations specifically are identified in the Findings Section of this report.

PSI did not inspect for or sample materials in areas or locations which presented a hazard to the inspection team, such as those associated with energized electrical systems or within confined spaces.

PSI did not collect samples from building elements where the intended use would be compromised by testing, such as fire rated doors, vapor barriers, mirror mastics, etc. If observed, such materials were assumed to be asbestos-containing.

2.0 GENERAL PROPERTY, BUILDING, AND SURVEY INFORMATION

2.1 PROPERTY AND BUILDING INFORMATION

SUBJECT PROPERTY:	Baptist Hospital 1000 West Moreno Street Pensacola, Florida 32501

2.2 SURVEY INFORMATION

NAME OF INSPECTOR:	Michael McKinney
LICENSE/CERTIFICATION NUMBER:	0074-008-34651

DATE OF SURVEY AND SAMPLING:	February 11, 2025
ESCORT:	the client

3.0 METHODOLOGY

3.1 GENERAL REFERENCES

Survey, sampling, and analysis procedures were performed in general accordance with the guidelines published by the EPA in 40 CFR Part 763 Subpart E, October 30, 1987, the OSHA Asbestos Construction Standard, found in 29 CFR 1926.1101., and in the NESHAP regulation (40 CFR Part 61, April 6, 1973, revised 1990).

3.2 ASBESTOS SAMPLING PROCEDURES

Following the walk-through, the inspector collected selected samples of exposed and/or physically accessible materials identified as suspect ACM. Sampling was limited to those physically accessible materials not involving the destruction of walls, other building elements, physical barriers, or the structural integrity of the item being tested. Sampling was limited to those materials physically accessible to the inspector during the time of the survey, except if the structural integrity of the item being tested would be compromised.

EPA guidelines were used to determine the sampling protocol. Sampling locations were chosen to be representative of the homogeneous area.

Where possible, samples of surfacing material, if present, were collected in general accordance with the EPA random sampling protocol outlined in the EPA publication, "Asbestos in Buildings: Simplified Sampling Scheme for Friable Surfacing Materials" (EPA 560/5-85-030a, October, 1985). The homogeneous area was divided into a grid of nine sub-areas. If nine samples were taken, one sample was taken from each sub-area. If less than nine samples were taken, the EPA random numbering diagram was used to determine which sub-areas would be sampled. While an effort was made to extract the samples from approximately the middle of the sub-area, samples were taken preferentially from already damaged areas or areas which were the least visible.

Samples of TSI and miscellaneous materials were taken as randomly as possible while again attempting to sample already damaged areas so as to minimize disturbance of the material.

After each sample was extracted, where applicable, a spray encapsulant and/or tape covering was applied to the sampled area to prevent potential fiber release.

3.3 ASBESTOS ANALYSIS PROCEDURES

The samples were analyzed at PSI's Asbestos Laboratory, located in Pittsburg, PA. The PSI Asbestos Laboratory is a NVLAP Accredited (ID number 101350-0) Laboratory. A copy of the Laboratory’s Accreditation Certificate is included in the Appendix.

The samples were analyzed for asbestos on a “positive-stop” basis by PLM in accordance with the "Interim Method for the Determination of Asbestos in Bulk Insulation Samples" (EPA 600/M4-82-020). Analysis was performed by visually observing the bulk samples with a stereoscope, followed by slide preparation(s) for microscopic examination and identification.

Using a stereoscope, the microscopist visually estimated relative amounts of each constituent by determining the volume of each constituent in proportion to the total volume of the sample. Next, the samples were mounted on slides and analyzed by PLM for asbestos (chrysotile, amosite, crocidolite, anthophyllite, actinolite/tremolite), and fibrous non-asbestos constituents (mineral wool, fiberglass, cellulose, etc.). Asbestos was identified by refractive indices, morphology, color, pleochroism, birefringence, extinction characteristics, and signs of elongation. The same characteristics were used to identify the non-asbestos constituents.

It should be noted that some ACM might not be accurately identified or quantified by PLM. As an example, the original fabrication of vinyl floor tiles routinely involved milling of asbestos fibers to extremely small sizes. As a result, these fibers may go undetected under the standard PLM method. TEM is another method that can provide a more definitive analysis of these materials, but was not in the scope of work for this project.

3.3.1 LABORATORY QUALITY CONTROL PROGRAM

The PSI Laboratory in Pittsburg, PA, maintains an in-house quality control program. This program involves blind reanalysis of ten percent of all samples, precision and accuracy controls, and use of standard bulk reference materials. In addition, the laboratory is accredited by NVLAP, which also has quality control procedures inherent in its program.

3.4 QUANTIFICATION

Quantities of physically accessible and/or exposed confirmed ACM were estimated. This estimation was performed by taking approximate measurements in the field or estimating quantities based on as-built mechanical or structural drawings. Materials such as pipe insulation and associated MJP were categorized according to the outside diameter of the insulation. Pipe insulation was quantified by linear footage of the insulation while the actual number of MJPs was counted. Insulation on mechanical equipment such as boilers and duct work was quantified by the square footage of the surface area of suspect insulation. Similarly, fireproofings, plasters, ceiling and floor tiles, and cementitious panels were measured in square feet of surface area. The quantities of confirmed ACM that were identified during this investigation are reported in the Tables later in this report.

Quantities identified in this report are estimates, are intended as order of magnitude information or for general policy discussions, and should be confirmed by an abatement contractor when demolition is contemplated.

3.5 PHOTOGRAPHIC DOCUMENTATION

Photographs of HAs and/or sample locations were taken during the course of this survey. While these photographs were not intended to provide a complete record of the survey, they do provide a visual description of the HA and/or sample locations. Photographs of HAs are intended to depict a representative portion of that HA. The captioned photographs taken during this survey are appended.

4.0 FINDINGS

A total of twenty samples were collected from seven suspect HAs during the asbestos survey. In addition, no suspect HAs were observed during the asbestos survey and is assumed to contain asbestos until sampling and laboratory analysis can be conducted.

The tables below list the suspect ACM observed in the Project Area. Table 1 lists the materials that were sampled, along with the results of the inspection and laboratory analysis.

The table or tables provide a description of the materials, their general locations, condition, friability, and, if applicable and/or within the scope of work, EPA NESHAP Category, and estimated quantities.

In the following table or tables, items that are confirmed or assumed to be ACM are indicated in **bold** and items that contain less than 1% asbestos, but are not 'no asbestos detected' are indicated by *italics*.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 CONCLUSIONS

ACM (>1% asbestos) was not identified based on the samples collected from the materials in the Project Area at the Baptist Hospital.

Assumed ACM was not identified in the Project Area at the Baptist Hospital.

Low concentrations of asbestos (trace to 1%) were not identified in the materials sampled in the Project Area at the Baptist Hospital.

5.2 RECOMMENDATIONS AND OTHER CONSIDERATIONS

The information provided herein should be evaluated with respect to prior material analytical results to define the areas where ACM ispresent.

If additional suspect materials not documented in this report are encountered during work activities, the material should be considered asbestos-containing unless bulk sampling is performed and laboratory analysis proves otherwise. The renovation and/or demolition contractor should provide oversight to ensure that additional found suspect ACM is properly tested, if practical, or treated as asbestos-containing.

The client should consult the EPA's NESHAP standard, the State of Florida's asbestos regulations, and any local regulations, for additional details regarding asbestos-related demolition or renovation procedures and requirements.

6.0 WARRANTY AND THIRD PARTY RELIANCE

6.1 STANDARD OF CARE AND WARRANTIES

The field and laboratory results reported herein are considered sufficient in detail and scope to determine the presence of accessible and/or exposed suspect ACM for the Project Area. PSI warrants that the findings contained herein have been prepared in general accordance with accepted professional practices at the time of its preparation as applied by professionals in the community. Changes in the state of the art or in applicable regulations cannot be anticipated and have not been addressed in this report.

The scope of work addressed readily accessible and exposed locations within the Project Area. Observation or sampling of inaccessible areas such as behind walls or within ductwork was not performed unless otherwise noted in this report. The survey and analytical methods have been used to provide the client with information regarding the presence of accessible and/or exposed suspect ACM existing at the time of the survey. Test results are valid only for the material or materials tested. There is a distinct possibility that conditions may exist which could not be identified within the scope of the survey or which were not apparent during the on-site work. The survey is also limited to the information available from the client at the time it was conducted.

The methodologies may include reviewing information provided by other sources. PSI treats information obtained from interviews or other sources as reliable, complete and accurate. The scope of work did not require PSI to independently verify the information provided. Therefore, PSI cannot and does not warrant or guarantee that the information provided by these other sources is reliable, complete or accurate.

Our services were not intended to be technically exhaustive. There is a possibility that with the proper application of methodologies, conditions may exist on the property that could not be identified within the scope of the survey or that were not reasonably identifiable from the available information. The report may not represent all conditions at the subject property or project area as it only reflects the information gathered from specific locations on the date of the survey. No inspection can wholly eliminate uncertainty regarding the potential for asbestos in connection with the subject property.

The observations and/or recommendations presented in this report are time dependent, and conditions will change. This report speaks only as of its date.

As directed by the client, PSI did not provide any service to investigate or detect the presence of moisture, mold or other biological contaminants in or around any structure, or any service that was designed or intended to prevent or lower the risk of the occurrence of the amplification of the same. Client acknowledges that mold is ubiquitous to the environment with mold amplification occurring when building materials are impacted by moisture. Client further acknowledges that site conditions are outside of PSI's control, and that mold amplification will likely occur, or continue to occur, in the presence of moisture. As such, PSI cannot and shall not be held responsible for the occurrence or recurrence of mold amplification.

No other warranties are implied or expressed.

6.2 RELIANCE

Northstar Contracting Group, PSI's client, may rely on this report.

6.3 THIRD PARTY RELIANCE

This report was prepared pursuant to a contract between PSI and its client. That contractual relationship included an exchange of information about the property that was unique and serves as the basis upon which this report was prepared. Because of the importance of these understandings, our survey may not be sufficient for the intended purposes of another party.

Reliance or any use of this report by anyone other than those parties identified above for which it was prepared, except with express written permission, is prohibited and therefore not foreseeable to PSI. Any unauthorized reliance on or use of this report, including any of the information or conclusions contained herein, will be at the third party's risk. No warranties or representations expressed or implied in this report are made to any such third party.

Third party reliance letters may be issued:

- upon timely request;
- subject to the permission of our original client; and
- payment of the then-current fee for such letters.

All third parties relying on our report, by such reliance, agree that such reliance is limited by our proposal and/or General Conditions, as applicable.

08	008A	(1) Gray, Drywall, Homogeneous	NO ASBESTOS DETECTED	15% Cellulose Fiber
		(2) White, Joint Compound, Homogeneous	NO ASBESTOS DETECTED	None Reported

Quantitation is based on a visual estimation of the relative area of bulk sample components, unless otherwise noted in the "Comments" section of this report. The results are valid only for the item tested as received. This report may not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. Method used: E.P.A. Interim Method for the Determination of Asbestos in Bulk Insulation Samples (EPA 600/M4-82-020). Polarized Light Microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative Transmission Electron Microscopy is currently the only method that can be used to determine if the material can be considered or treated as non-asbestos containing. Samples will be disposed of within 30 days unless notified in writing by the client. No part of this report may reproduced, except in full, without written permission of the laboratory. The reporting limit is 1% by weight. NVLAP Lab Code 101350-0.

Respectfully submitted,
PSI, Inc.

George Skarupa

Quantitation is based on a visual estimation of the relative area of bulk sample components, unless otherwise noted in the "Comments" section of this report. The results are valid only for the item tested as received. This report may not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. Method used: E.P.A. Interim Method for the Determination of Asbestos in Bulk Insulation Samples (EPA 600/M4-82-020). Polarized Light Microscopy is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative Transmission Electron Microscopy is currently the only method that can be used to determine if the material can be considered or treated as non-asbestos containing. Samples will be disposed of within 30 days unless notified in writing by the client. No part of this report may reproduced, except in full, without written permission of the laboratory. The reporting limit is 1% by weight. NVLAP Lab Code 101350-0.

APPENDIX C – 3rd Party Consultant & IH

3rd Party Industrial Consultant
And
Industrial Hygienist

JEREMY JERNIGAN, CIH, CSP, CHMM, FLAC, FLMA

CHIEF SCIENTIST/PRINCIPAL CONSULTANT

ORLANDO, FLORIDA

TOTAL YEARS OF EXPERIENCE: 25 /YEARS WITH INTERTEK-PSI: 20

Education

- Bachelor of Science, Environmental Studies, University of West Florida

Certifications/Registrations/Technical Training

- Certified Industrial Hygienist
- Certified Safety Professional
- Certified Hazardous Materials Manager
- Florida Licensed Asbestos Consultant
- Florida Licensed Mold Assessor

Professional Experience

Mr. Jernigan has 25 years of experience in the environmental, health, and safety field. He provides comprehensive industrial hygiene services nationwide to address chemical, physical, and biological hazards and stressors in the workplace. He has served as a corporate level safety and health principal for a major energy provider and currently maintains a varied private client base that consists of multi-site and global companies. He has also provided consultation to many federal, state, and local governmental entities. In addition, Mr. Jernigan's historical work includes environmental contamination assessment and remediation of properties throughout the southeast United States.

Representative Environmental/Indoor Air Quality Project Experience - State and Local Government Projects

- Escambia, Santa Rosa, and Okaloosa County School Districts, Florida - Principal Consultant for large-scale asbestos abatement and demolition projects and other industrial hygiene related services.
- Brevard County, Florida Jail - Provided various industrial hygiene consulting services for an operational jail facility.
- Lee County, Florida - Provided consulting services for roadway project where asbestos laden fill material was improperly placed.
- School District of Escambia County - Provided project management and oversight for large-scale mold remediation projects post Hurricane Ivan. As many as 33 schools were remediated in a period of approximately three weeks.

JEREMY JERNIGAN, CIH, CSP, CHMM, FLAC, FLMA (continued)

- City of Miami - Principal Consultant for IAQ assessments of State's Attorney offices
- Managed several State of Florida Petroleum Cleanup Program Sites to include the assessment contaminated media and remedial design and implementation.

Representative Federal Project Experience

- US Postal Service, Ciales, Puerto Rico – Led assessment and remediation efforts for a mercury spill within a facility and associated mail vehicles
- Various Federal Facilities – Principal Consultant for New Construction and Renovation pre-occupancy LEED testing
- NAS Jacksonville - Principal Consultant for the abatement of asbestos-containing materials from in excess of 200 housing units.
- NAS Florida and Mississippi - Principal Consultant for multiple ACM/LBP/Mold surveys and preparation of abatement specifications.
- Hurlburt Field and Eglin AFB, Florida - Principal Consultant for multiple ACM/LBP/Mold surveys and preparation of abatement specifications.
- Southeast US & Puerto Rico - Principal Consultant for multiple ACM/LBP surveys and preparation of abatement specifications for US Coast Guard facilities.
- Federal Prisons - Managed industrial hygiene assessments for a prison facility where prisoners perform self-help site maintenance.
- US Navy; Pensacola Naval Air Station - Managed mold and LEED consultation for a structure constructed in 1938 and was left unused for 15 years. The building was being converted for use as the new base headquarters.
- USDA – Principal Consultant for IAQ investigation within a subtropical horticultural research station.

Representative Private Client Project Experience

- Gulf Power (Southern Company and NextEra Energy) - Served as Corporate Principal Health and Safety Consultant with wide ranging responsibilities including OSHA compliance and reporting, incident analysis, and corporate health and safety plan development.

JEREMY JERNIGAN, CIH, CSP, CHMM, FLAC, FLMA (continued)

- Private Client – Manage testing tool ventilation systems to verify compliance with SEMI testing criteria.
- Directed and/or conducted hundreds of renovation and demolition asbestos surveys for private clients as a Florida Licensed Asbestos Consultant.
- Various Private Clients – Generate Site Health and Safety Plans for working in areas with soil and groundwater impacted by various chemical substances.
- Food Distribution Hub, Orlando – Assessed community noise generation of facility and designed sound attenuation barrier controls
- Gulf Power Company - Managed asbestos and demolition consulting services for the removal of the original 3 boilers at the Crist Plant. Also, managed asbestos consulting services and IAQ/IH assessment services throughout facilities (commercial and industrial).
- LSU Health and Safety – Principal Consultant for the assessment of a silica release within a dental school
- Florida Hospital – Provide various industrial hygiene consulting service for an operational health care facility.
- Major Hotel Chain – Principal Consultant for Legionella investigations for hotel facilities
- Critical Health Care Facility – Principal Consultant for IAQ evaluation using USP 797 protocols within a critical care facility
- Pensacola Junior College - Principal Consultant for multiple ACM/LBP surveys and the performance of air sampling/analysis for asbestos abatement projects on college campus.
- GE Wind and Power – Provided periodic Industrial Hygiene consulting services for the assessment of potential exposure to chemical and physical hazards in a large-scale wind turbine manufacturing facility.
- Brooks Peanut – Managed Industrial Hygiene consulting services for the assessment of potential exposure to respirable dust, silica, and noise in a large-scale peanut processing facility.
- Private Client - Provided project management and oversight for a large-scale mold remediation project conducted on a 30,000 square office building occupied at the time by trial lawyers.
- Private Client - Project manager for the performance of an Indoor Air Quality Assessment for an aircraft manufacturing facility.
- Poarch Band of Creek Indians - Managed IAQ and other IH (i.e. methamphetamine lab assessment, fungal surveys) services for various facilities located on the reservation.
- Pall Corporation - Managed mold consultation for a membrane manufacturing facility.
- Montenay Bay - Managed IH services for a “waste-to-power” generation facility including employee exposure monitoring for metals, dusts, volatile organics, and noise.

John C Harris

INDUSTRIAL HYGIENIST/Sr. PROJECT MANAGER

Year started with PSI: **2005**

Education

B.S Health and Human Sciences, University of Southern Mississippi, 1993

Certifications/Registrations/Technical Training

EPA Accredited Lead Based Paint Inspector
Florida, Alabama: EPA/ AHERA/ ASHARA Asbestos Inspector Accreditation
Florida, Alabama: EPA/ AHERA/ ASHARA Asbestos Supervisor Accreditation
NIOSH 582 Air Sampling and Analysis, 2011
The Environmental Institute: Evaluating Mold and Mold Remediation

Professional Experience

Mr. Harris is a Project Manager in the Pensacola office; he has conducted Indoor Air Quality, Asbestos projects, and Phase I Environmental Site Assessments in both Florida and Alabama. His current responsibilities include conducting Asbestos, Lead-Based Paint, Indoor Air Quality projects, and Phase I ESAs. The ESAs have included both developed and undeveloped properties to include commercial, residential and industrial properties and large acre tracts of land.

Representative Phase I Environmental Site Assessment Project Experience

- Phase I Environmental Site Assessment for FDIC of various sites throughout Wakulla County, Florida.
- Phase I Environmental Site Assessments for McDonald's Corporation, various proposed McDonald's locations throughout Northwest Florida and South Alabama.
- Phase I Environmental Site Assessment for City of Pensacola, Florida.
- Phase I Environmental Site Assessment for Moulton Properties Inc. at the Gulf Breeze Office Buildings in Gulf Breeze, Florida
- Phase I Environmental Site Assessment for Moulton Properties, Inc. at the Davis Highway Office Building in Pensacola, Florida

Representative Indoor Air Quality/Fungal Assessment Project Experience

- Escambia County School District, Pensacola, Florida – Staff Scientist for an Indoor Air Quality Assessment of the facility. The scope of work for the assessment included a visual assessment of the facility, the measurement of comfort parameters, and collection of spore trap samples for identification and enumeration of fungal spores.
- Whiting Field Medical Facility, Milton, FL - Staff Scientist for an Indoor Air Quality Assessment of the facility. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.
- Locklin Vocation School – Santa Rosa County School District. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.
- Milton High School, Building 50 – Santa Rosa County School District. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.

- Blue Angel Elementary School – The School District of Escambia County. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.
- West Florida High School – The School District of Escambia County. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.
- Pine Forest High School – The School District of Escambia County. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.
- Central High School – Santa Rosa County School District. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.
- White Wilson Medical Center, Fort Walton Beach - Staff Scientist for an Indoor Air Quality Assessment of the facility. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration.
- NAS Pensacola Building 781-O - - Staff Scientist for an Indoor Air Quality Assessment of the facility. The scope of work for the assessment included a visual and moisture assessment of the facility, the measurement of comfort parameters, and collection of air samples for fungi identification and enumeration. Performed client oversight for the remediation of the building.

Representative Asbestos/Lead Based Paint Project Experience

- Gulf Power, Crist Plant Pensacola, FL – Performed oversight and asbestos air monitoring for the demolition of Boiler 1, 2, and 3
- Pensacola NAS: Bldg.'s. 782, 633, 1811, Base Chapel - Provided oversight as well as personnel and area air monitoring during abatement of friable materials. Also inspected areas of concern and provided clearance sampling. Performed asbestos sampling.
- Provided oversight demolition, 250 housing units for Escambia County/Corps of Engineers.
- Jasmine Apartments, Pensacola, FL – Performed air monitoring for clearance purposes.
- School District of Escambia County Florida – Performed air monitoring and sampling.
- West Florida Hospital, Pensacola, Florida – Staff Scientist for an Indoor Air Quality Assessment of the medical facility. The scope of work included a visual assessment of the facility, collection of surface and spore trap samples for microbial analysis, and collection of comfort parameter data using portable IAQ monitor.
- School District of Escambia County, Florida – Performed AHERA 3-Year Re-Inspections at various schools.

John Jenkins

SENIOR VICE PRESIDENT SOUTHEAST

Summary of Experience

John Jenkins has been in the industry since 2001 and with NorthStar since 2003. John has experience in management, business development and project and account management. He has extensive experience in developing and maintaining new accounts, marketing, and developing proven relationships with building owners and facilities engineering personnel. He is personally involved with each project undertaken and continually interfaces with the client to ensure satisfaction from inception to completion on every project his branch performs. Mr. Jenkins responsibilities include estimating projects, interpreting bid documents, specifications and plans, overall project management and management of the sales, administrative, P&L and operational staff of the Southeast regional offices including Charlotte, Atlanta, Pensacola, and Orlando.

Representative Project Experience with NorthStar:

TECO Big Bend Dismantlement

Project consists of the dismantling and demolition of three electrical generators, including the removal of three coal-fired boilers, five ball mills, 18 coal bin cone bottoms, three SCR catalytic pollutions controls units, four electrostatic precipitators, and two steam turbine generators.

I Tampa, FL | Dec 2023-May 2026 I $29,192,293 I Role on Project: Senior Vice President Southeast

FPL Scholz Plant

Project consisted of Abatement and Demolition of a decommissioned coal powered plant facility. The dismantlement process consisted of a 330-ton crawler crane to dismantle the structure sections at a time as to not cause excess vibrations that may affect nearby coal ash pond.

| Sneads, FL | Feb 2022-Jun 2024 | $17,062,590 I Role on Project: Senior Vice President Southeast

FPL Martin Plant Units 1 & 2

Controlled dismantlement (everything on the hook) and removal of boilers and steam turbines with all associated facilities including oil storage tanks, transfer pumps, piping, air preheaters, gas ducts, electrostatic precipitators and chimneys. Abatement of all friable and non-friable asbestos containing material.

| Indiantown, FL | Aug 2020-Dec 2023 | $55,196,966 I Role on Project: Senior Vice President Southeast

Duke Energy Crystal River Plant Units 1 & 2

Project consisted of decommissioning all systems, structures, and components, abating all hazardous, non-hazardous, and regulated wastes, demolishing all structures down to 2’ below grade, recycling of all ferrous, non-ferrous, concrete, asphalt and returning all areas of the property back to a low-maintenance vegetation space.

| Crystal River, FL | Jun 2019-Dec 2023 | $42,165,000 I Role on Project: Senior Vice President Southeast

RD Morrow Generating Station

Project consisted of total decommissioning of a 400-MW coal fired power plant. The areas of the plant were released by the owner in phases due to isolations being made by plant operations.

| Purvis, MS | Mar2019-Jul 2020 | $17,094,453 I Role on Project: Senior Vice President Southeast

FPL Martin Terminal

Martin Terminal demolition consisted of two 48' tall x 280' diameter #6 fuel-oil tanks, three metering stations, above ground fuel- oil piping (5,700 LF), underground drain lines, electrical duct banks, and all associated concrete pedestals and foundations.

| Riviera Beach, FL | Oct 2019-Mar 2020 | $2,246,246 I Role on Project: Senior Vice President Southeast

FPL GTTP Sites 1,2 & 3
Project consisted of abatement and demolition of buildings, boilers, and turbines at the decommissioned coal fired plant.
| Fort Lauderdale, FL | Mar 2017-Dec 2018 | $8,958,936 I Role on Project: Senior Vice President Southeast
Disney Epcot Project Sausalito
Project consisted of full interior gut of building with riding equipment and building structure to remain.
| Orlando, FL | Sep 2017-Dec 2018 | $2,396,013 I Role on Project: Senior Vice President Southeast
FPL Turkey Point Plant
Project included the removal of asbestos containing material as well as dismantlement of the existing stacks, tanks, boiler furnace, boiler structure, selected components, and equipment in and around the turbine and mezzanine decks on site.
|Homestead, FL | Oct 2014-Sep 2018 | $24,893,226 I Role on Project: Senior Vice President Southeast
FPL Cutler Plant
Project consisted of removal and disposal of all asbestos containing materials and demolition of the Plant Facility and all associated support facilities. The two boiler tower units along with their associated stacks were felled by means of explosives.
| Miami, FL | Mar 2013-May 2014 | $8,040,834 I Role on Project: Senior Vice President Southeast
Gulf Power Plant Crist Facility
The project consisted of the removal of approximately 16,000 SF of asbestos containing duct insulation and 12,000 SF of asbestos containing boiler insulation and refractory. The demolition scope is comprised of removal of all piping associated with the boilers as well as drums, tubes, headers, catwalks, structural steel, and ductwork. This required significant crane and rigging associated with this project.
| Pensacola, FL | Jan 2013-Jan 2014 | $2,625,827 I Role on Project: Senior Vice President Southeast
Eagle Point Refinery
Decommissioning, Abatement and Demolition of former refinery. Upon completion of removing all asbestos abatement, the demolition work was performed with the use of mechanical equipment. A total of 10 large pieces of equipment and operators to raze the facility and process the material.
| Westville, NJ | Nov 2011-Nov 2014 | $23,500,000 I Role on Project: Senior Vice President Southeast
Cargill Fructose Corn Syrup Plant
Plant decommissioning and demolition of this former fructose corn syrup manufacturing facility. Work included asbestos abatement of friable and non-friable insulation, floor tile and mastics, roofing, transite and other materials. The demolition portion consisted of four 6-story concrete and steel structures with process equipment totaling over 500,000 square feet and dozens of 40K gallon and smaller above ground storage tanks.
| Decatur, AL | Aug 2010-Apr 2011 | $5,878,585 I Role on Project: Senior Vice President Southeast

Education, Licenses, Registrations and Training

- Holds General Contractor, Asbestos, UG/AG Storage Tank, Roofing licenses along with safety certificates in the State of Florida
- BS in Business Administration, University of Florida

John Ryan

REGIONAL HEALTH AND SAFETY MANAGER

Summary of Experience

Mr. Ryan has over 35 years in the construction industry with over 20 years of experience as a safety and compliance officer. He has been with NorthStar since 2003 and is certified to conduct training in HAZWOPER and the OSHA Outreach Program. He also holds current certification as an Asbestos Project Designer and has been instructing supervisor safety training seminars since 1995 for various organizations. Additionally, he has served as a guest speaker for contractor's site supervisors and safety representatives.

As Regional Manager of Health and Safety, Mr. Ryan is responsible for the safety and compliance of all NorthStar projects up and down the eastern seaboard from Maine to Florida. Mr. Ryan's responsibilities include providing technical assistance in the area of safety and health to all management and operations personnel. Through the performance of job site audits, he has assisted in the reduction of accidents, regulatory violations and citations by ensuring full compliance with our Corporate Safety Program, TARGET ZERO, and all applicable rules and regulations governing our industry. As the Regional Manager, he develops and implements specific safety-training programs for projects in his territory. He is also NorthStar's representative for meetings and hearings with regulatory agencies.

Representative Project Experience with NorthStar:

Duke Energy Crystal River Unit 3

Project consists of the demolition, abatement and decommissioning of the Nuclear 3 unit. Scope of work includes the interior gut of Control Complex, Auxiliary Building, Intermediate Building, Cold Shop, and Hot Shop prior to structural demolition.

| Crystal River, FL | Nov 2021-Jul 2026 | $26,253,140 | Role on Project: Regional Health and Safety Manager

TECO Big Bend Dismantlement

Project consists of the dismantling and demolition of three electrical generators, including the removal of three coal-fired boilers, five ball mills, 18 coal bin cone bottoms, three SCR catalytic pollutions controls units, four electrostatic precipitators, and two steam turbine generators.

I Tampa, FL | Dec 2023-May 2026 I $29,192,293 I Role on Project: Regional Health and Safety Manager

FPL Scholz Plant

Project consisted of Abatement and Demolition of a decommissioned coal powered plant facility. The dismantlement process consisted of a 330-ton crawler crane to dismantle the structure sections at a time as to not cause excess vibrations that may affect nearby coal ash pond.

| Sneads, FL | Feb 2022-Jun 2024 | $17,062,590 I Role on Project: Regional Health and Safety Manager

FPL Martin Plant Units 1 & 2

Controlled dismantlement (everything on the hook) and removal of boilers and steam turbines with all associated facilities including oil storage tanks, transfer pumps, piping, air preheaters, gas ducts, electrostatic precipitators and chimneys. Abatement of all friable and non-friable asbestos containing material.

| Indiantown, FL | Aug 2020-Dec 2023 | $55,196,966 I Role on Project: Regional Health and Safety Manager

Duke Energy Crystal River Plant Units 1 & 2

Project consisted of decommissioning all systems, structures, and components, abating all hazardous, non-hazardous, and regulated wastes, demolishing all structures down to 2' below grade, recycling of all ferrous, non-ferrous, concrete, asphalt and returning all areas of the property back to a low-maintenance vegetation space.

| Crystal River, FL | Jun 2019-Dec 2023 | $42,165,000 I Role on Project: Regional Health and Safety Manager

RD Morrow Generating Station

Project consisted of total decommissioning of a 400-MW coal fired power plant. The areas of the plant were released by the owner in phases due to isolations being made by plant operations.

| Purvis, MS | Mar 2019-Jul 2020 | $17,094,453 I Role on Project: Regional Health and Safety Manager

FPL Martin Terminal

Martin Terminal demolition consisted of two 48' tall x 280' diameter #6 fuel-oil tanks, three metering stations, above ground fuel- oil piping (5,700 LF), underground drain lines, electrical duct banks, and all associated concrete pedestals and foundations.

| Riviera Beach, FL | Oct 2019-Mar 2020 | $2,246,246 I Role on Project: Regional Health and Safety Manager

FPL - GTTP Sites 1,2 & 3

Project consisted of abatement and demolition of buildings, boilers, and turbines at the decommissioned coal fired plant.

| Fort Lauderdale, FL | Mar 2017-Dec 2018 | $8,958,936 I Role on Project: Regional Health and Safety Manager

Disney Epcot -Project Sausalito

Project consisted of full interior gut of building with riding equipment and building structure to remain.

| Orlando, FL | Sep 2017-Dec 2018 | $1,778,800 I Role on Project: Regional Health and Safety Manager

FPL Turkey Point Plant

Project included the removal of asbestos containing material as well as dismantlement of the existing stacks, tanks, boiler furnace, boiler structure, selected components, and equipment in and around the turbine and mezzanine decks on site.

| Homestead, FL | Oct 2014-Sep 2018 | $24,893,226 I Role on Project: Regional Health and Safety Manager

FPL Cutler Plant

Project consisted of removal and disposal of all asbestos containing materials and demolition of the Plant Facility and all associated support facilities. The two boiler tower units along with their associated stacks were felled by means of explosives.

| Miami, FL | Mar 2013-May 2014 | $8,040,834 I Role on Project: Regional Health and Safety Manager

Gulf Power Plant Crist Facility

The project consisted of the removal of approximately 16,000 SF of asbestos containing duct insulation and 12,000 SF of asbestos containing boiler insulation and refractory. The demolition scope is comprised of removal of all piping associated with the boilers as well as drums, tubes, headers, catwalks, structural steel, and ductwork. This required significant crane and rigging associated with this project.

| Pensacola, FL | Jan 2013-Jan 2014 | $2,625,827 I Role on Project: Regional Health and Safety Manager

Eagle Point Refinery

Decommissioning, Abatement and Demolition of former refinery. Upon completion of removing all asbestos abatement, the demolition work was performed with the use of mechanical equipment. A total of 10 large pieces of equipment and operators to raze the facility and process the material.

| Westville, NJ | Nov 2011-Nov 2014 | $23,500,000 I Role on Project: Regional Health and Safety Manager

Cargill -Fructose Corn Syrup Plant

Plant decommissioning and demolition of this former fructose corn syrup manufacturing facility. Work included asbestos abatement of friable and non-friable insulation, floor tile and mastics, roofing, transite and other materials. The demolition portion consisted of four 6-story concrete and steel structures with process equipment totaling over 500,000 square feet and dozens of 40K gallon and smaller above ground storage tanks.

| Decatur, AL | Aug 2010-Apr 2011 | $5,878,585 I Role on Project: Regional Health and Safety Manager

Education, Licenses, Registrations and Training

- Safety Management Specialist SMS-2247
- Construction Health and Safety Technician CHST-C3198
- Asbestos Project Monitor
- Asbestos Inspector
- Asbestos Management Planner
- Asbestos Designer

- First Aid / BLS CPR Certified
- Radiation Safety Officer
- Radiation Worker

Robert A. Najera

BRANCH HEALTH & SAFETY OFFICER

Summary of Experience

Mr. Najera has worked in the safety industry since 2013 and with NorthStar since 2014. Mr. Najera's strengths include managerial and leadership roles with skills in employee relations, training and team building at NorthStar. He is a proactive bilingual site safety representative experienced in overseeing various divisions in the demolition field. He brings knowledge in all aspects of safety operations and facilities general business disciplines to effectively accomplish innovative process methods, increase efficiency and produce high levels of customer satisfaction. This experience has allowed him to demonstrate success in creating effective communication between personnel, contractors, and management.

Representative Project Experience

TECO Big Bend Power Station

Project consisted of dismantling and complete demolition of the facility. Demolition with the use of a 125-foot high-reach excavator equipped with a shear along with crane rigging.

| Tampa, FL | Dec 2023-May 2026 | $29,192,293 | Role on Project: Branch Health and Safety Officer

FPL Plant Scholz

Project consisted of Abatement and Demolition of a decommissioned coal powered plant facility. The dismantlement process consisted of a 330-ton crawler crane to dismantle the structure sections at a time as to not cause excess vibrations that may affect nearby coal ash pond.

| Sneads, FL | Feb 2022-Jun 2024 | $17,062,590 | Role on Project: Branch Health and Safety Officer

Southern Company/GA Power Plant McIntosh

Structural demolition of a retired coal powered facility. Project consisted of implosion preparation of a 400-foot chimney stack, boilers and the complete dismantlement of coal conveyor systems. As well as Abatement of asbestos found in duct work, floor tile, and roofing materials.

| Rincon, GA | Jan 2021-Nov 2022 | $10,783,695 | Role on Project: Branch Health and Safety Officer

NAS Pensacola BLD 633

Project consisted of interior demolition and select abatement of plaster ceiling, floor tile and duct work for the remodeling of a school building located on the NAS Pensacola base.

| Fort Myers, FL | Jul 2020-Mar 2021 | $2,016,520 | Role on Project: Branch Health and Safety Officer

Duke Energy Crystal River Plant Units 1 & 2

Project consisted of decommissioning all systems, structures, and components, abating all hazardous, non-hazardous, and regulated wastes, demolishing all structures down to 2' below grade, recycling of all ferrous, non-ferrous, concrete, asphalt and returning all areas of the property back to a low-maintenance vegetation space.

| Crystal River, FL | Jun 2019-Dec 2023 | $42,165,000 | Role on Project: Branch Health and Safety Officer

FPL Martin Terminal

Martin Terminal demolition consisted of two 48' tall x 280' diameter #6 fuel-oil tanks, three metering stations, above ground fuel- oil piping (5,700 LF), underground drain lines, electrical duct banks, and all associated concrete pedestals and foundations.

| Riviera Beach, FL | Oct 2019-Mar 2020 | $2,246,246 | Role on Project: Branch Health and Safety Officer

Hensel Phelps Tampa International Airport
Project consisted of the removal of existing structures for expansion and remodeling purposes. The project team created safe effective means of demolition despite the hazards of a small footprint.
| Tampa, FL | Jul 2019-Apr 2020 | $1,193,843| Role on Project: Branch Health and Safety Officer

FPL GTTP Sites 1,2 & 3
Project consisted of abatement and demolition of buildings, boilers, and turbines at the decommissioned coal fired plant.
| Fort Lauderdale, FL | Mar 2017-Dec 2018 | $8,958,936 | Role on Project: Branch Health and Safety Officer

City of Orlando Mercy Drive Apartments
Project consisted of abatement and demolition of several buildings within the apartment complex. Site required multiple teams to work at several portions of the footprint.
| Orlando, FL | Oct 2017-Mar 2018 | $1,172,936 | Role on Project: Branch Health and Safety Officer

Two Rivers WTP – Phase 2
Project consisted of select demo and abatement in an active wastewater treatment plant. The crew worked with and around multiple subcontractors onsite to ensure effective and safe work production in all fields throughout the site.
| Gastonia, NC | Aug 2017-Nov 2017| $507,293 | Role on Project: Branch Health and Safety Officer

Duke Energy Sutton Steam Plant – Final Phase
Project consisted of dismantling the remaining portion of the chimney stacks utilizing a 90-foot-high reach excavator.
| Wilmington, NC | Jun 2017-Aug 2017 | $3,224,200 | Role on Project: Branch Health and Safety Officer

Disney Coronado
Project consisted of dismantlement of the Coronado Hotel structures in order for the remodel to be constructed.
| Orlando, FL | Mar 2017-Jul 2019 | $506,670 | Role on Project: Branch Health and Safety Officer

International Paper Riegelwood
Project consisted of the dismantlement of a paper roller section to be removed from the upper levels of the building utilizing house crane. Team worked to prep multiple sections of the unit at a time prior to utilizing the house crane at select hours of the day to avoid impeding plat paper production.
| Leland, NC | Sep 2016-Nov 2016 | $328,623 | Role on Project: Branch Health and Safety Officer

Duke Energy WS Lee Steam Station
Project consisted of the abatement and demolition of infrastructures located in the plants old coal yard. Multiple buildings needed precise planning and demolition sequences to ensure safe execution of the project.
| Belton, SC | Jul 2016-Sep 2016 | $521,967 | Role on Project: Branch Health and Safety Officer

Duke Energy Sutton Steam Plant
Project consisted of the demolition of two chimneys stacks, 550 feet tall and the second being 525 feet tall. The demolition process consisted of 4 brokk units per stack on mast climbers. With the abatement process utilizing a swing state to reach the 25-foot mastic coated interior walls at the top of the stack.
| Wilmington NC | Jul 2015-Jun 2016 | $745,486 | Role on Project: Branch Health and Safety Officer

Murphy Brown South Mill
Project consisted of the demolition of an 80-foot decommissioned silo and the buildings constructed around the active silos that were to remain. The crew used a 100 FT high reach to assist in the demolition of the site.
| Warsaw, NC | Jun 2015-Jul 2015 | $588,453 | Role on Project: Branch Health and Safety Officer

Duke Energy Cape Fear – Phase 2
Project phase consisted of the complete dismantlement of the coal fired plant after abatement had been completed. This site averaged 60 employees in several sections that required consistent safety oversight to maintain a safe working environment for all employees onsite.
| Moncure, NC | Sep 2014-Feb 2015 | $1,077,718 | Role on Project: Branch Health and Safety Officer

FPL Turkey Point Plant

Project included the removal of asbestos containing material as well as dismantlement of the existing stacks, tanks, boiler furnace, boiler structure, selected components, and equipment in and around the turbine and mezzanine decks on site.
| Homestead, FL | Oct 2014-Sep 2018 | $24,893,226 | Role on Project: Branch Health and Safety Officer

Langley Air Force Base

Project required employees to conduct floor tile abatement during night shift on an occupied building of an air force base. Safety leadership ensured multi stop points were in place to ensure high quality safety measures were maintained throughout the course of the project.
| Langley AFB, VA | Jul 2014-Aug 2014 | $139,840 | Role on Project: Branch Health and Safety Officer

Education, Licenses, Registrations and Training

- Construction Health and Safety Technician (CHST)
- Safety Trained Supervisor Construction (STSC)
- OSHA 510 Certified
- OSHA 502 Certified (*Refresher to 500 construction course)*
- 40-Hour Hazwoper Licensed
- Florida Supervisor Abatement Certificate
- AHA Heart Saver - First Aid / CPR Instructor
- First Aid Certified
- OSHA 30-Hour Construction Licensed
- OSHA 10-Hour Construction Licensed

Chris Schillesci

SENIOR PROJECT MANAGER

Summary of Experience

Chris Schillesci has been a professional in the heavy industrial dismantling and demolition field since 1980 and has been with NorthStar since 2013. With expertise in investment recovery, estimating, and project management, he excels in developing schedules, work plans, and strategies for scrap and salvage management, as well as creating plans for structural drops and heavy rigging. Mr. Schillesci's project management portfolio includes ventures ranging from $100,000 to $40 million, in industries such as refining, petrochemical, power generation, mining, food processing, cement manufacturing, paper mills, steel mills, and aluminum smelting facilities.

Representative Project Experience with NorthStar:

TECO Big Bend Dismantlement

Project consists of the dismantling and demolition of three electrical generators, including the removal of three coal-fired boilers, five ball mills, 18 coal bin cone bottoms, three SCR catalytic pollutions controls units, four electrostatic precipitators, and two steam turbine generators.

I Tampa, FL | Dec 2023 -May 2026 I $29,192,293 | Role on Project: Senior Project Manager

FPL Martin Plant Units 1 & 2

Controlled dismantlement (everything on the hook) and removal of boilers and steam turbines with all associated facilities including oil storage tanks, transfer pumps, piping, air preheaters, gas ducts, electrostatic precipitators and chimneys. Abatement of all friable and non-friable asbestos containing material.

| Indiantown, FL | Aug 2020-Dec 2023 | $55,196,966 | Role on Project: Senior Project Manager

RD Morrow Generating Station

Project consisted of total decommissioning of a 400-MW coal fired power plant. The areas of the plant were released by the owner in phases due to isolations being made by plant operations.

| Purvis, MS | Mar2019-Jul 2020 | $17,094,453 | Role on Project: Senior Project Manager

FPL Turkey Point Plant

Project included the removal of asbestos containing material as well as dismantlement of the existing stacks, tanks, boiler furnace, boiler structure, selected components, and equipment in and around the turbine and mezzanine decks on site.

| Homestead, FL | Oct 2014-Sep 2018 | $24,893,226 | Role on Project: Senior Project Manager

TECO Gannon Station Unit #5 Dismantlement

The project included the removal of a boiler, boiler structure and coal bins from the top of an active turbine building. Approximately 3,000 tons of steel was recovered and recycled. A 300-ton crawler crane was used to remove and lower the boiler in sections.

| Tampa, FL | Aug 2013-May 2014 | $3,835,451 | Role on Project: Senior Project Manager

Representative Project Experience before NorthStar

Colorado Mining Facility, Contract Value $1,200,000: Demolition and land reclamation of a Colorado Mine Facility. The job included the removal of 1,000 tons of steel, and the demolition of 5,000 tons of concrete, and moving 20,000 cubic yards of dirt.

Cement Manufacturing Facility, Nebraska Contract Value $1,400,000: Work was for total demolition of the facility, including kilns, foundations, boiler building, and multiple concrete storage silo structures. The work was performed utilizing explosives, concrete pulverizers, and a 6-ton wrecking ball mounted on a 150-ton conventional crane. The project included investment recovery, recycling of 50,000 tons of concrete, and 5,000 tons of steel.

Cement Manufacturing Facility, AK, Contract Value $750,000: Demolition of cement storage silos, 2 concrete stacks and numerous Kiln foundations, and site restoration of the abandoned facility. The work involved the demolition and transportation of 20,000 tons of concrete.

Paper Mill, Southern LA, Contract Value $500,000: Selective dismantling and demolition. The scope of work included the dismantling of a process structure located within an active process unit, demolishing a 1,000-ton boiler and the saw cutting and removal of 4,000 tons of concrete.

Coal Gasification Unit, LA, Contract Value $1,500,000: Dismantling, salvage, and demolition of a coal gasification unit for a Major Chemical Plant (Dow Chemical) on the Gulf Coast. The process unit was dismantled utilizing two, 240-ton conventional crawler cranes. The main structure was 260 foot tall with a total steel weight of 8,000 tons.

Boiler Demolition Alabama Electric, Andalusia AL, Contract Value $1,000,000: Asbestos abatement and dismantling of 3 Gas fired boilers and 2 brick Chimneys. Approximately 3,000 tons of steel was recovered. The boilers were attached to an active power plant. Project included the removal of crushing, equipment, boiler feed water pumps and precipitators.

Dismantling Process Units, Citgo Petroleum Lake Charles LA, Contract Value $1,875,000: The work involved dismantling 5 process towers 10' x 125', miscellaneous sized tanks, pumps and all piping systems using ultra high-pressure water cutting equipment to meet the facility's 100% cold cutting requirement. The steel from the process tower was wrapped in poly and transported to a landfill for disposal. Six high-pressure spheres measuring 100' in diameter were demolished using a special plate-cutting shear mounted to a 75-ton excavator. Also added was a cooling tower measuring 50' x 50' x 400'. A crane with calm shell bucket was used to demolish the cooling tower.

Chemical Plant Dismantling Process Units, Westwego LA, Contract Value $2,100,000: Asbestos abatement and demolition of a Boiler, Resin Plant, Ammonia Plant and various tanks in a tank farm. The work included the dismantling and demolition in various process units. Glass lined reactors were removed and salvaged for reuse as well as valves and electrical equipment.

Demolition of partially built nuclear power plant in SC, Contract Value $10,000,000: The work included the removal of concrete structures including the reactor building, generator building and support structures. The project was primarily concrete demolition, removing 125,000 tons of concrete with 8,000 tons of rebar. The concrete was crushed and stockpiled for the owner's use. The rebar was recycled as scrap.

Education, Licenses, Registrations and Training

- OSHA Supervisory Training
- OSHA 40-Hour HAZWOPER Training
- HAZWOPER Refresher Training
- Rigging Competent Person Training
- University of New Orleans, Undergraduate Studies Architectural Engineering

Matt Banta

SENIOR PROJECT MANAGER

Summary of Experience

Mr. Banta has been in the industry since 2010 and with NorthStar since 2013. He has managed various types of environmental remediation and demolition type projects. He also supervises demolition activities that include interior demolition, high value equipment removal, above and below grade demolition, industrial demolition, and clearing sites of all features as required complying with contracted responsibilities. Mr. Banta directly coordinates remediation and demolition crews to ensure project compliance while safely performing the work to allow the project to progress as planned as well as with general contractor and/or owner representatives.

Representative Project Experience

Duke Energy Crystal River Unit 3

The project consisted of demolishing the Turbine Hall (130' tall), Auxiliary Building (100' tall), Control Complex (60' tall), Intermediate Building (45' tall), above and below ground storage tanks, and several other miscellaneous buildings throughout the complex. Each of those structures had a 25' deep basement and were 3' to 4.5' thick concrete wall construction, with some portions 1.5" thick steel. NorthStar performed all the asbestos abatement throughout the facility and the RAD-contaminated concrete paint removal from the Auxiliary Building.

| Crystal River, FL | Nov 2021-Jul 2026 | $26,253,140 | Role on Project: Senior Project Manager

FPL Scholz Plant

Project consisted of Abatement and Demolition of a decommissioned coal powered plant facility. The dismantlement process consisted of a 330-ton crawler crane to dismantle the structure sections at a time as to not cause excess vibrations that may affect nearby coal ash pond.

| Sneads FL | Feb 2022-Jun 2024 | $17,062,590 | Role on Project: Senior Project Manager

Duke Energy Avon Park CT Plant

Abatement of caulking around base of structures was completed prior to demolition. Demolition was completed using two 350 series excavators equipped with shear, hammer, and bucket/thumb attachments to dismantle the two 3,100 SF structures. Torch cutters systematically disassembled the two turbines, expanders, and jet engines, including three spare expander components of the CTs.

| Avon Park FL | Aug 2021-Oct 2021 | $681,019 | Role on Project: Senior Project Manager

Duke Energy Crystal River Units 1 & 2

Project consisted of decommissioning all systems, structures, and components, abating all hazardous, non-hazardous, and regulated wastes, demolishing all structures down to 2’ below grade, recycling of all ferrous, non-ferrous, concrete, asphalt and returning all areas of the property back to a low-maintenance vegetation space.

| Crystal River, FL | Jun 2019-Jul 2023 | $42,165,000 | Role on Project: Senior Project Manager

FPL Fort Myers GTPP Project

Total demolition of 10 Gas Turbine Units as well as 2 buildings, slabs, foundations, underground utility lines and 4 large transformers. The site was brought back to a rough grade after demolition.

| Fort Myers, FL | Nov 2018-Aug 2019 | $3,909,250 | Role on Project: Senior Project Manager

FPL GTTP Sites 1,2 & 3

Project consisted of abatement and demolition of 9 buildings at 3 separate locations, boilers, and turbines. Once the vertical structures and equipment were demolished, we hammered, processed, and crushed all concrete foundations and slabs.

| Fort Lauderdale, FL | May 2017-Nov 2018 | $8,958,936 | Role on Project: Senior Project Manager

International Paper Recovery Boiler Precipitator #13
Removal of the precipitator and all associated equipment of said precipitator, including stacks, elevator shaft, and stairs down to elevation 146'.
| Savannah, GA | May 2016-Sep 2016 | $1,200,000 | Role on Project: Senior Project Manager

Gulf Power Plant Crist Facility
The project consisted of the removal of approximately 16,000 SF of asbestos containing duct insulation and 12,000 SF of asbestos containing boiler insulation and refractory. The demolition scope is comprised of removal of all piping associated with the boilers as well as drums, tubes, headers, catwalks, structural steel, and ductwork. This required significant crane and rigging associated with this project.
| Pensacola, FL | Jan 2013-Nov 2013 | $2,625,827 | Role on Project: Senior Project Manager

Eagle Point Refinery
Decommissioning, Abatement and Demolition of former refinery. Upon completion of removing all asbestos abatement, the demolition work was performed with the use of mechanical equipment. A total of 10 large pieces of equipment and operators to raze the facility and process the material.
| Westville, NJ | Nov 2011-Nov 2014 | $23,500,000 | Role on Project: Project Manager

Cargill Fructose Corn Syrup Plant
Plant decommissioning and demolition of this former fructose corn syrup manufacturing facility. Work included asbestos abatement of friable and non-friable insulation, floor tile and mastics, roofing, transite and other materials. The demolition portion consisted of four 6-story concrete and steel structures with process equipment totaling over 500,000 square feet and dozens of 40K gallon and smaller above ground storage tanks.
|Decatur, AL | Aug 2010-Apr 2011 | $5,878,585 | Role on Project: Project Manager

Education, Licenses, Registrations and Training

- OSHA 30-Hour Safety Training
- Asbestos Supervisor/Contractor Certification
- Lead Supervisor/Contractor Certification
- HAZWOPER 40-Hour Certification
- Fall Protection Training
- Confined Space Training
- First Aid and CPR Certifications
- Bachelor of Science Degree in Construction Management from University of Florida

Noel E. Sibrian

ABATEMENT OPERATIONS MANAGER

Summary of Experience

Mr. Sibrian's has been in the industry since 1987 and with NorthStar since 1995. His years of experience are in hazardous materials abatement and demolition, where he manages various types of environmental remediation/demolition type project. Mr. Sibrian has extensive knowledge in all areas of the hazardous remediation field including; asbestos, lead-based paints and components, PCB's, mercury and CFC gases and liquids, as well as contaminated soil remediation, oil and chemical waste segregation and disposal. His responsibilities on previous projects have included oversight and verification that all hazardous and regulated materials have been properly removed, characterized, and packaged for disposal prior to demolition activities. Mr. Sibrian also supervises demolition activities that include; utility identification and plugging, engineering surveys, above and below grade demolition, and clearing sites of all features as required complying with contracted responsibilities. He directly coordinates remediation/demolition crews to ensure project compliance while safely performing the work to allow the project to progress as planned.

Representative Project Experience

Duke Energy Crystal River Unit 3
Project consists of the demolition, abatement and decommissioning of the Nuclear 3 unit. Scope of work includes the interior gut of Control Complex, Auxiliary Building, Intermediate Building, Cold Shop, and Hot Shop prior to structural demolition.
| Crystal River, FL | Nov 2021-Jul 2026 | $26,253,140 | Role on Project: Abatement Operations Manager

GA Port Authority Ocean Terminal
Complete demolition of warehouse 1 (217,000 SF) and warehouse 3 (226,000 SF) slabs, foundations, pile caps, water tower and bridge pier.
| Savannah, GA | May 2024-Nov 2024 | $2,793,724 | Role on Project: Abatement Operations Manager

Good Samaritan Kissimmee Village
Abatement and Demolition
| Kissimee, FL | Apr 2023-Aug 2024 | $8,182,525 | Role on Project: Abatement Operations Manager

Southern Company/GA Power Plant McIntosh
Structural demolition of a retired coal powered facility. Project consisted of implosion preparation of a 400-foot chimney stack, boilers and the complete dismantlement of coal conveyor systems. As well as Abatement of asbestos found in duct work, floor tile, and roofing materials.
| Rincon, GA | Jan 2021-Nov 2022 | $10,783,695 | Role on Project: Abatement Operations Manager

Grizzly Energy Flomaton Plant
Project consisted of Abatement and Demolition of all systems, structures, and components, abating all hazardous, non- hazardous, and regulated wastes, demolishing all structures down to 3' below grade, recycling of all ferrous, non-ferrous, crush concrete onsite to be used as backfill. Backfill, reshape, and seed area.
| Flomaton, AL | Jul 2020-Feb 2021 | $1,735,165 | Role on Project: Abatement Operations Manager

Duke Energy Crystal River Plant Units 1 & 2
Project consisted of decommissioning all systems, structures, and components, abating all hazardous, non-hazardous, and regulated wastes, demolishing all structures down to 2' below grade, recycling of all ferrous, non-ferrous, concrete, asphalt and returning all areas of the property back to a low-maintenance vegetation space.
| Crystal River, FL | Jun 2019-Dec 2023 | $42,165,000 | Role on Project: Abatement Operations Manager

FPL Fort Myers GTPP Project
Total demolition of 10 Gas Turbine Units as well as 2 buildings, slabs, foundations, underground utility lines and 4 large transformers. The site was brought back to a rough grade after demolition.
| Fort Myers, FL | Nov 2018-Aug 2019 | $3,909,250 | Role on Project: Abatement Operations Manager

Daytona Int'l Speedway – Sprint Tower and Campbell Suites
Dismantlement of Tower and catwalk systems; as well as demolishing the Campbell Suites and Grandstands.
| Daytona Beach, FL | Mar 2015-Apr 2015 | $1,627,524 | Role on Project: Abatement Operations Manager

FPL Turkey Point Plant
Project included the removal of asbestos containing material as well as dismantlement of the existing stacks, tanks, boiler furnace, boiler structure, selected components, and equipment in and around the turbine and mezzanine decks on site.
| Homestead, FL | Oct 2014-Sep 2018 | $24,893,226 | Role on Project: Abatement Operations Manager

FPL Cutler Plant
Project consisted of removal and disposal of all asbestos containing materials and demolition of the Plant Facility and all associated support facilities. The two boiler tower units along with their associated stacks were felled by means of explosives.
| Miami, FL | Mar 2013-May 2014 | $8,040,834 | Role on Project: Abatement Operations Manager

Orlando Airport
Demolition consisted of selectetive interior demotion of ceilings, walls, duct work and steel structured roof componants. Demolition was also performed on the exterior including pre cast walls,glass store front and existing skylight systems.
| Orlando, FL | Jun 2007-Apr 2010 | $3,088,021 | Role on Project: Abatement Operations Manager

3M Decatur Plant
Decommissioning, remediation, and demolition of Buildings 2, 48 and 49 at the operational Plant. Project tasks also included the removal of all asbestos-containing materials (transite, insulation, floor tile, and mastics) prior to the demolition activities.
| Decatur, AL | Aug 2009-Apr 2010 | $1,547,629 | Role on Project: Abatement Operations Manager

Armed Forces Retirement Home
Over 150,000 SF of asbestos-containing materials were removed.The second phase of the project included interior gut-out of the first floor and demolition of approximately 75,000 SF of surrounding structures.
| Gulfport, MS | Sep 2007-Dec 2007 | $4,325,675 | Role on Project: Abatement Operations Manager

Education, Licenses, Registrations and Training

- OSHA 30 Safety Training
- Asbestos Supervisor/Contractor Certification
- Asbestos Building Inspection Certification

Mauro Bravo

ABATEMENT SUPERINTENDENT

Summary of Experience

Mr. Bravo has experience in the construction and abatement industry since 1995 and with NorthStar since 2014. His expertise includes managing projects of varying scopes, overseeing both large and small crews, and ensuring workplace safety through conducting safety meetings, addressing potential hazards, and performing thorough safety inspections. At NorthStar, Mr. Bravo's responsibilities focus on developing and implementing safety protocols and work plans tailored to abatement and construction projects. His portfolio includes work at airports, military bases, Walt Disney World, and power plants, demonstrating his commitment to safety and project efficiency.

Representative Project Experience

Duke Energy Crystal River Unit 3

The project consisted of demolishing the Turbine Hall (130' tall), Auxiliary Building (100' tall), Control Complex (60' tall), Intermediate Building (45' tall), above and below ground storage tanks, and several other miscellaneous buildings throughout the complex. Each of those structures had a 25' deep basement and were 3' to 4.5' thick concrete wall construction, with some portions 1.5" thick steel. NorthStar performed all the asbestos abatement throughout the facility and the RAD-contaminated concrete paint removal from the Auxiliary Building.

| Crystal River, FL | Nov 2021-Jul 2026 | $26,253,140 | Role on Project: Abatement Supervisor

USG Kettles 5 & 6, Packing Area, Rock Mill System

Project included the complete demolition and removal of Kettles along with the Raymond Mill System, and involved removal of a 10-foot diameter, 35-foot-tall tank.

| Jacksonville, FL | Jan 2022-Jul 2023 | $5,725,863 | Role on Project: Abatement Supervisor

Ritz Carlton Hotel -Various Projects

NorthStar undertook four contracts at the Ritz Carlton Beach Hotel in Naples, FL, spanning a three-year period, encompassing various interior and exterior renovation and construction projects.

| Naples, FL | May 2021-Oct 2024 | $6,084,637 | Role on Project: Demolition Supervisor

Buddy Taylor MS Gymnasium

Removal of Mercury-Containing Polymer flooring by creating a containment system utilizing poly sheeting and negative air pressure to confine any airborne contaminants within the work area. Fiberlock LBC was administered to the concrete substrate to not only encapsulate any residual contaminants but also to fortify and prepare the surface for future flooring applications.

| Palm Coast, FL | Jul 2020-Aug 2020 | $112,800 | Role on Project: Abatement Supervisor

Cocoa Sunrise Terrace

Abatement of Cat 1 friable materials using a system of a poly prep crew and a removal crew for the 1, 2, and 3-bedroom units.

| Cocoa, FL | Dec 2019-Jan 2020 | $124,800 | Role on Project: Abatement Supervisor

SPC Plant Additional Abatement

Work included the removal of asbestos-containing floor tiles, mastic, roofing materials, caulking, and acoustic textures across multiple buildings.

| Pensacola, FL | Oct 2019-Dec 2019 | $262,610 | Role on Project: Abatement Supervisor

GSA Courthouse Interior Repairs
Asbestos Abatement, lead stabilization, mold remediation and selective demolition for the federal courthouse. NorthStar removed suspended ceilings so that lead painted ceilings and pipe insulation above could be removed as part of the abatement.
| Rosa Beach, FL | Apr 2019-Nov 2019 | $182,865 | Role on Project: Abatement Supervisor
USG Jacksonville West Bin Tower
Demolition of 3-story west bin and screw elevator structure down to slab. Steel structure was demolished with lead-based paint. Structure was taken down with proper engineering controls and PPE.
| Jacksonville, FL | Jan 2019-Feb 2019 | $135,800 | Role on Project: Abatement Supervisor

Education, Licenses, Registrations and Training

- Asbestos Supervisor / Contractor Certification
- Lead Supervisor / Contractor Certification
- Mold Supervisor / Contractor Certification
- OSHA 30-Hour Safety Training
- First Aid and CPR Certifications
- HAZWOPER 40-Hour Certification
- Fall Protection Training
- Confined Space Training

Fernando Torres

ABATEMENT SUPERINTENDENT

Summary of Experience

Mr. Torres's has been in the industry since 2005 and with NorthStar since 2008. His years of experience are in hazardous materials abatement and demolition, where he manages various types of environmental remediation/demolition type projects. Mr. Torres has extensive knowledge in all areas of the hazardous remediation field including asbestos, lead-based paints and components, PCB's, mercury and CFC gases and liquids, as well as contaminated soil remediation, oil and chemical waste segregation and disposal. His responsibilities on previous projects have included oversight and verification that all hazardous and regulated materials have been properly removed, characterized, and packaged for disposal prior to demolition activities. Mr. Torres directly coordinates remediation/demolition crews to ensure project compliance while safely performing the work allowing the project to progress as planned.

Representative Project Experience

MACALJON US Sugar

Abatement of asbestos containing TSI on 42 tanks at US Sugar Char House 2nd floor. Demolition of the 42 tanks after abatement.

| Savannah, GA | Sep 2024-Jan 2025 | $769,817 | Role on Project: Superintendent

FPL Scholz Plant

Project consisted of abatement and demolition of a decommissioned coal powered plant facility. The dismantlement process consisted of a 330-ton crawler crane to dismantle the structure sections at a time as to not cause excess vibrations that may affect nearby coal ash pond.

| Sneads, FL | Feb 2022-Nov 2023 | $17,062,590 | Role on Project: Superintendent

Tesecon Evonik ACM Plant

Project consisted of demolition of structural steel process building, piping as well as concrete slabs and foundations down to 3' below grade, recycling of all ferrous, non-ferrous. Backfilled and compacted to make site level and drain.

| Theodore, AL | Oct 2021-Feb 2022 | $2,127,309 | Role on Project: Superintendent

RC Stevens Refresco Beverages

Project consisted of demolition of existing metal/iron/diamond plate floors, mezzanine, catwalks and stairs in process building. Using oxy/propane torch cutting rigs, men torch cut this metal decking system down, piece-by-piece.

| Lakeland, FL | Mar 2021-Apr 2021 | $172,501 | Role on Project: Superintendent

Grizzly Energy Flomaton Plant

Project consisted of abatement and demolition of all systems, structures, and components, abating all hazardous, non- hazardous, and regulated wastes, demolishing all structures down to 3' below grade, recycling of all ferrous, non-ferrous, crush concrete onsite to be used as backfill. Backfill, reshape, and seed area.

| Flomaton, AL | Jul 2020-Feb 2021 | $1,735,165 | Role on Project: Superintendent

Duke Energy Crystal River Plant Units 1 & 2

Project consisted of decommissioning all systems, structures, and components, abating all hazardous, non-hazardous, and regulated wastes, demolishing all structures down to 2' below grade, recycling of all ferrous, non-ferrous, concrete, asphalt and returning all areas of the property back to a low-maintenance vegetation space.

| Crystal River, FL | Jun 2019-Dec 2023 | $42,165,000 | Role on Project: Superintendent

NV2A Bostick ICU
NorthStar performed interior demolition of an unoccupied space at the 2nd level as well as demolition of existing parapet framing, exterior metal cladding and roof demolition for structural steel tie-ins.
| Winter Heaven, FL | Jan 2019-Apr 2019 | $157,378 | Role on Project: Superintendent

DPR Construction Disney- Cirque du Solei Job# 4718050
Project consisted of selective structural demolition of building towers, high wire platforms, catwalk extensions and trapeze apparatus.
| Orlando, FL | May 2018-Dec 2019 | $428,065 | Role on Project: Superintendent

Barton Malow Disney -Project Sausalito
Project consisted of full interior gut of building with riding equipment and building structure to remain.
| Orlando, FL | Sep 2017-Dec 2018 | $1,778,800 | Role on Project: Superintendent

PCL Disney Caribbean Beach Resort
Project consisted of demolition of building structures and components along with recycling of all ferrous concrete.
| Orlando, FL | May 2017-Jul 2017 | $1,218,315 | Role on Project: Superintendent

Balfour Beatty Disney -Coronado Springs
Project consisted of dismantlement of the Coronado Hotel structures in order for the remodel to be constructed.
| Orlando, FL | Mar 2017-Jul 2019 | $506,670 | Role on Project: Superintendent

USG Jax Kiln
Project consisted of abatement of TSI, Vessel, boilers, and siding removal.
| Jacksonville, FL | Jan 2015-Mar 2015 | $218,800 | Role on Project: Superintendent

Doster Construction Swann 8th
Project consisted of demolition of entire floor, ACM removal and creating exterior wall openings.
| Winter Heaven, FL | Oct 2014-Jan 2015 | $202,569 | Role on Project: Superintendent

TECO Gannon Station Unit #5 Dismantlement
Abatement and demolition of a decommissioned coal powered plant unit. The dismantlement process consisted of dismantling the structure sections at a time as to not cause excess vibrations that may affect nearby Turbine operation.
| Tampa, FL | Aug 2013-Jul 2014 | $3,835,451 | Role on Project: Superintendent

Doster Construction RSA Building
Project consisted of ACM abatement, and structural demolition of the building and components.
| Mobile, AL | Sep 2009-Apr 2012 | $2,300,000 | Role on Project: Superintendent

City of Palatka Frank George Apartments
ACM abatement, structural demolition of building and components along with recycling of all ferrous/non-ferrous concrete asphalt.
| Palatka, FL | Jun 2008-Nov 2008 | $565,407 | Role on Project: Superintendent

Education, Licenses, Registrations and Training

- OSHA 30-Hour Safety Training
- Asbestos Supervisor/Contractor Certification
- Lead Supervisor/Contractor Certification
- HAZWOPER 40-Hour Certification
- Fall Protection Training
- Confined Space Training
- Rigging Certification
- First Aid and CPR Certifications

Jason Ogden

DEMOLITION OPERATIONS MANAGER

Summary of Experience

Mr. Ogden has been in the industry since 2003 and with NorthStar since 2007 focusing on demolition and environmental management. He has been responsible for the completion of over 500 projects ranging from single family residences to the demolition of industrial facilities, bridges, power stations, sewer treatment plants, interior demolition, and partial building demolition. Mr. Ogden is well versed in the management and coordination of complex facility closures, accelerated completion schedules, congested and restrictive work areas and heavily populated areas.

Representative Project Experience

Duke Energy Crystal River Unit 3

The project consisted of demolishing the Turbine Hall (130' tall), Auxiliary Building (100' tall), Control Complex (60' tall), Intermediate Building (45' tall), above and below ground storage tanks, and several other miscellaneous buildings throughout the complex. Each of those structures had a 25' deep basement and were 3' to 4.5' thick concrete wall construction, with some portions 1.5" thick steel. NorthStar performed all the asbestos abatement throughout the facility and the RAD-contaminated concrete paint removal from the Auxiliary Building.

| Crystal River, FL | Nov 2021-Jul 2026 | $26,253,140 | Role on Project: Demolition Operations Manager

GA Port Authority Ocean Terminal

Complete demolition of warehouse 1 (217,000 SF) and warehouse 3 (226,000 SF) slabs, foundations, pile caps, water tower and bridge pier.

| Savannah, GA | May 2024-Nov 2024 | $2,793,724 | Role on Project: Demolition Operations Manager

Good Samaritan Kissimmee Village

The project conssisted of abatement and demolition of 45 single story quad unit structures due to hurricane flooding. 30,000 tons of concrete generated on the project was crushed on site and sold for re-use.

| Kissimmee, FL | Apr 2023-Aug 2024 | $8,182,525 | Role on Project: Demolition Operations Manager

Plant Branch Skills Center

Project involved the demolition of nine single-story structures, totaling 32,330 square feet, on a site spanning seven acres. In addition to the building demolition, all associated structural concrete slabs, sidewalks, and parking areas, covering a total of 86,410 square feet were removed.

| Milledgeville, GA | Oct 2022-Jan 2023 | $1,543,127 | Role on Project: Demolition Operations Manager

WMS1 Distribution Center

NorthStar provided selective interior/exterior demolition of this facility. Using skid steers and mini excavators, over 7,800 lf of walls were removed, along with a 3k sf mezzanine structure. A variety of openings were provided in the exterior wall for new RUD's/ped doors. Shoring was installed for safety.

| Jackson, MS | Oct 2022-Mar 2023 | $933,087 | Role on Project: Demolition Operations Manager

Pompano Park Grandstand

Project consisted of complete demolition of the 5 story, 396,000 SF grandstand building overlooking the horse track, along with adjacent hardscapes and landscapes.Pror to demolition activities, the building materials were abated and the interior of the building was gutted.

| Pompano Beach, FL | Jun 2022-Jun 20231 | $2,153,649 | Role on Project: Demolition Operations Manager

Camping World Stadium

Project consisted of removing precast stadium seating panels from the mid-bowl level of the stadium on the east and west sides. Precast concrete sections were removed via crane.

| Orlando, FL | Jan 2021-Jun 2021 | $1,491,927 | Role on Project: Demolition Operations Manager

FPL Martin Plant Units 1 & 2
Controlled dismantlement (everything on the hook) and removal of boilers and steam turbines with all associated facilities including oil storage tanks, transfer pumps, piping, air preheaters, gas ducts, electrostatic precipitators and chimneys. Abatement of all friable and non-friable asbestos containing material.
| Indiantown, FL | Aug 2020-Dec 2023 | $55,196,966 | Role on Project: Demolition Operations Manager

Duke Energy Crystal River Plant Units 1 & 2
Project consisted of decommissioning all systems, structures, and components, abating all hazardous, non-hazardous, and regulated wastes, demolishing all structures down to 2' below grade, recycling of all ferrous, non-ferrous, concrete, asphalt and returning all areas of the property back to a low-maintenance vegetation space
| Crystal River, FL | Jun 2019-Dec 2023 | $42,165,000 | Role on Project: Demolition Operations Manager

FPL Martin Storeroom
Demolition of warehouse structure in it's entirety including concrete and asphalt.
| Indiantown, FL | Mar 2019-Mar 2019 | $328,319 | Role on Project: Demolition Operations Manager

UCF Library 1-A
Removal of all interior finishes within the library on all 4 levels as well as exterior demolition of the concrete and brick. Multiple wall openings were created for new doors and mechanical ducting.
| Orlando, FL | June 2018-Feb 2019 | $364,027 | Role on Project: Demolition Operations Manager

Disney Caribbean Beach Resort
Interior gut of 576 rooms in addition to demolishing 12 exterior building areas.
Demolition | Orlando, FL | May 2017-Jul 2017 | $1,287,500 | Role on Project: Demolition Operations Manager

Reedy Creek RCID RMPF
Demo of three structures down to slab.
Demolition | Orlando, FL | Aug 2017-Jul 2018 | $124,370 | Role on Project: Demolition Operations Manager

Daytona Int'l Speedway – Sprint Tower and Campbell Suites
Dismantlement of Tower and catwalk systems; as well as demolishing the Campbell Suites and Grandstands.
| Daytona Beach, FL | Mar 2015-Apr 2015 | $1,627,524 | Role on Project: Demolition Operations Manager

FPL Cutler Plant
Project consisted of removal and disposal of all asbestos containing materials and demolition of the Plant Facility and all associated support facilities. The two boiler tower units along with their associated stacks were felled by means of explosives.
| Miami, FL | Mar 2013-May 2014 | $8,040,834 | Role on Project: Demolition Operations Manager

Gulf Power Plant Crist Facility
The project consisted of the removal of approximately 16,000 SF of asbestos containing duct insulation and 12,000 SF of asbestos containing boiler insulation and refractory. The demolition scope is comprised of removal of all piping associated with the boilers as well as drums, tubes, headers, catwalks, structural steel, and ductwork. This required significant crane and rigging associated with this project.
| Pensacola, FL | Jan 2013-Jan 2014 | $2,625,827 | Role on Project: Demolition Operations Manager

Copart Demolition-ACCO
This project consisted of the complete demolition of 2 150,000 SF steel structure buildings with the slab to reamain.
| Apopka, FL | Aug 2011-Dec 2011 | $735,246 | Role on Project: Demolition Operations Manager

Walter Coke Plant
Demolition of multiple steel building structures, steel tanks, and concrete constructed silos.
| Birmingham, AL | Aug 2010-Dec 2010 | $177,800 | Role on Project: Demolition Operations Manager

Orlando Airport
Demolition consisted of selectetive interior demotion of ceilings, walls, duct work and steel structured roof componants. Demolition was also performed on the exterior including pre cast walls,glass store front and existing skylight systems.
| Orlando, FL | Jun 2007-Apr 2010 | $3,088,021 | Role on Project: Demolition Operations Manager

Education, Licenses, Registrations and Training

- OSHA 30-Hour Safety Training
- Equipment Safety Operator Certifications
- Confined Space Training
- Fall Protection Training

- Excavation and Trench Competent Person Awareness Training

Luis Rodriguez

DEMOLITION SUPERINTENDENT

Summary of Experience

Mr. Rodriguez has been with NorthStar since 2010, bringing in over a decade of expertise in hazardous materials abatement, demolition, and equipment operation. He possesses extensive knowledge across the hazardous remediation field, including the handling of asbestos, lead-based paints and components, PCBs, mercury, CFC gases and liquids, contaminated soil remediation, and the segregation and disposal of oil and chemical waste.

Mr. Rodriguez has overseen and verified the proper removal, characterization, and packaging of hazardous and regulated materials for disposal prior to demolition. Additionally, he supervises demolition activities, which include utility identification and sealing, engineering surveys, above- and below-grade demolition, and site clearing to meet contractual requirements. He also coordinates remediation and demolition crews to ensure compliance with project standards, prioritizing safety, and efficiency to maintain project timelines.

Representative Project Experience

Duke Energy Crystal River Unit 3

The project consisted of demolishing the Turbine Hall (130' tall), Auxiliary Building (100' tall), Control Complex (60' tall), Intermediate Building (45' tall), above and below ground storage tanks, and several other miscellaneous buildings throughout the complex. Each of those structures had a 25' deep basement and were 3' to 4.5' thick concrete wall construction, with some portions 1.5" thick steel. NorthStar performed all the asbestos abatement throughout the facility and the RAD-contaminated concrete paint removal from the Auxiliary Building.

| Crystal River, FL | Nov 2021-Jul 2026 | $26,253,140 | Role on Project: Superintendent

GA Port Authority Ocean Terminal

Complete demolition of warehouse 1 (217,000 SF) and warehouse 3 (226,000 SF) slabs, foundations, pile caps, water tower and bridge pier.

| Savannah, GA | May 2024-Jun 2025 | $2,793,724 | Role on Project: Superintendent

Southern Company/GA Power Plant McIntosh

Structural demolition of a retired coal powered facility. Project consisted of implosion preparation of a 400-foot chimney stack, boilers and the complete dismantlement of coal conveyor systems. As well as Abatement of asbestos found in duct work, floor tile, and roofing materials.

| Rincon, GA | Jan 2021-Nov 2022 | $10,783,695 Role on Project: Superintendent

EPOCH Aloma

Asbestos floor mastic was abated within the structure prior to demolition. Demolition of 6 buildings spanning 50,000 SF encompassing a church and associated structures. After demolition, NorthStar cleared the site of trees, concrete hardscapes and asphalt parking lots.

| Winter Park, FL | Jun 2020-Jul 2020 | $168,886 | Role on Project: Superintendent

Hensel Phelps Tampa International Airport

Complete demolition of the car rental facility and 3 pedestrian bridges adjoining the parking structure to the main terminal. Using crane rigging, NorthStar safely removed a portion of the bridge sections to not disturb columns that were to remain. The rest were demolished with excavators and concrete pulverizers.

| Tampa, FL | Jul 2019-Apr 2020 | $1,193,843 | Role on Project: Superintendent

George W. Marks Elementary
Demolition of 15 buildings totaling 55,000 SF consisting of canopies, hardscapes, fencing, HVAC units, sheds, flag poles, and backstops.
| Deland, FL | Feb 2019-Aug 2019 | $178,453 | Role on Project: Superintendent

Education, Licenses, Registrations and Training

- OSHA 30-Hour Safety Training
- Asbestos Supervisor/Contractor Certification
- Lead Supervisor/Contractor Certification
- HAZWOPER 40-Hour Certification
- Fall Protection Training
- Confined Space Training
- First Aid and CPR Certifications

Ronald “RD” Harris

DEMOLITION SUPERINTENDENT

Summary of Experience

Mr. Harris has been in the industry and with NorthStar since 2019, specializing in large-scale demolition, asset recovery, and dismantlement. His responsibilities encompass overseeing field operations and managing crews for complex industrial projects, ensuring efficiency and safety throughout the process. Mr. Harris supervises a range of demolition activities including above and below ground demolition, and site preparation. He excels at coordinating recovery and demolition teams, ensuring strict compliance with project requirements and maintaining workplace safety. His proven ability to manage challenging projects makes him a trusted leader in the field.

Representative Project Experience

GA Port Authority Ocean Terminal

Complete demolition of warehouse 1 (217,000 SF) and warehouse 3 (226,000 SF) slabs, foundations, pile caps, water tower and bridge pier.

| Savannah, GA | May 2024-Nov 2024 | $2,793,724 | Role on Project: Superintendent

Disposal Location and Transportation Plan

Attachment E

Disposal Location and Transportation Plan

Construction Debris→ Perdido Landfill (Map 1)	
Disposal Facility	**Hauler**
Escambia County Perdido Landfill	Eager Beaver
13009 Beulah Rd	2170 Long Leaf Dr
Cantonment FL 32533	Pensacola FL 32506
EPA ID # FLD982120131	
Permit # 0000667-038-SO-01	Contact: HC Jacques III
Contact: Ryan Cummins	Phone: (850) 912-8040
Phone: (850) 937-2152	

Disposal Methods:
Eager Beaver will transport all non-contaminated, non-recyclable construction and demolition debris to the Escambia County Perdido Landfill. This includes materials that have been verified through testing and inspection to be free of any regulated substances such as asbestos, lead, or other hazardous materials. Only debris that cannot be salvaged or recycled will be disposed of at this facility. Transportation will be conducted using 50-70 CY High Side Dump Trailers to efficiently move large volumes of construction debris from the site to the landfill.

Universal Recycling Technologies, LLC (URT)	Universal Waste Services
2645 Sylvania Cross Dr.	(Coordinated through Republic Services)
Fort Worth, TX 76137	2910 N Palafox St
EPA ID TXR000086069	Pensacola, FL 32501
Phone: (607) 321-9601	Phone: (850) 208-1687

Disposal Methods:
Republic Services will provide appropriate containers and boxes for the collection and packaging of all universal waste materials, including fluorescent light bulbs (44,072 units), PCB and non-PCB ballasts (21,538 units), batteries from emergency systems, and mercury-containing devices. Once these materials are properly packaged and documented, Republic Services will coordinate with Universal Waste Services to transport the materials to the URT facility in Texas for final processing and recycling.

1.0 INTRODUCTION

The NorthStar Contacting Group, Inc. [NCG] goal is to complete the project without any type of incident (injury, illness, impact to the environment, property damage, and equipment). Utilizing the NCG Target Zero Program (our Health & Safety program that strives to change the H&S Culture) the project team shall work together to perform an effective hazard assessment (Activity Hazard Analysis) for each operation and review the assessments with the crew prior to the operation commencing.

The purpose of this Site-Specific Health and Safety Plan (SSHASP) is to proactively aid, create, and ensure a safe and healthy site for NorthStar Contracting Group, Inc. [NCG] employees, subcontractors, and the environment during abatement / deconstruction operations associated with the Former Baptist Complex Project.

This SSHASP identifies hazards and the corresponding safety procedures and controls necessary to minimize injuries, property damage, and liability risks for all involved in this project. This SSHASP is intended to meet the requirements of Federal, State, and local regulations, and is designed to identify, evaluate, and control health and safety hazards related to NCG employees. This SSHASP incorporates, by reference, the applicable OSHA requirements in 29CFR1926.

The requirements and guidelines in this SSHASP are based on a review of available information and evaluation of potential on-site hazards. The requirements of this SSHASP will be communicated to site personnel and will be available on-site for review.

1.1 PERSONNEL

This SSHASP is specifically intended for NCG personnel, subcontractors, and visitors who shall be responsible for and conducting activities within their specific scope of work at this Project. The people listed below are responsible for complying with all required regulations such as Occupational Safety & Health Administration (OSHA), NCG Corporate Health & Safety Manual and this SSHASP. This SSHASP may be provided to interested parties for informational purposes; however, the SSHASP is specifically intended for NCG, and subcontractors scope of work as described in the project specifications and project drawings provided by our client.

Future actions that may be conducted at this site and unexpected conditions that may be encountered may necessitate the modification of this SSHASP. The PM and SSM shall recommend modifications to the Regional Health & Safety Manager (RHSM). The RHSM shall evaluate the recommendations and make appropriate modifications to this plan. Modifications shall be documented in a revised SSHASP and reviewed with the project crew during the daily Health & Safety Briefing

1.2 NCG PROJECT PERSONNEL

Name	Title	Cell Phone
John Jenkins	Project Executive	407.209.8757
John Ryan	Regional Health & Safety Manager (RHSM)	781.953.4029
Matt Banta	Senior Project Manager (PM)	321.388.8247
Jason Ogden	Demolition Operations Manager	407.394.9560
Noel Sibrian	Abatement Operations Manager	972.880.1050
Luis Rodriguez	Demolition Superintendent (PS)	786.502.0463
Fernando Torres	Abatement Superintendent (PS)	407.738.5440
Robert Najera	Site Safety Manager (SSM)	336.303.6780

1.3 RESPONSIBILITIES

As directed in this SSHASP, safety related information would generally be addressed first by the PM Matt Banta and the SSM Robert Najera. All injuries and incidents will be immediately reported to the client site representative(s). Formal injury/incident reports shall be submitted to the RHSM, Project Executive, Project Manager, and client representative within 24 hours. In addition, the SSM will maintain daily Safety Logs that will periodically be reviewed by the RHSM.

Project Manager:

The Project Manager (PM) is responsible for working with the Project Superintendents and subcontractors to ensure timeframes are being met coordinate site activities with field personnel, equipment and material suppliers, and engineer(s).

Regional Health & Safety Manager:

The Regional Health and Safety Manager (RHSM) is responsible for the overall safety of the project and coordinating the required training. In addition to the safety briefings, documented weekly toolbox talks shall be conducted. Project Health & Safety Audits shall also be completed for all NCG operations and work areas as well as subcontractor work areas. The RHSM is also responsible for the implementation of the SSHASP.

Project Superintendent:

The Project Superintendent (PS) is responsible for managing the supervisors and foremen during daily activities. The PS is also responsible for the implementation of the SSHASP, implementing all H&S requirements and conducting daily safety briefings.

The Health & Safety Team (SSM and RHSM), Project Superintendents, Operation Supervisors, Foremen, and Project Manager have the authority to:

Direct NCG employees and their subcontractors to alter work practices that are deemed not sufficiently protective of human health or the environment.

Suspend field activities or take other measures to reduce potential exposure if the environment and or the health and safety of any person appear to be endangered.

However, regardless of the presence of the above-mentioned personnel, it shall in no way relieve any person or organization of its obligation to comply with all applicable federal, state, local and project specific safety requirements.

All Subcontractors to NCG are covered under this SSHASP or their own. They will need to designate their own PS. These individuals will be required to be always on-site if the subcontractor has employees performing work for NCG. This individual must also possess a sound working knowledge of pertinent OSHA regulations, this SSHASP, and other applicable Federal, State, and local Health and Safety requirements.

2.0 – Scope of Work Summary

2.1 – SCOPE OF WORK

NorthStar's scope of work is the abatement and demolition of the Former Baptist Complex.

2.2 – PROJECT PREPARATION

As part of NCG's strategic planning for this project, we will conduct the following activities:

- Complete Engineering Survey per OSHA regulations (Regional Health & Safety Manager, Project Manager, and Site Supervisor.)
- Obtain necessary permits.
- Develop task AHAs.
- Develop site specific lead / silica compliance programs.
- Develop comprehensive site-specific HASP (Contained herein)

2.3-MOBILIZATION

- Medical monitoring will follow 29 CFR 1910.134.
- NCG site orientation and safety indoctrination.
- Identify all existing hazards.
- Delivery and storage of equipment and supplies.
- Isolate work zone via barricades, signs, or tape.
- NCG will verify that all utilities have been identified and marked or terminated i.e., electric, gas, etc.

3.0 – Standard Operating Procedures

This SSHASP has been developed in accordance with the requirements set forth in 29CFR1926 and NCG Corporate Health and Safety Program. The purpose of this SSHASP is to assign site-specific responsibilities, site-specific training requirements, establish site-specific PPE, and to provide guidance for scope-specific contingencies that may arise for NCG and subcontractor employees. In addition to this SSHASP, a copy of the NCG corporate H&S Program will be kept on-site for reference purposes. All NCG personnel and subcontractor personnel must be familiar with this SSHASP prior to participation in site activities. All personnel must read the SSHASP and sign the Pre-work briefing document to acknowledge they have read and understand the requirements.

Standard operating procedures and safety guidelines for activities are found within the:

- NCG Corporate H&S Program
- NCG Site Specific Work Plans

These documents provide guidance on all activities including personnel training, PPE, medical surveillance, air monitoring, respiratory protection, and site control.

In addition, the following safety considerations will be followed:

- Prior to commencing work each day, NCG superintendent will conduct a daily huddle /AHA meeting with all workers.
- A daily crew JSA will be completed for their specific task.
- NCG personnel and subcontractor personnel, and third-party personnel will have attended the NCG safety orientation prior to work at the site.

3.1- PCB MATERIALS

The scope of this procedure is to provide employees with fundamental information regarding the safe use, storage, handling, and cleanup of PCBs as related to operational applications. The primary focus of this procedure is to minimize incidental contact with any PCBs if it is released from damaged equipment.

A typical pre-1979 PCB-containing fluorescent light ballast (FLB)

A typical Non-PCB containing fluorescent light ballast. The ballast has a "No PCBs" marking on the top of the ballast and the text "electronic ballast". Only magnetic fluorescent light ballasts contained PCBs.

TRAINING / CERTIFICATION

All NCG employees assigned to this project have completed the OSHA 10- or 30-Hour Construction Training; Respiratory Protection; Lead in Construction; NCG Site Orientation; PCB Training; 40 hour HAZWOPER training; and Hazardous Communication Training. Employees will receive medical examinations and be fit tested in accordance with 29 CFR 1910.134.

Occupational exposure to PCB's and the unique hazards associated with this operation will be an ongoing topic in our daily huddle meetings and crew specific JSAs throughout the course of this project.

PERSONAL PROTECTIVE EQUIPMENT

PCB ballast removal: Disposable protective clothing, hardhat, safety shoes, eye protection, hearing protection and A6 gloves / A7 sleeves.

PCB leaking ballasts: Half face or full-face air-purifying respirators with P100/OV filters, disposable protective clothing (Coated Tyvek), hardhat, safety shoes, eye protection, hearing protection and A6 and neoprene gloves / A7 sleeves.

Caulking Removal: Half face or full-face air-purifying respirators with P100/OV filters, disposable protective clothing (Coated Tyvek), hardhat, safety shoes, eye protection, hearing protection and A6 and neoprene gloves / A7 sleeves.

Coating Removal: Half face or full-face air-purifying respirators with P100/OV filters, disposable protective clothing (Coated Tyvek), hardhat, safety shoes, eye protection, hearing protection and A6 and neoprene gloves / A7 sleeves.

REGULATED AREA

Each work area must be demarcated and regulated with appropriate warning signs. Access to PCB regulated areas must be limited to authorized personnel only.

No eating, drinking, smoking, chewing, or applying cosmetics are permitted in any regulated area.

The proper handling method for PCB containing ballasts depends on the condition of the ballasts. A puncture or other damage to ballast exposes an oily tar-like substance. If this substance contains PCBs the ballast and all material it contacts are considered PCB waste and are subject to the "Toxic Substances Control Act" (TSCA).

BALLAST REMOVAL

- Only authorized personnel will be permitted in the area.
- Verify that electrical power has been disconnected.
- All ballasts will be inspected for leakage before they are removed.
- Ballast that is not leaking will be cut free and placed into a properly labeled DOT approved steel drum.
- Drums will be transported to the designated storage area for transportation and disposal.

LEAKING BALLAST REMOVAL

- Only authorized personnel will be permitted in the area.
- Verify that electrical power has been disconnected.
- The area will be adequately ventilated.
- Ballasts will be cut free and placed into a properly labeled DOT Spec 17C drum. That has been lined with absorbent material.
- Drums will be transported to the designated storage area for transportation and disposal.

CAULKING REMOVAL

- Only authorized personnel will be permitted in the area.
- Utilizing handheld sprayer moisten materials prior to removal.
- Using hand tools free the caulking.
- All waste will be properly packaged.

COATING REMOVAL

- Only authorized personnel will be permitted in the area.
- Utilizing HEPA equipped floor grinders remove floor coating as needed.
- HEPA vacuum and wipe down removal area.
- Using hand tools free the caulking.
- All waste will be properly packaged.

DECONTAMINATION

The personnel decontamination unit will be placed adjacent to the work area. Workers will wash their hands and face thoroughly with soap and water when exiting the work area. Respirators will be cleaned thoroughly in accordance with the procedures detailed in the respirator protection program. Contaminated rags and PPE (disposable coveralls, gloves, booties, etc.) shall be disposed of at the decontamination station in a lined DOT approved 55-gallon steel drum.

STORAGE

Store liquid PCBs in Department of Transportation (DOT) Specification 17E drums. Store non-liquid PCB mixtures, articles, or equipment in DOT Specification 5, 5B, or 17C drums with removable heads. All drums shall be stored in a secure area demarcated and regulated with appropriate warning signs.

SPILL CLEAN-UP

A spill could occur if a drum of PCB-containing waste material were to break open for any reason and allow the PCBs to enter the atmosphere.

- Nature and the Extent of Contamination - In the event of an emergency exposure, the nature and extent of the contamination would have to be determined immediately. This will be accomplished in two ways, by determining the contaminants present and by sampling and analysis.

- Contaminants Present - The primary contaminant present within the work area at this location is Polychlorinated Biphenyls (PCBs) dielectric fluid from ballasts. Spill cleanup procedures will conform to the requirements of TSCA's 40 CFR 761.125.

3.2 - MERCURY CONTAINING EQUIPMENT

The scope of this procedure is to provide affected employees with fundamental information regarding the safe use, storage, handling, and clean-up of Mercury as related to operational applications. The primary focus of this procedure is to minimize incidental contact with Mercury if it is released from damaged equipment.

REGULATED AREA

Each work area must be demarcated and regulated with appropriate warning signs. Access to Mercury regulated areas must be limited to authorized personnel only.
No eating, drinking, smoking, chewing, or applying cosmetics are permitted in any regulated area.

TRAINING / CERTIFICATION

All NCG employees assigned to this project have completed the OSHA 10- or 30-Hour Construction Training; Respiratory Protection; Lead in Construction; NCG Site Orientation; Mercury Awareness; PCB Training; 40 Hour HAZWOPER training, and Hazardous Communication Training. Employees will receive medical examinations and be fit tested in accordance with 29 CFR 1910.134.

PERSONAL PROTECTIVE EQUIPMENT

Light tube removal: **Disposable** protective clothing, hard-hat, safety shoes, eye protection, hearing protection and A6 gloves / A7 sleeves.

Spill clean-up: Half face or full-face air-purifying respirators with P100/Hg filters (ESI), disposable protective clothing (Tyvek), hard hat, safety shoes, eye protection, hearing protection and A6 and nitrile gloves / A7 sleeves.

HANDLING MERCURY

- Only authorized personnel will be permitted in the area.
- Verify that electrical power has been disconnected.
- All lighting tubes shall be removed and placed in the appropriate box.
- Mercury thermostats shall be cut free and placed into a plastic container.
- Mercury shall only be handled in adequately ventilated areas.
- Mercury shall not be handled near flame or heat.
- When Mercury thermostats are being transported, they shall be carried in the appropriate plastic container(s).

DECONTAMINATION

The personnel decontamination unit will be placed adjacent to the work area. Workers will wash their hands and face thoroughly with soap and water when exiting the work area. Respirators will be cleaned thoroughly in accordance with the procedures detailed in the respirator protection program. Contaminated rags and PPE (disposable coveralls, gloves, booties, etc.) shall be disposed of at the decontamination station in a lined DOT approved container.

STORAGE OF MERCURY

All mercury shall be stored in a secure area demarcated and regulated with appropriate warning signs.

- Mercury thermostats containers shall be made of plastic displaying the following:

WARNING!

MERCURY

- Mercury light tubes shall be placed in appropriate boxes for storage and transportation.

MERCURY SPILL CLEAN UP

Employees may clean up minor Mercury spills, provided the employees are trained in hazard communication, 40-hour Hazwoper and qualified to select and wear the appropriate PPE (e.g., gloves, respiratory protection). An example of a minor spill would be a small-localized pool of liquid in an easily accessible area.

At a minimum, Mercury (Hg) spill kits shall include: one small Hg hand pump vacuum, Hg absorbent powder and/or absorbent sponges, scoop, Hg recovery bags, latex gloves, and safety glasses.

General Steps to Follow:

- Don appropriate PPE (e.g., gloves, safety glasses, respirator with mercury vapor cartridge (ESI).
- Begin mercury cleanup by vacuuming with Hg hand pump vacuum to remove Mercury droplets.
- Use Hg absorbent powder (HGX) or sponges to amalgamate the mercury residue so the spill won't emit dangerous vapors. Don't forget low-lying cracks and crevasses where Mercury may have pooled.
- Put all contaminated materials in waste recovery bags. (Notify the RHSM that you have hazardous waste).

3.3-ASBESTOS ABATEMENT

Removal of asbestos materials as referenced in scope of work and asbestos survey.

TRAINING / CERTIFICATION

All NCG employees assigned to this project have completed the OSHA 10- or 30-Hour Construction Training; Respiratory Protection; Lead in Construction; Asbestos Training in accordance with 1926.1101, NCG Site Orientation; 40-hour hazwoper, and Hazardous Communication Training. Employees will receive medical examinations and be fit tested in accordance with 29 CFR 1910.134. All training documentation shall be onsite.

PERSONAL PROTECTIVE EQUIPMENT

Asbestos removal; Half face or full-face air-purifying respirators with P100 filters, disposable protective clothing (Tyvek), hard hat, safety shoes, eye protection, hearing protection and A6 and Latex gloves / A7 sleeves.

Asbestos Abatement and related work shall conform to USEPA and OSHA requirements.

Asbestos project notifications shall be submitted to FDEP, county and any other required party having jurisdiction over Asbestos Abatement activities at the site.

Only personnel properly accredited to handle Asbestos containing materials shall be permitted to perform that work.

Access shall be controlled to all Asbestos Abatement work areas. Warning signs shall be placed around the area proximate to Asbestos Abatement, as required by OSHA, and USEPA.

Physical barriers shall be installed, where required.

The competent person will inspect work areas to ensure that all areas are compliant with 1926.1101 at the end of each shift.

3.4-HYDROCARBONS

Several types of hydrocarbons are in use at the site, including Diesel Fuel, Gasoline, and various lubricating oils. Inhalation of vapors from these hydrocarbons can irritate the eyes, nose, throat, and lungs. Excessive short-term exposure can lead to dizziness, drowsiness, loss of coordination, headaches, nausea, and lung damage. Hydrocarbons can be irritating to the skin and dermal exposure to hydrocarbons can aggravate existing skin conditions. A large skin exposure can lead to redness, pain, and chemical burn blisters. Long term exposure to hydrocarbons has been shown to be an increased risk for cancers due to the presence of Benzene and other carcinogens in these materials.

STORAGE

Storage of usable hydrocarbons (oil, lubricants, fuel, etc.) will be in a designated satellite area with signs to ensure proper hazard communication is being maintained**.** All hydrocarbons in small manageable containers shall be stored in a fire cabinet. Any container with hydrocarbons that are in 5-gallon containers or more shall be placed in a secondary containment that will be able to hold more than the total amount of all hydrocarbons placed in said containment.

HANDLING

All Hydrocarbons shall be handled with the appropriate PPE. Employees at no point shall handle any object without proper PPE. Handling of all hydrocarbons requires a minimum of gloves and safety glasses. Furthermore, all hydrocarbons should be utilized in a well-ventilated area. If the area is not well ventilated, NorthStar Contracting Group shall use engineering and mechanical means to create a suitable atmosphere.

SPILL RESPONSE

All storage locations of hydrocarbons or in locations that utilize hydrocarbons shall have an emergency spill response kit in the event of an accidental release. Releases can occur when a container, hose, or piping is damaged in any form causing the release. All releases, big or small shall be reported to the immediate supervisor who shall then report to the site safety representative and site superintendent. During the reporting, employees shall state the nature of release, potential spill quantity, and its potential environmental impact. In the event of an incidental spill, stop work shall be issued to the nearby employees who shall assist in the clean up operation. The spill response shall take priority if an impact on the environment is imminent. All releases shall be reported immediately to the site coordinator.

3.5-DECONSTRUCTION

This project consists of the structural deconstruction of various structures as shown on the contract documents. All work performed will be in accordance with OSHA regulatory requirements.

Upon completion of daily deconstruction activities, the Project Supervisor shall conduct a walk-through of the area to check conditions within the demolished area, ensuring that all areas are compliant with 1926.850 at the end of each shift. This walk through shall include checking areas of hot work; debris removal and tool clean up.

TRAINING / CERTIFICATION

All NCG employees assigned to this project have completed the OSHA 10- or 30-Hour Construction Training; Respiratory Protection; Lead / Silica in Construction; NCG Site Orientation; 40-hour HAZWOPER; and Hazardous Communication Training. Employees will receive medical examinations and be fit tested in accordance with 29 CFR 1910.134.

PERSONAL PROTECTIVE EQUIPMENT

Deconstruction: Half face or full-face air-purifying respirators with P100 filters (when required), hardhat, safety shoes, eye protection, hearing protection and A6 gloves / A7 sleeves.

4.0 – HAZARD EVALUATION

OPERATIONAL HAZARDS

During the planned abatement / deconstruction activities, personnel will be subjected to potential hazards. These hazards will be controlled through the identification, and evaluation of potential hazards, and adhering to administrative controls, engineering controls, personal protective equipment, and safe work practices. Potential hazards anticipated to be encountered during this project include:

- Electrical
- Falls
- Dropped Objects

- Heavy Equipment
- Fire
- Air Contaminates (Asbestos, Carbon Monoxide, Lead, PCBs, and Silica)
- Dust Control
- Material Handling
- Rigging
- Noise
- Heat

ELECTRICAL

Work tasks anticipated during this project may subject personnel to possible electrical shock/burn hazards. Injuries may result due to faulty/damaged equipment, inadequate equipment grounding/bonding, wet environments and unsafe acts committed by personnel using or working near energized electrical equipment. Adhering to the following provisions will mitigate potential hazards associated with electrical equipment.

Prior to the commencement of abatement / deconstruction activities, NCG will verify that all existing electrical power in the work area has been cut and air gapped. All visible hazards such as overhead and concrete encased utilities shall be identified.

NCG will comply with 1926 Subparts K / V and NFPA 70E.

All electrically powered tools and equipment used on this project shall be inspected prior to each use, maintained to be safe, and adequate for the designated use.

All drills, saws, and such shall be double insulated, and UL approved, or provided with a ground prong on the male plug. All temporary 120/125 volt, single-phase, 15 and 20-ampere receptacles and cord sets shall be protected by approved ground fault circuit interrupters (GFCI's). Additionally, all electrically powered hand tools and cord sets must be inspected daily and regularly. This will be documented during the site safety inspection that is conducted by the SSM.

Grounding and bonding techniques are necessary to prevent the build-up of electrical potentials, which upon discharge could become a source of ignition/explosion. Therefore, grounding/bonding shall be utilized during fuel transfer activities from containers into equipment fuel tanks.

Work activities to be conducted on this project may require the implementation of hazardous energy control measures (lockout/tag out). These measures would be utilized to protect against the unexpected release of hazardous energy. Employees conducting LOTO will have current LOTO training following the 8-12 of the NorthStar corporate guidelines.

FALL HAZARDS

NCG's fall protection program requires that if the potential exists for an employee to fall 6' or greater, that employee shall be protected.
In addition to this 6' policy, if an employee is unable to maintain 3 points of contact on a ladder (2 feet, 2 hands), regardless of height, that employee shall maintain 100% tie off.

Throughout the duration of NCG's work, a written **fall hazard assessment (FHA)** shall be developed by the PS, SSM, and RHSM to identify hazards, required protection and procedures. FHAs shall be conducted on a task-to-task basis and shall be reviewed daily with all employees who could potentially be exposed to a fall hazard.

FHAs shall be maintained on site and shall be discussed and reviewed during daily safety briefings as well as discussed during new employee orientation to the site.

At a minimum FHA's, shall be developed for the following conditions:

- Fall hazards greater than 15' shall require that FHAs are submitted to Gary Thibodeaux, NCG's VP, Director of Health & Safety, for approval. Work shall not proceed without approval.

Potential Fall Hazards on the project include, but are not limited to:

- Leading Edges
- Aerial Work Platforms (Scissor-lift, boom-lift)
- Open holes
- Window & wall openings
- Open sided floors
- Scaffolds

NCG's written FHAs shall include the following, as applicable:

- scope of work
- assessment checklist
- assessment information
- potential environmental conditions that may impact safety i.e., wind and inclement weather,
- sketch of elevated work level
- Personal fall arrest (PFA) required i.e., full body harness, beam clamp / sling, retractable, lifelines, etc.
- fall protection inspection and assembly.
- training requirements, employees trained.
- method(s) of providing overhead protection.
- method(s) for retrieval

NCG Corporate policy dictates that when the potential exists for a worker to free fall more than (6) feet, or less if lower obstructions are present, workers must continuously use a fall protection system. Fall Protection Systems include:

Guardrail systems
Personal fall arrest systems
Covers

It is the policy of NCG, even though these procedures may exceed applicable legal requirements that all scaffolding used on NCG projects shall be installed with handrails and mid-rails. No NCG employee shall work on any scaffold greater than 15 feet in height without the use of a full body harness, equipped with a SRL, connected to an appropriate anchorage point.

When a task requires the use of a ladder, alternative means such as the use of scaffolding and lifts shall be considered first. All employees required to work from ladders shall be trained in their proper use, in accordance with OSHA guidelines. Further, no NCG employee shall work from a ladder greater than 6 feet in height without wearing a full body harness equipped with a SRL connected to an appropriate anchorage point. **Ladders will not be utilized for deconstruction.**

It is the responsibility of the fall protection competent person to implement the fall protection plan and to continuously make safety checks of their work operations and to enforce these safety policies and procedures.

It is the responsibility of each employee to inspect their fall protection equipment prior to each use and bring to management's attention any unsafe acts or unsafe conditions that may cause injury to themselves or any other employees.

A Competent Person is an individual who, through training, experience, and certification, can identify existing and predictable fall protection hazards in the workplace and who has authorization to take prompt corrective measures to correct them. The PS shall be a competent person.

A Qualified Person is an individual who possesses a recognized degree, certificate, or has professional standing, or who by extensive knowledge, training and experience has successfully demonstrated his ability to solve or resolve problems relating to fall protection. The RHSM John Ryan shall be the qualified person.

The following represents the several different parts which comprise the portable lifeline system designed to arrest the fall of one person. This system must be used by each NCG employee who is working at an elevated level in which the potential exists for a free fall of more than six (6) feet.

ANCHORAGE POINTS

The critical requirement in all fall protection is the anchorage point. It is the position on an independent structure to which the fall arrest device or lanyard is securely attached. A fixture point above head height should always be planned where this is feasible.

HORIZONTAL LIFELINE

A horizontal lifeline is an anchorage cable designed to be rigged between two fixed anchorage points on the same level which are independent of the work surface. The purpose is to provide a continuous anchorage point for the attachment of lanyards and/or retractable lifelines when no supporting steel or existing structural anchorage points are available. When using a "rat line", as it is more commonly referred to in the industry, care must be taken to ensure the following factors: cable-type lifelines must be at least one-half inch in diameter and be capable of supporting a 5000 pound deadweight load per person at the center of the lifeline; anchorage points must also be capable of supporting 5000 pounds per employee attached; a minimum safety factor of 2:1 is required; the cable must have an adequate degree of sag; supports every 20 to 50 feet; and sufficient shock absorption and design

strength at least twice the force calculated for the dynamic fall of an anticipated number of workers who may use the line. Extremely careful engineering is required for all horizontal lifelines.

NOTE: Horizontal lifelines must be designed and engineered by a Qualified Person.

VERTICAL LIFELINE

A vertical lifeline is a line which extends from an independent anchorage point and to which a lanyard is attached using a grabbing device. This line should be at least 5/8-inch diameter nylon or 5/8-inch diameter or 3/8-inch diameter steel cable and must have a minimum breaking strength of 5000 pounds.

NOTE: When vertical lifelines are used, only one (1) employee may be attached to each line.

BODY HARNESS

A Body Harness, like a parachute-type harness, is the only safety support authorized to be worn by NCG employees with a fall protection system. The body harness shall be a nylon or web belt system designed to spread the shock load of an arrested fall over the shoulders, thighs, and seat area. The D-ring must be positioned on the upper back straps, where it shall also provide a practical means of raising or lowering the wearer in a rescue operation. The use of color-coded harness straps shall help workers to put on the harness easily and properly. NCG corporate policy requires the Body Harness must be used in all applications where a personal fall arrest system is used.

ROPE GRAB DEVICE

This is a grabbing device which connects the worker's safety harness or lanyard to the lifeline and is designed to arrest a fall mechanically, bringing the worker to a full stop. There are two types of mechanical cable or rope grabbing devices which may be used by NCG personnel:

Manually Operated Grab

Workers move this device by hand, up and down the lifeline. Preferably, it should be positioned above the work level. This device actuates during a fall by either squeezing the rope, or it tips in such a way as to lock onto the lifeline by friction.

Mobile Grab

This grab device is designed to travel freely on the lifeline, helping to provide vertical freedom of movement, but locks automatically should a fall occur. Most mobile grabs are activated by the inertial and/or frictional forces generated by a fall.

SELF-RETRACTING LIFELINE DEVICE TYPE 2

Self-retracting lifelines which automatically limit free fall distances to two (2) feet or less must be capable of sustaining a minimum tensile load of 3,000 pounds applied to the device with the lifeline or lanyard in the fully extended position.

These portable, self-contained devices are fixed to an anchorage point above the work area. The webbing or cable is attached directly to the worker's safety harness. The cable pays out of the device as distance increases and retracts as the worker moves closer. Now a fall occurs, a centrifugal locking mechanism is activated to arrest the movement, thereby reducing the potential shock load. A good application can be found on sloping roofs or other areas where the rope is never slack, and it does not interfere with the work surface. Applications of this device include working on a slanting roof or from a JLG bucket.

NOTE: Since this device is an enclosed, self-retracting mechanism, consideration should be given to the fact that requirements for inspection and maintenance shall be much greater and more difficult than with other fall protection systems. **NCG shall be utilizing Type 2 self-retracting lifelines for all work.**

HARDWARE CONNECTORS

These consist of bolts, shackles, D-rings, snap hooks, and metal links which connect parts of the lifeline system. OSHA requires a 5,000-pound minimum ultimate static tensile strength and a minimum tensile load of 3,600 pounds proof testing of each snap hook and D-ring without permanent distortion. NCG corporate policy requires that all snap hooks must be of the new self-locking style device that prevents unintentional disengagement of the snap hook.

NOTE: A major problem with forged safety snap hooks is their susceptibility to "roll-out," or unlatch during shock or static loading by a twisting process. Care must be taken to ensure the use of "as new" safety locking snap hooks or Carabineer type snap hooks with an automatic twist-lock arm. Snap hooks should only be attached to compatible hardware and never to each other.

HEAVY EQUIPMENT

Based on the tasks required for deconstruction, cranes, excavators, skid steers, and remote-controlled demolition machines shall be employed. NCG employees shall follow the NCG H&S Program when working around heavy equipment (summarized below):

- Trained Operators are the only employees permitted to run any piece of equipment.
- All equipment shall be inspected prior to operation.
- All workers will be required to wear reflective clothing when working around equipment.

- Each person approaching active heavy equipment must be sure to make visual eye contact with the operator prior to approaching.
- Employees shall never walk behind the equipment or position themselves in "blind spots" of the operator.
- Employees shall never be under any load.

FIRES/EXPLOSIONS

- Fire protection shall be provided to include 20# ABC type portable fire extinguishers readily available to trained personnel on-site in accordance with OSHA 1926.151.
- Fire extinguishers will be located on each floor and at each stairway entrance.
- Fueling of equipment will be accomplished by scheduled deliveries.
- All fuel tanks will be grounded, and a bonding cable will be used during fueling operations.
- All personnel will be familiar with how to summon for emergency assistance and the Emergency Action Plan Evacuation Areas.
- All flammable materials to be used on-site shall be transported and stored in UL listed approved containers.
- Suitable containers with lids shall be provided for collection of waste materials and trash.
- Combustible materials will be removed at regular intervals to avoid poor housekeeping conditions.
- Flammable and combustible materials will be stored in proper cabinets away from sources of ignition in full compliance with local, federal, and site-specific regulations.
- Fire extinguisher equipment shall be inspected routinely to ensure it is properly charged and provided with a monthly inspection record.

CUTTING OR HEATING OF METALS

These requirements will protect the workplace, environment, safety, and health of personnel involved in specific hot work activities in accordance with 29 CFR 1926 Subpart J and NFPA guidance documents. The PS will be responsible for ensuring that personnel who perform cutting and other hot work are knowledgeable and follow the requirements contained within this program.

- NorthStar hot work permit will be obtained and followed.
- Fire watch shall remain in area for 30 minutes after the hot work has stopped.
- Valve protection caps will be in place and secured in a vertical position.
- A suitable cylinder truck, chain, or other steadying device will be used to keep cylinders from being knocked over while in use or in storage.
- The cylinder valve will be closed when work is finished, when cylinders are empty, and when cylinders are moved.
- Oxygen and fuel gas cylinders will not be stored together when in use. They will be separated by a ½-hour fire rated wall or by 35 feet.
- Cylinders will be kept away from hot work so that sparks, hot slab, or flame cannot reach them. If this is not possible, fire-resistant shields will be provided for the cylinders.
- Cylinders will not be placed where they can become part of an electric current.
- Cylinders containing oxygen or acetylene, or other fuel gas will not be taken into confined spaces.
- Cylinders will not be used as rollers or supports.
- Damaged or defective cylinders will not be used.
- Before a regulator is connected to a cylinder, the cylinder valve will be opened slightly and closed immediately to clear dust or dirt that might otherwise enter the regulator.
- The cylinder valve will be opened slowly to prevent damage to the regulator.
- For quick closing, valves on fuel gas cylinders will not be opened more than 1½ turns.
- Before the regulator is removed, the cylinder valve will be closed, and the gas released from the regulator.
- Fuel gas and oxygen hose will be easily distinguishable from each other.
- All hoses will be inspected by the employee prior to use. Defective hoses will be removed from service and tagged "Defective - Do Not Use.

- Oxygen and fuel gas regulators, including their related gauges, will be in proper working order while in use. Defective items will be removed from service and tagged "Defective - Do Not Use". **Flash Arresters Shall Be Used on Tank Side.**
- Cylinders, caps, valves, couplings, regulators, and hoses will be kept free from oil or greasy substances.
- Do not handle welding or cutting equipment with oily hands or gloves.
- Enough appropriate fire extinguishers will be available. The Hot Work Permit will specify extinguisher requirements.
- Openings in walls, floors, etc., within 35 feet of hot work will be covered to prevent sparks or hot slag from entering them.
- **Completion of NFPA Hot Work Safety Program.**

EXPOSURE TO AIR CONTAMINATES

It is anticipated that asbestos, CO, lead, PCBs, and silica, may be generated during this project. However, the level of identified contaminates are not anticipated to approach OSHA PEL's.

NCG recognizes the need both to protect workers and to implement reasonable and sound methods for performing certain tasks. This plan has been designed to conform to the requirements of the OSHA Standard 29 CFR 1926. NCG will perform personal exposure monitoring to determine accurately the airborne concentrations of known potential hazards.

MONITORING CRITERIA

Determination of employee exposure shall be made from breathing zone air samples that are representative of the eight-hour time weighted average (TWA).

Representative sampling of the employees for full shift exposure shall be conducted for each task.

Initial exposure assessment shall be performed during activities where hazards can be reasonably expected, including but not limited to:

- Work area preparation.
- Deconstruction activities lead / silica.
- Abatement ACM / PCBs.
- Debris handling.

NIOSH METHODS

- Asbestos air monitoring shall be conducted and analyzed utilizing NIOSH 7400 Revision 3, Issue 2.

- Lead air monitoring shall be conducted and analyzed utilizing NIOSH 7300 method.
- PCB air monitoring shall be conducted and analyzed utilizing NIOSH 5503 method.
- Silica air monitoring shall be conducted and analyzed utilizing NIOSH 7500 Method.
- CO will be monitored throughout the shift utilizing BWC2-M continuous monitor.
- A Defender 510 will be used for accurate calibration of air sampling equipment.

MONITORING

The personal air sampling for asbestos, lead, PCBs, and silica will be conducted by NCG safety team and analyzed by licensed laboratories.

EXPOSURE ASSESSMENT

Based on initial air sampling results, monitoring shall continue monthly to further evaluate worker exposure. A minimum of one day of monitoring per month will be performed for each activity identified above in the monitoring criteria section of this plan.

In the unforeseen event that air samples are above the OSHA PEL the operation shall cease and NCG will implement appropriate controls or make modifications to procedures.

Additional exposure monitoring shall be performed, as determined by NCG where:

- A marked change in process, control equipment, personal or work practices that may result in a new or additional exposure above a PEL / Excursion Limit occurs.
- If there is any reason to suspect that a change may result in new or additional exposures above a PEL / Excursion Limit occurs.

Results from all air monitoring will be reviewed with all employees during the daily huddle safety meeting and then posted in the break area.

FUGITIVE DUST CONTROL

This procedure has been prepared to address the control of airborne dust emissions during deconstruction and debris handling operations. The primary objective of this procedure is to formulate a strategy for controlling to the greatest extent practicable airborne dust emissions on the site. This will be accomplished by identifying specific sources and activities that have the highest potential to produce or generate airborne dust emissions. This procedure describes the engineering controls necessary to minimize and control dust emissions from the sources and activities. As necessary the scope of this procedure will be revised to reflect changes in dust control strategy as site conditions or activities may change.

As a precautionary and control measure for this project, this procedure will be used.

- To eliminate the origins of dust from the site.
- To identify potential dust mitigation pathways.
- To monitor for dust produced by site activities.
- To implement corrective actions as the need arises.

POTENTIAL DUST SCOURCES

The primary contaminates of concern with respect to dust emissions at the site is silica. The following project work tasks have been identified as potential sources of dust emissions. At a minimum dust control technique will be employed in:

- Deconstruction of structures.
- The moving and stock piling of concrete and debris.
- The loading of debris.

DUST CONTROL AND MITIGATION PROCEDURES

The following methods will be used to prevent conditions conductive to dust generation:

- Dust Boss's shall be positioned at various locations based on wind direction during deconstruction, debris handling operations.
- Laborers utilizing fire hoses as needed for source control.
- Dust Boss stationed.
- Water misters.
- Adjacent paved areas used for deconstruction operations will be maintained free of dust and debris.

MATERIAL HANDLING

Material handling equipment will be required for the completion of this project. Hazards presented to workers during material handling tasks include shifting, sliding, and falling of stored materials and equipment, or loads. Potential injuries and accidents resulting from these activities will be minimized by adhering to applicable provisions within following requirements:

- Worker hazard awareness will be promoted during daily huddle and task specific safety briefings.
- All stored materials will be stacked, racked, blocked, or interlocked to prevent sliding, falling, or collapse.
- Maximum safe loads will not be exceeded (debris / equipment load capacities).
- Storage areas will be kept in good repair, and aisles and passageways shall be kept clear to provide free and safe movement of personnel and material handling equipment.
- Materials handled/used on scaffolds or other elevated surfaces will be limited to those required for immediate operations.

RIGGING

Before making the lift, determine the weight of the object to be lifted, how far it must be moved, and how it will be lifted. All lifts must be made within the safe working capacity of rigging and equipment verified by rigging competent person.

- Equipment weights should be provided on manufacturer's data plates for equipment, equipment cut sheets, or product manuals.
- Consider the weights of any liquids present inside tanks or equipment to be lifted.

A qualified rigger will decide how to connect the load to the lifting hook and how to attach the sling to the load.

- Whenever possible, plan to connect slings to or through lifting points designed and installed by the equipment manufacturer.
- For load stability, use 2 leg or greater slings or bridles, including a double choker or double basket. Loose materials such as bundles should be lifted using a choker hitch.

Calculate the load on each leg of the sling, based on the weight and size of the load, selected hitch, and the sling load angle factor. Never load slings, shackles, or other rigging equipment more than its safe working limit / rated capacity as determined by the manufacturer and identified on the tag or permanently marked on the equipment.

Ensure the rigging lifting equipment is in good condition and can make the lift. Rigging must be inspected by a qualified person before use, on each shift, and periodically during its use to ensure that it is safe to use.

- All slings must be legibly marked with the name of the manufacturer, rated capacity, and material of construction (type of steel, nylon, polyester, etc.)

- Fittings, hooks, and shackles must be alloy steel (safety factor 5) or carbon steel (safety factor 6). Safe working loads must be legibly marked by the manufacturer on the shackle.

Remove wire rope from service when:

- There are 6 or more randomly distributed broken wires in any one lay, or when there are 3 or more broken wires in any one strand of any one lay.
- There is more than one broken wire at the end connection.
- 1/3 of an individual outside wire's diameter is worn.
- The rope is kinked, crushed, "birdcage", or there is any other damage or distortion of the wire rope.
- There is evidence of heat damage, melting, or slag on the rope.
- The rope's diameter has been reduced due to stretching of the rope:

Original Rope Diameter	Maximum Reduction
Up to 3/4"	3/64"
7/8" to 1-1/8"	1/16"
1-1/4" to 1-1/2"	3/32"

- Chain or wire rope slings may not be kinked, shortened with knots or bolts or other makeshift shortening devices.
- Identification tags from the manufacturer are missing or illegible.

- Remove nylon and synthetic from service if any of the following are present:

a. Melting, charring, burn holes, acid, or caustic damage in any part of the sling surface.

b. Snags, punctures, tears, or cuts.

c. Broken or worn stitches.

d. Warning threads are visible.

e. Distortion of fittings.

- Remove fittings, hooks, or shackles from service if any of the following are present:
  - Broken or missing safety latch.
  - Cracks, nicks, bending, or excessive wear. Deformed hooks or rings must be replaced.

- Hooks that appear to have been spread from point loading or overloading. Remove from service those hooks that have been spread more than 15% of the normal throat opening or twisted more than 10 degrees.
- Hooks that have been welded to or burned in any way.
- Shackle that is bent or deformed, or where the pin is very difficult to turn. In that case, either the pin is bent due to overloading, or the threads have been damaged.
- Identification markings of safe working limits are illegible or missing.

- Protect all slings from damage by placing "softeners" or wooden blocks between sharp edges or corners of the load and the sling. Split rubber hose, nylon softeners or similar materials can be used to protect the sling.
- Set the slings to avoid slippage.
- Face the hook opening out and away from the pull of the sling when making choker hitches. Don't assume the hook is going to stay in place when the slack is taken out of the sling.
- Place the eye of the sling in the base (bowl) of the hook to prevent point loading on the hook. Avoid pulling against the hook safety latch.
- Attach a tag line to the load. Tag lines must be securely attached to the rigging, and long enough for an employee to control the rotation and swing of the load. Do not attach excessively long tag lines as the excess line will create a tripping hazard.

NOISE

Anticipated work activities will routinely involve equipment such as excavators, remote-controlled demolition machines, etc.
NCG has conducted noise exposure monitoring and evaluations on similar projects. The information obtained during these evaluations will be utilized to establish hearing protection requirements for this project. Safeguarding personnel from potential noise exposure will be implemented by the PS in the following manner.

- Personnel subjected to excessive noise shall be trained in the hazards associated with acute and chronic noise exposures.
- Personnel when exposed to excessive noise shall use hearing protection with a noise reduction rating of 29 or greater.
- Whenever possible, removal or reduction of noise hazards will be accomplished through the implementation of administrative and engineering controls.

- NCG has a Hearing Conservation Program to cover audiometric testing, training and other OSHA requirements to protect its employees from noise hazards.

- Hearing protection requirements will be posted as appropriate to communicate to personnel entering areas where hearing protection is needed.

Heat

During a day's work in the heat, a worker may produce as much as 2 to 3 gallons of sweat. Because so many heat disorders involve excessive dehydration of the body, it is essential that water intake during the workday be about equal to the amount of sweat produced. Most workers exposed to hot conditions drink fewer fluids than needed because of an insufficient thirst drive. Where refillable water jugs are used to provide drinking water, they must be cleaned and refilled daily, and the top must be sealed with tape and the date it was filled written on the sealing tape.

Symptoms and Treatment of Heat Stress

Type of Heat Stress	Signs and Symptoms	Treatment
Heat Syncope	Sluggishness or fainting while standing erect or immobile in heat.	Remove to cooler area. Rest lying down. Increase fluid intake. Recovery usually is prompt and complete.
Heat Rash	Profuse tiny raised red blister-like vesicles on affected areas, along with prickling sensations during heat exposure.	Use mild drying lotions and powders, and keep skin clean for drying skin and preventing infection.
Heat Cramps	Painful spasms in muscles used during work (arms, legs, or abdomen); onset during or after work hours.	Remove to cooler area. Rest lying down. Increase fluid intake.
Heat Exhaustion	Fatigue, nausea, headache, giddiness; skin clammy and moist; complexion pale, muddy, or flushed; may faint on standing; rapid pulse and low blood pressure; oral temperature normal or low.	Remove to cooler area. Rest lying down, with head in low position. Administer fluids by mouth. Seek medical attention.
Heat Stroke	Red, hot, dry skin; dizziness; confusion; rapid breathing and pulse; high oral temperature.	Cool rapidly by soaking in cool – but not cold – water. Call ambulance and get medical attention immediately.

Each day the weather forecast should be monitored for both temperature and humidity. The table below list protective measures based on the Heat Index provided in the weather forecast.

Heat Index	Risk Level	Protective Measurers
<91°F	Lower (Caution)	✓ Provide drinking water. ✓ Ensure that adequate medical services are available. ✓ Encourage workers to wear sunscreen. ✓ Acclimatize workers.

		If workers must wear heavy protective clothing, perform strenuous activity or work in the direct sun, additional precautions are recommended to protect
91°F to 103°F	**Moderate**	In addition to the steps listed above: ✓ Remind workers to drink water often (about 4 cups/hour) ✓ Review heat-related illness topics with workers. ✓ Schedule frequent breaks in cool, shaded area ✓ Acclimatize workers. ✓ Set up buddy system/instruct supervisors to watch workers for signs of heat-related illness. **If workers must wear heavy protective clothing, perform strenuous activity or work in the direct sun, additional precautions are recommended to protect workers from heat-related illness.** **Schedule activities at a time when the heat index is lower** ✓ Develop work/rest schedules. ✓ Monitor workers closely
103°F to 115°F	**High**	In addition to the steps listed above: ✓ Alert workers of high-risk conditions ✓ Actively encourage workers to drink plenty of water (about 4 cups/hour) ** ✓ Limit physical exertion (e.g., use mechanical lifts) ✓ Have a knowledgeable person at the worksite who is well-informed about heat-related illness and able to determine appropriate work/rest schedules. ✓ Establish and enforce work/rest schedules. ✓ Adjust work activities (e.g., reschedule work, pace/rotate jobs) ✓ Use cooling techniques. ✓ Always Watch/communicate with workers. **When possible, reschedule activities to a time when heat index is lower.**
>115°F	**Very High to Extreme**	**Reschedule non-essential activity for days with a reduced heat index or to a time when the heat index is lower.** **Move essential work tasks to the coolest part of the work shift; consider earlier start times, split shifts, or evening and night shifts. Strenuous work tasks and those requiring the use of heavy or non-breathable clothing or impermeable chemical protective clothing should not be conducted when the heat index is at or above 115°F.**

SECTION 5 – SITE CONTROL AND SAFETY PROCEDURES

The elements of site control include restricting access to the site to persons trained in safety procedures, the "buddy system", site communication, and site security. Only personnel who understand this SSHASP and the potential on-site hazards will be allowed on-site.

Site control will be maintained by the PS. Work areas will be identified by temporary barricades, barricade tape, and postings.

The Project Supervisor/ and foremen will clearly layout and identify work areas in the field and will limit equipment, operations, and personnel in the areas defined above prior to initiation of site activities.

STOP WORK AUTHORITY

All employees on site have the authority and responsibility to stop work for conditions that pose imminent hazard or danger. Imminent hazards are those hazards or situations, if allowed to persist, is likely to cause an accident that will result in death, serious injury, significant property damage, or environmental impairment. NorthStar considers no activity to be so urgent or important that its standards for environmental protection, safety, or health may be compromised. Employees have the right and responsibility not to perform tasks or activities they feel pose undue risk to themselves, co-workers, or the environment.

SAFETY INTERVENTIONS

NorthStar empowers its employees to intervene whenever they see someone exhibiting unsafe behavior or working in unsafe conditions. When such a situation is observed, an intervention is conducted by discussing with the person how the task could be performed safely. Unsafe conditions will be corrected immediately, and any condition requiring the purchase of new tools and equipment will require a temporary task stand-down until the correct equipment is available. Unsafe behaviors may be corrected through coaching or re-training. As needed, the observer can involve the Supervisor or safety officer to resolve the issue.

WORK ZONES

The purposes of the regulated zones are to maintain order in the work area and to minimize physical hazards to on-site personnel, visitors, and the public. NCG will establish the active work zone via barricades, tape, and/or other means.

DAILY HUDDLE

At the start of each workday, a daily huddle will be held with all NCG personnel and any other third-party contractors working at the site. The work for the day will be outlined with applicable safety considerations. In addition, a safety topic will be discussed e.g., location of safety equipment, proper decontamination, emergency procedures, electrical hazards, etc.

In addition to daily huddle, NCG shall conduct a weekly Tool Box Talks that pertain to the scope of work for the upcoming week.

PERSONAL PROTECTION

The level of PPE assigned to deconstruction activity is based on available information on the estimation of exposure potential associated with the work task.

The PS will be responsible for enforcing the appropriate use of personal protective equipment (PPE) for all personnel during work, through a program of regular site surveillance and progressive disciplinary policy. Task-specific PPE will be used in accordance with Section 3 of this Plan.

This section provides employees with guidelines for personal protection from potentially harmful substances, physical hazards, or hazardous processes. As a minimum, OSHA 29 CFR 1926 Subpart C will be followed for personal protective equipment guidance. Personal protective equipment will be maintained and used in a safe manner and inspected at the time of issuance and prior to use for verification of acceptable conditions. In addition, the following requirements will apply:

EYE AND FACE PROTECTION

The use of approved protective eye equipment and face protection equipment will always be required. Protectors will meet the following minimum requirements:
American National Standards Institute (ANSI).
Meet requirements established in ANSI Z87.1-2015 (including prescription eyeglasses).

- Employees whose vision requires the use of corrective lenses in spectacles will be protected with goggles, spectacles, face shield or other eye protection meeting the same requirements.
- Eye protection will always be worn.
- A face shield will be worn in addition to safety glasses during grinding, chipping, and other operations producing flying objects.

HEAD PROTECTION

- The use of approved hard hats [Type 2 with chin strap] will be required for protection workers from falling and flying objects. Hard hats will meet the requirements established in American National Standards Institute (ANSI).
- Hard hats will be worn in such a manner that the hat brim is always positioned in front, except when fitted with a welding hood attachment.
- Helmets for the head protection of employees who risk exposure to high voltage electrical shock and burns will meet specifications contained in ANSI Z89.1-2014.

- Hard hats will always be worn in a posted deconstruction area and/or when instructed by supervisory or safety personnel.

- Hard hats do not have to be worn in restrooms, lunchrooms, heavy equipment or trucks, or when vision may be impaired for crane operators during a lift (but only if there are no hazards present to the operator).

FOOT PROTECTION

ASTM F2412 revision 18A Protective Footwear, approved safety-toe and/or chemical resistant footwear will be worn when work operations present hazardous such as falling objects, pinch points, or material handling which may result in injury to the foot. Otherwise, deconstruction workers and persons in the deconstruction area must wear protected toed leather working boots, in good repair. Under no conditions will running shoes, tennis shoes, or sandals be worn.

HEARING PROTECTION

Hearing protective devices will be provided and worn whenever noise levels are equal to or greater than 85 decibels (DBA).

- Hearing protection requirements will be determined by the BHSO and by posting signs and flagging at the work location.

- Foam-type earplugs will be used only for one shift or until they become soiled, whichever comes first. (NRR 29 or greater)

BODY PROTECTION

Appropriate protective clothing and boots will be worn when working in operations that present chemical hazards, environmental hazards, or physical hazards such as hot surfaces, sharp edges, or abrasive materials. A6 sleeves / A7 gloves shall be always used.

- A6 gloves / A7 sleeves will be worn for protection from lacerations.
- Control of personal protective equipment:
- Disposable PPE will be containerized as required.
- Re-usable PPE will be properly stored.

PPE TABLE

Hand & Arm Protection

Task	Protection
Heavy asbestos / demolition operations such as concrete, duct work, wire mesh, etc. Good puncture protection.	
General asbestos / demolition operations. Cut protection only.	
Asbestos removal where mastics are being removed. No cut or puncture protection.	
All asbestos and demolition operations with laceration hazards.	

Eye Protection

TASK	PROTECTION
All operations.	
Chipping, cutting, power washing, overhead and grinding operations. Safety glasses required under shield.	
Concrete chipping / removal operations. Safety glasses required under shield.	
Optional for all operations.	
Torch Cutting. Safety glasses required under shield.	

RESPIRATORY PROTECTION

PURPOSE

This program establishes uniform guidelines for complying with the requirements of the Occupational Safety and Health Administration's Respiratory Protection Standard, 29 CFR 1910.134 for the proper selection, use and care of respiratory protection equipment.

NCG employees and subcontractors shall wear NIOSH approved respirators when required.

SCOPE

This section applies to all NCG operations.

POLICY

Every consideration will be given to the use of effective engineering controls to eliminate or reduce exposure to respiratory hazards to the point where respirators are not required; however, when feasible engineering controls are not effective in controlling toxic substances, appropriate respiratory protective equipment and necessary medical examinations will be provided by the company at no charge to the employee.
These respiratory protective devices will be of the type approved by the National Institute for Occupational Safety and Health (NIOSH) or acceptable to the U.S. Department of Labor (OSHA) for the specific contaminant to which the employee is exposed.

Where respirators are required by a specific OSHA Standard, NCG shall select and provide, at no cost to the employee, the appropriate respirator and required medical examinations specified by the Standard.

Employees required to use respiratory protective devices will do so as a condition of employment. Employees who are required to use respirators will be properly fitted, appropriately tested, medically screened, and trained in their use.

CODES AND REGULATIONS

General applicability of Codes and Regulations to the extent that more explicit or more stringent requirements are written directly into this procedure, all applicable state and/or local codes and regulations have the same force and effect as if copied directly into this standard. A copy of these codes and regulations must be present at the jobsite.

Federal Regulations: Those standards governing the development of this program include but are not limited to the following:

- OSHA's Lead Standard 1926.62.
- OSHA's Asbestos Standard 1926.1101.
- OSHA's Respiratory Protection Standard 1910.134.

- OSHA's Silica Standard 1926.1153.
- OSHA Personal Protective Equipment Standard 1910.132.
- OSHA Hazard Communication Standard 1926.59.
- OSHA's Access to Employee Exposure and Medical Records Standard
- NIOSH Approvals for Respirators
- American National Standards Institute (ANSI) Z88.2

DESIGNATION OF A SITE-SPECIFIC PROGRAM ADMINISTRATOR

A site-specific Respirator Program Administrator must be designated by name at each jobsite. This will be an individual who is qualified by appropriate training and/or experience (that is commensurate with the complexity of the program) to administer the respiratory protection program and conduct the required evaluations of the program's effectiveness. The site-specific respirator program administrator will be Robert Najera.

To comply with OSHA's "competent person" requirements, the individual designated must have at least two qualifications. He or she must have a good working knowledge of the respiratory protective equipment being used at the worksite and must have sufficient authority to promptly prevent and correct hazardous conditions at the site.

Posting

The name of the designated site-specific Respirator Program Administrator must be displayed in a prominent location at the jobsite.

Respiratory Protection Program

The site-specific Program Administrator will ensure the implementation of a written respiratory protection program with required worksite-specific procedures and elements for required respiratory use.

At any jobsite where the use respirators are necessary to protect the health of our workers, at a minimum, the following elements:

- Procedures for selecting the respirators.
- Medical evaluations of employees required to use respirators.
- Fit-Testing procedures for tight-fitting respirators.
- Procedures for proper use of respirators
- Procedures for inspecting and care of the respirators.
- Training employees about respiratory hazards

- Training employees on the use and limitations of respirators
- Procedures for evaluating the Program.

Program Evaluation

The site-specific Program Administrator will periodically assess the effectiveness of the respiratory protection program during all phases of operation in which respirators are being used. Frequent walk-through inspections during these activities will be conducted to monitor and document supervisor and worker compliance with the requirements of the program. In addition, this evaluation will include regularly consulting with employees who wear respirators concerning fit, comfort, and other factors. The general assessment of the overall Respiratory Protection Program will also include specific evaluations of respirator cleaning, inspection, maintenance, repair, storage, and use procedures to ensure that the desired results of these operations are consistently achieved.

Regional Program Administrator: John Ryan

The use of respiratory protection equipment on this project will be in accordance with 29 CFR 1910.134, "Respiratory Protection", and ANSI Z88.2, Corporate Safety Manual Section 7-1 Respiratory Protection Program, Respiratory-protection equipment along with feasible engineering practices will be used to maintain levels as low as reasonably achievable.

SHIRTS AND PANTS

Shirts with a minimum of 4” sleeves and full-length pants will be always worn.

HOUSEKEEPING

All areas around the site shall be kept in a neat and orderly condition. NCG shall provide a waste container for domestic waste. Good housekeeping is conducive toward a safe work environment.

No eating, drinking or other practices that can increase the probability of hand-to-mouth transfer and ingestion of contaminated or hazardous material will be allowed inside the defined work area. Eating and drinking is permissible only in designated areas. Smoking will Not Be Allowed inside the site and will strictly be enforced. NCG allows smoking only in designated Smoking locations at the site.

DISCIPLINARY POLICY

All NCG personnel and lower-tier subcontractor employees shall be subject to the following progressive disciplinary policy:

1. First Offense: Documented Verbal Warning or Suspension
2. Second Offense: Suspension of 3-5 days.
3. Third Offense: Termination.

DOCUMENTATION

The following documentation will be adhered to during all field activities:

Accident/Incident Report - An Accident/Incident Report Form must be completed by the PS or SSM when any one or more of the following occur because of an accident or incident; fatality, near misses disabling injury, occupational illness, and property damage, fire/explosion, chemical exposure or hazardous material spill or any OSHA reportable events.

Site Safety Training – All training documentation will be maintained on-site.

Safety Log - A Safety Log containing the following information will be maintained: Safety Meetings-attendance and topics.

In addition, all SDS's and the NCG SSHASP will be maintained on-site.

SAFETY EQUIPMENT

Basic emergency and first aid equipment will be available and staged throughout the work area as needed.

Basic site safety equipment shall include communications equipment, fully stocked first aid kit, Emergency eyewash, fire extinguisher, and other related safety equipment.

Emergency procedures, phone numbers, addresses and evacuation routes will be conspicuously posted in highly visible areas. All employed personnel will be familiar with the location of written Emergency Procedures, Emergency Phone Numbers and evacuation routes and general assembly area in case of evacuation.

COMMUNICATIONS

Employees will be notified of emergencies by the project supervisor/lead persons. Job site radios will be used to aid in the communication process with NCG employees. After initial notification, employees will be directed to meet at the pre-designated safety zone. See attached Emergency Action Plan.

VISITORS/SUBCONTRACTORS

All visitors entering the project will be required to comply with the provisions of this plan. Any visitor will be expected to comply with relevant requirements such as training, and respiratory protection (if applicable). Visitors will also be expected to sign in with the site Supervisor and provide their own personal protective equipment.

If a visitor does not adhere to the provisions of the SSHASP, he/she will be requested to leave the project site. All non – conformance incidents will be recorded in the site log.

SAFETY AUDITS

The RHSM will conduct safety audits quarterly of field operations and subcontractor performance to review compliance with health and safety policies and procedures.

SECTION 6 – MEDICAL MONITORING

MEDICAL SURVEILLANCE

All NCG personnel will be required to have passed a pre-assignment and/or periodic medical examination that is consistent with 29 CFR Part 1926.62./ 1926.1101,1910.134. A release for work will be confirmed by the RHSM before an employee can be assigned to site activities. No other medical monitoring will be performed. Additional medical testing may be required in consultation with the company physician if an overt exposure or accident occurs, or if other site conditions warrant further medical surveillance, such as the use of respirators.

SECTION 7 – EMERGENCY RESPONSE PLAN

PURPOSE:

To establish response actions that are to be put into effect at all NCG projects to minimize the losses/injuries to personnel, equipment, and facilities when any type of emergency occurs. The whole spectrum of emergencies including fire, explosion, weather, and toxic atmosphere are covered.

GENERAL:

NCG Project Managers/Supervisors will use these procedures to help the workforce prepare for any emergency. Supervisory personnel should also use their own background experience and job knowledge to supplement these procedures. The basic guide for the procedures given below is in accordance with the OSHA 3088 publication. The scope includes emergency evacuation; specific instructions for those who stay at the jobsite to assure proper shut-down; personnel accounting after evacuation; rescue and medical duties; fire/emergency reporting; and posting a key personnel contact list. These procedures do not cover prevention measures, which are given in other NCG Standard Operating Procedures (SOP's).

PROCEDURES:

Prior to the start of the project, the Project Manager/Supervisor will brief all personnel on these procedures. Special Instructions specific to the current project will be entered at the end of these procedures. A copy of these procedures will be posted at the monitor's desk.

> **Monitor Duties**: Supervisors should always have someone on duty to serve as a monitor and be ready to alert and render aid in case of fires, injuries, heat stress and other emergencies. The monitor will also be responsible for making sure all personnel have evacuated the work area when the evacuation order has been given.

Emergency Notification: Supervisors must validate all key telephone numbers and enter them on the form attached. This emergency notification form will be posted near a telephone at the worksite. Personnel must make sure that they know the exact address of the worksite and be able to aid responding to emergency agencies with location and any other special information.

Emergency Evacuation: The supervisory personnel will plan an emergency route of escape. A diagram of the evacuation route will be drawn and posted in the work area or visible to the work area. The evacuation route will be marked on the floor with duct tape or spray paint. The signal for emergency evacuation will be a long blast on the compressed air horn.

Supervisors will make sure that all personnel have evacuated the area by counting the personnel and double-checking with each lead man.

Emergency Shutdown: Supervisory personnel will locate all utility and equipment controls and appoint knowledgeable personnel to be responsible for shutdown when required for such emergencies as fires, explosions, toxic atmosphere etc.

Fire Responses: In case of fire, the fire hazard becomes more immediate than the asbestos or lead hazard and workers may need to violate the plastic barriers. This should be covered with workers in the emergency action plan for the job site. Personnel must be alert for flammable vapors (solvents such as naphtha, toluene, xylol, etc.). This is especially critical in industrial vacuuming operations where vacuum motors are not explosion proof. Compressed air vacuums may be required. Fire extinguishers emergency response to small fires and will be conspicuously placed and marked for rapid access. All personnel will be briefed on how to operate the extinguishers. Supervisors will ensure that the appropriate types of extinguishers are on hand and that the extinguishers are serviceable. Personnel are to proceed to the nearest emergency exit, remove protective suits if time permits and tear or cut the plastic barrier and exit. Supervisors will make sure first aid is rendered if needed, and that all personnel have evacuated the area.

Toxic Atmosphere: At any time, there is accidental spill or release of a toxic chemical the supervisory personnel will notify the Fire Department and initiate an emergency evacuation of personnel including the emergency removal of injured personnel. If possible, all air movement equipment will be shut down. If time permits all equipment will be shut down. Abatement personnel will wear respiratory Protective Devices during the emergency egress as the device may afford some protection against the toxic atmosphere. Remember, air-purifying respirators (APR's) do not supply oxygen. Supervisory personnel will stand by to assist the fire department as required. Assistance in emergency spills/releases can be obtained by contacting CHEMTREC at 1-800-424-9300. Chemical decontamination will be under the direction of the Fire Chief. Further information on chemical incidents is given in the NCG Hazard Communication Program publication and in the SDS's.

Explosion: In case there is an explosion at the worksite, NCG personnel will ensure that the procedures for fire and medical services notifications are made, and emergency evacuation actions are taken. If possible, all equipment will be shut down and all utilities including electricity, gas and water will be turned off. Supervisors will give aid to the Fire Department as required for the safe evacuation of personnel including the injured. First aid will be rendered as needed.

SILICA EXPOSURE CONTROL PLAN

Required by

The OSHA Silica Standard
29 CFR 1926.1153

1/20/2025

SILICA EXPOSURE CONROL PLAN

GENERAL

It is the policy of NORTHSTAR to take precautions to eliminate potential hazards in the workplace. The purpose of this Silica Exposure Control Plan is to provide the hazards associated with silica dust and outline the steps to take to ensure employees who work with, or around silica are not exposed to hazardous levels of silica dust; and to provide procedures for common silica related work duties to minimize exposure in accordance with the OSHA Standard 29 CFR 1926.1153.

This Silica Exposure Control Plan applies to NORTHSTAR employees who are expected to be exposed to silica dust during demolition operations.

Permissible Exposure Limit: **(PEL) 50µg/m^3, averaged over an 8-hour workday, as a TWA.**

Action Level: **(AL) 25µg/m^3, averaged over an 8-hour workday, as a TWA.**

DESCRIPTION OF ACTIVITIES

Scope Of Work: NorthStar's scope of work shall be the removal of environmental hazards, including Asbestos, Lead and PCBs and the complete deconstruction associated with the Former Baptist Complex.

Crew Size: Crew size will be held to the minimum number of workers as possible to reduce the potential for silica exposure. Prior to the start of demolition all employees will have completed the training required by 1926.1153. All training certifications and medical / fit tests will be available on-site.

MEANS TO ACHIEVE COMPLIANCE:

Respiratory Protection Program: This project will conform to all requirements for respiratory protection (1910.134). Refer to Section 7-1 of the Corporate Safety Manual for a copy of NORTHSTAR's complete Respiratory Protection Program.

Hazard Communication Program: This project will conform to all requirements for Hazard Communication. Refer to Section 7-2 of the Corporate Safety Manual for a copy of NORTHSTAR's complete Hazard Communication Program.

Hearing Conservation Program: This project will conform to all requirements for Hearing Conservation. Refer to Section 7-3 of the Corporate Safety Manual for a copy of NORTHSTAR's complete Hearing Conservation program.

Personal Protective Equipment: We will provide the following protective equipment for the safety of our workers: Refer to Section 8-14, Personal Protective Equipment, in the NORTHSTAR Corporate Safety Manual.

Coveralls (as needed)	**Full or half-face respirators**
A6 Gloves/ A7 Sleeves	**Fall Protection Equipment**
Hard Hat	**Hearing Protection**
Face Shields / Safety Glasses	

Task Specific Engineering Options: The following are specific tasks, which may be used on this project. It describes the activity, notes the engineering control methods which may be used to reduce airborne exposure to silica, and prescribes the type of respiratory protection required.

Task	**Engineering / Work Practice Controls**	**Required Respiratory Protection and Minimum Assigned Protection Factor (APF)**
		≤ 4 hours/shift >4 hours/shift
Jackhammers and handheld powered chipping tools	Use tool with water delivery system that supplies a continuous stream or spray of water at the point of impact: When used outdoors	**None APF 10**

	When used indoors or in an enclosed area	**APF 10**	**APF 10**
	OR		
	Use tool equipped with commercially available shroud and dust collection system Operate and maintain tool in accordance with manufacturer's instructions to minimize dust emissions Dust collector must provide the air flow recommended by the tool manufacturer, or greater, and have a filter with 99% or greater efficiency and a filter-cleaning mechanism:		
	When used outdoors	**None**	**APF 10**
	When used indoors or in an enclosed area	**APF 10**	**APF 10**
Heavy equipment and utility vehicles used to abrade or fracture silica-containing materials (*e.g.*, hoe-ramming, rock ripping) or used during deconstruction activities involving silica-containing materials	Operate equipment from within an enclosed cab	**None**	**None**
	When employees outside of the cab are engaged in the task, apply water and/or dust suppressants as necessary to minimize dust emissions	**None**	**None**
Task	**Engineering / Work Practice Controls**	**Required Respiratory Protection and Minimum Assigned Protection Factor (APF)**	

		≤ 4 hours/shift	>4 hours/shift
Handheld power saws (any blade diameter)	Use saw equipped with integrated water delivery system that continuously feeds water to the blade Operate and maintain tool in accordance with manufacturer's instructions to minimize dust emissions:		
	-When used outdoors	**None**	**APF 10**
	-When used indoors or in an enclosed area	**APF 10**	**APF 10**

TECHNOLOGY USED TO REDUCE EXPOSURE:

While we will use several types of engineering controls to reduce our employees' exposure to airborne silica, the most routinely used controls will consist of regulating the area, the use of water, strict adherence to hygiene requirements, and finally, respirators with an appropriate protection factor.

Regulated Area: In any work area where exposure to silica either exceeds or has the potential to exceed the AL, that area will be regulated to ensure that only authorized personnel will be allowed entry to the work area. The following warning signs will be posted:

Water Methods: Water will be applied at flow rates sufficient to minimize airborne silica dust during all demolition, clean-up, and loadout operations.

Hygiene Facilities: Each worksite will have sufficient hygiene facilities to accommodate workers washing their face and hands before eating or drinking. No smoking in the work area will be allowed.

Respiratory Protection: When all existing engineering controls have been initiated to reduce the worker's exposure to airborne silica, we will then rely on the protection offered by an appropriate respirator. Whenever respirators are used, NORTHSTAR's Respirator Protection Program, as outlined in Section 7-1 of the Corporate Safety Manual, will be in effect.

Respirator	Protection
Half-face with HEPA filters	50 – 500 µg/m^3
Full-face with HEPA filters	500 – 2,500 µg/m^3

AIR MONITORING:

Air Monitoring: Air monitoring will be carried out to ensure the protection of our workers. NORTHSTAR will utilize our supervisors or site health and safety manager to perform sufficient air sampling to accurately determine the airborne concentrations of silica to which our workers may be exposed.

Air Monitoring Reports: The NORTHSTAR Daily Air Monitoring Report form, which contains both the analytical data and the descriptive information, must be used by everyone engaged in the collection of air samples for personal air monitoring. This form must be used to both record the collection information and to report the results of its air sampling analysis.

Notification to Employees: A copy of each completed Air Monitoring Report will be posted for worker notification. Additionally, whenever the results indicate that employee exposure, without regard to respirators, is at or above the PEL, we will include a written statement to each employee exposed to this level, that the employee's exposure was at or above the PEL and a description of the corrective action already taken or to be taken to reduce exposure to below the PEL.

WORK PRACTICE PROGRAM:

Work Practice Controls: When dealing with silica hazards, our first line of defense is engineering and work practice controls. These controls must be utilized to reduce jobsite silica exposure before using any respiratory protection. Work practice control is the modification of a process or equipment to reduce or eliminate silica exposure, and while there are many types of work practice controls, they generally fall into two categories: process/equipment modification and isolation.

Process/equipment modification: This will involve changing a process or equipment to reduce or eliminate the hazard. One example of this would be the equipment operator in an enclosed cab.

Isolation: This is a method of limiting silica exposure to only those employees directly working with it. It may be as simple as regulating the area by posting signs and erecting barricades to keep non-essential personnel away from potential exposure areas.

Housekeeping Techniques: All surfaces will be kept as clean as possible.

Hygiene Facilities and Practices: We will make certain that in areas where employees are exposed to silica, without regard to the use of respirators, they will wash their hands and face prior to eating, drinking, smoking, or applying cosmetics.

Eating Facilities: Eating facilities or areas will be provided that are as free as practicable from silica and are readily accessible to the workers.

Hand Washing Facilities: We will provide adequate hand washing facilities and provide assurance that each employee washes his or her face and hands at the end of each work shift.

MULTI-EMPLOYER WORKSITES:

Multi-Employer Notification: On multi-employer worksites, where operations require the establishment of a regulated work area, there is a responsibility to inform other employers on the site of the nature of NORTHSTAR's work, the existence of the regulated area, and the requirements pertaining to this area. Client shall notify the other employees whom they deem necessary and who are in the immediate vicinity of the regulated area.

Hazard Communication Training: The owner will be given a copy NORTHSTAR's Hazard Communication Program.

MEDICAL MONITORING:

Medical Monitoring Program: Medical monitoring of all personnel will follow 1910.134 and 1926.1153.

DOCUMENTATION/REPORTS:

Documentation: This plan will be submitted upon request to any affected employee or authorized employee representatives, to the Assistant Secretary and the Director, and shall be available at the worksite for examination and copying by the Assistant Secretary and the Director. This program will be revised or updated at least annually to reflect the status of the program.

Site Inspections: The site safety manager will conduct physical inspections of the work area at least daily to ensure that all the corrective measures necessary to decrease the risk potential for silica exposure are properly implemented, correctly maintained and appropriately effective. Oversight to ensure that the deficiencies noted during these inspections are corrected in a timely and consistent fashion will be the responsibility of the PM and/or the RHSM. Comprehensive notes of these inspections must be recorded in a separate file or log and any deficiencies noted must be immediately corrected and reported to the project manager and the Regional Safety Manager.

ATTACHMENT C

LEAD COMPLIANCE PROGRAM

Required by

The OSHA Lead Standard, 29 CFR 1926.62

1/20/2025

COMPLIANCE PROGRAM

GENERAL

NorthStar Contracting Group, Inc. (NS) recognizes the existence of sensitive receptors in proximity to the demolition operations.

NS has established this plan to clearly define practices which will be employed and enforced during abatement / deconstruction tasks to assure a healthy /safe work environment for site personnel. This program is based on the requirements of 29 CFR 1926.62.

This Compliance Program, including attachments used on this project, must be retained for a period of 30 years following the last date of activity on the project.

Competent Person: Robert Najera

A. DESCRIPTION OF ACTIVITIES

A-1 Scope: NorthStar's scope of work shall be the abatement and deconstruction of structures at the Former Baptist Complex.

A-2 Equipment to Be Used: We will provide either new or used equipment that is undamaged and in a serviceable condition, and only equipment that is recognized as being suitable for intended use and in compliance with the appropriate standards.

Lighting	**Extension Cords**
Water Service Connections	**Man-Lifts**
Assorted Hand Tools	**Water Misters**
Cutting Torches and Regulators	**Abrasive / Demo Saw**
Fire Extinguishers	**Hand Wash Station**

A-3 Personal Protective Equipment: We will provide the following protective equipment for the safety of our workers: Refer to Section 8-14, Personal Protective Equipment, in the NORTHSTAR Corporate Safety Manual.

Coveralls	**Full or half-face respirators**
A6 Gloves/ A7 Sleeves	**Fall Protection Equipment**
Hard Hat	**Burning Jackets**
Face Shields / Safety Glasses	**Hearing Protection**
Hearing Protection	**Rubber Boots**

A-4 Material Involved: The following material will be delivered to the worksite in the quantities required for the size of the project:

Hand Soap	**Towels**
Rags	**Warning Signs**
Oxygen/Acetylene/Propane	**P100 / OV Filters**

A-5 Crew Size: Crew size will be held to the minimum number of workers as possible to reduce the potential for lead exposure. Prior to the start of demolition all employees will have completed the training required by 1926.62. All training certifications and medical / fit tests will be available on-site.

A-6 Job Responsibilities: To be determined by Competent Person after analyzing scope of work.

A-7 Operating Procedures: Refer to Section B-4 of this program.

B. MEANS TO ACHIEVE COMPLIANCE:

B-1 Respiratory Protection Program: This project will conform to all requirements for respiratory protection. Refer to Section 7-1 of the Corporate Safety Manual for a copy of NORTHSTAR's complete Respiratory Protection Program.

B-2 Hazard Communication Program: This project will conform to all requirements for Hazard Communication. Refer to Section 7-2 of the Corporate Safety Manual for a copy of NORTHSTAR's complete Hazard Communication Program.

B-3 Hearing Conservation Program: This project will conform to all requirements for Hearing Conservation. Refer to Section 7-3 of the Corporate Safety Manual for a copy of NORTHSTAR's complete Hearing Conservation program.

B-4 Task Specific Engineering Options: The following are specific tasks which may be used on this project. It describes the activity, notes the engineering control methods which may be used to reduce airborne exposure to lead, and prescribes the type of respiratory protection required:

Task

- **Cutting:** Cutting is the process by which metal pieces are severed apart, usually performed with an oxy-acetylene torch. This operation is typically seen in demolition operations. Health hazards created by this process are from lead-based paint on the structure becoming superheated and released into the air in the form of fumes, which can create concentrations of lead dust as high as 50 µg/m3. Exposure level used to specify controls is 50 µg/m3.

  Respiratory protection is required: North 7700 Series half-face respirators or North 5400 Series full-face Respirator with P100/OV filters.

  Engineering Controls:

  1. The use of 4' or 6' torches
  2. Torch cutter will be placed upwind of the cutting operation.
  3. Regulate the area (torch cutting area demarcated by signage / barriers)
  4. Dust Boss

- **Task: Associated Miscellaneous Demolition Activities:** The workers involved with these tasks support in various ways the jobs that produce the primary lead exposures. These tasks include support activities for burning, cutting and support activities for demolition operations. Although the health hazards encountered from these operations include lead exposures from fumes, dusts, and other particulate, which can create concentrations of lead dust as high as 50 µg/m3, in general, the level of protection offered these support workers should be equivalent to the protection used by those individuals either directly or indirectly involved in the job being done.

  Interim respiratory protection is required: North 7700 Series half-face respirators or North 5400 Series full-face Respirator with P100/OV filters.

  Engineering Controls:
  The engineering controls used will vary depending upon the support activities being done. Refer to the demolition plan and AHA to determine the engineering control options.

C. TECHNOLOGY USED IN MEETING PEL:

While we will use several types of engineering controls to reduce our employees' exposure to airborne lead contaminants, the most routinely used controls will consist of regulating the area, the use of an enclosure under negative pressure (if required), the use of amended water, strict adherence to decontamination and hygiene requirements, and finally, respirators with an appropriate protection factor.

C-1 Regulated Area: In any work area where exposure to lead either exceeds or has the potential to exceed the PEL, that area will be regulated to ensure that only authorized personnel will be allowed entry to the work area. The following warning signs will be posted:

C-3 Water Mist: Water mist will be used to hold down airborne lead dust. This will be used in wet scraping as well as in misting the area during removal and clean-up operations.

C-4 Respiratory Protection: When all existing engineering controls have been initiated to reduce the workers' exposure to airborne lead contaminants, we will then rely on the protection offered by an appropriate respirator. Whenever respirators are used, NORTHSTAR's Respirator Protection Program, as outlined in Section 7-1 of the Corporate Safety Manual, will be in effect.

D. AIR MONITORING:

D-1 Air Monitoring: Air monitoring will be carried out to ensure the protection of our workers. NORTHSTAR will utilize our supervisors or site health and safety manager to perform sufficient air sampling to accurately determine the airborne concentrations of lead dust to which our workers may be exposed. Refer to Section 9-2, Air Monitoring Guidelines, in the Corporate Safety Manual.

D-2 Air Monitoring Reports: The NORTHSTAR Daily Air Monitoring Report form, which contains both the analytical data and the descriptive information, must be used by everyone engaged in the collection of air samples for personal air monitoring. This form must be used to both record the collection information and to report the results of its air sampling analysis.

D-3 Notification to Employees: A copy of each completed Air Monitoring Report will be posted for worker notification. Additionally, whenever the results indicate that employee exposure, without regard to respirators, is at or above the PEL, we will include a written statement to each employee exposed to this level, that the employee's exposure was at or above the PEL and a description of the corrective action already taken or to be taken to reduce exposure to below the PEL.

E. WORK PRACTICE PROGRAM:

E-1 Work Practice Controls: When dealing with lead hazards, our first line of defense is engineering and work practice controls. These controls must be utilized to reduce jobsite lead exposure before using any respiratory protection. A work practice control is the modification of a process or equipment to reduce or eliminate lead exposure, and while there are many types of work practice controls, they generally fall into four categories: encapsulation, substitution, process/equipment modification and isolation.

Encapsulation: This will be accomplished by covering the painted surface with a non-lead containing material to isolate the potential lead source.

Process/equipment modification: This will involve changing a process or equipment to reduce or eliminate the hazard. One example of this would be for us to use a 6-foot cutting torch instead of a standard torch to increase the distance from the lead source to the worker's breathing zone.

Isolation: This is a method of limiting lead exposure to only those employees directly working with it. It may be as simple as regulating the area by posting signs and erecting barricades to keep non-essential personnel away from potential exposure areas.

E-2 Housekeeping Techniques: All surfaces shall be maintained as free as practicable of accumulations of lead.

E-3 Hygiene Facilities and Practices: We will make certain that in areas where employees are exposed to lead, without regard to the use of respirators, wash their hands and face prior to eating, drinking, smoking, or applying cosmetics.

Eating Facilities: Eating facilities or areas will be provided that are as free as practicable from lead contamination and are readily accessible to the workers.

Hand Washing Facilities: We will provide adequate hand washing facilities and provide assurance that each employee washes his or her face and hands at the end of each work shift.

F. ADMINISTRATIVE CONTROL SCHEDULE:

F-1 Administrative Controls: Work Schedule. If administrative controls are utilized to maintain employee exposure to below the PEL, then a complete copy of the administrative work schedule, including employee names, employee numbers, dates, location, activities, and starting and completion times, must be attached to this Compliance Program. Any deviations must be noted on the attached schedule.

G. MULTI-EMPLOYER WORKSITES:

G-1 Multi-Employer Notification: On multi-employer worksites, where the demo operation requires the establishment of a regulated work area, there is a responsibility to inform other employers on the site of the nature of NORTHSTAR's work, the existence of the regulated area, and the requirements pertaining to this area. Client then notifies the other employers whom he deems necessary and who are in the immediate vicinity of the regulated area.

G-2 Hazard Communication Training: Other contractors working in the area will be given a copy NORTHSTAR's Hazard Communication Program.

H. MEDICAL MONITORING:

H-1 Medical Monitoring Program: Medical monitoring of all personnel who are exposed to lead at or above the Action Level.

I. DOCUMENTATION/REPORTS:

I-1 Documentation: This compliance program will be submitted upon request to any affected employee or authorized employee representatives. This program will be revised or updated at least annually to reflect the status of the program.

I-2 Site Inspections: The Competent Person will conduct physical inspections of the work area at least daily to ensure that all the corrective measures necessary to decrease the risk potential for lead exposure are properly implemented, correctly maintained and appropriately effective. Oversight to ensure that the deficiencies noted during these inspections are corrected in a timely and consistent fashion will be the responsibility of the Project Manager and/or the Branch HSO. Comprehensive notes of these inspections must be recorded in a separate file or log and any deficiencies noted must be immediately corrected and reported to the project manager and the Regional Safety Manager.

OSHA's Form 300A (Rev. 01/2004)

Summary of Work-Related Injuries and Illnesse

Year 2024

U.S. Department of Labor
Occupational Safety and Health Administration

Form approved OMB no. 1218-0176

All establishments covered by Part 1904 must complete this Summary page, even if no injuries illnesses occurred during the year. Remember to review the Log to verify that the entries are and accurate before completing this summary.
Using the Log, count the individual entries you made for each category. Then write the totals making sure you've added the entries from every page of the log. If you had no cases write "0."

Employees former employees, and their representatives have the right to review the OSHA in its entirety. They also have limited access to the OSHA Form 301 or its equivalent. See 29 1904.35, in OSHA's Recordkeeping rule, for further details on the access provisions for these for

Post this Summary page from February 1 to April 30 of the year following the year covered by the form

Public reporting burden for this collection of information is estimated to average 50 minutes per response, including time to review the instruction, gather the data needed, and complete and review the collection of information. Persons are not required to respond to the collection of information displays a currently valid OMB control number. If you have any comments about these estimates or any aspects of this data collection, Department of Labor, OSHA Office of Statistics, Room N-3644, 200 Constitution Ave, NW, Washington, DC 20210. Do not send the this office.

Total Year Manhours: **404,776**

Attention: This form contains information relating to employee health and must be used in a manner that protects the confidentiality of employees to the extent possible while the information is being used for occupational safety and health purposes.

OSHA's Form 300 (Rev. 01/2004)

Log of Work-Related Injuries and Illnesses

Year 2024

U.S. Department of Labor
Occupational Safety and Health Administration

You must record information about every work-related injury or illness that involves loss of consciousness, restricted work activity or job transfer, days away from work, or medical treatment beyond first aid. You must also record significant work-related injuries and illnesses that are diagnosed by a physician or licensed health care professional. You must also record work-related injuries and illnesses that meet any of the specific recording criteria listed in 29 CFR 1904.8 through 1904.12. Feel free to use two lines for a single case if you need to. You must complete an injury and illness incident report (OSHA Form 301) or equivalent form for each for each injury or illness recorded on this form. If you're not sure whether a case is recordable, call your local OSHA office for help.

Form approved OMB no. 1218-0176

Establishment name **NorthStar Contracting Group, Inc.**

Proposal Form

Attachment G

RFP NO. 25-008
DECOMMISSIONING AND DEMOLITION (D&D) CONTRACTOR FOR THE FORMER BAPTIST HOSPITAL COMPLEX

PROPOSAL
(page 1)

Company Name: NorthStar Contracting Group, Inc.

The prices stated in the Bid Form include all costs and expenses for taxes, labor, equipment, materials, commissions, transportation charges and expenses, patent fees and royalties, labor for handling materials during inspection, together with any and all other costs and expenses for performing and completing the Work.
The Contractor's attention is again called to the fact that the quotations for the various items of Work are intended to establish a total price for completing the Work in its entirety and that the Contractor is familiar with prevailing weather conditions at the Site during the planned work period.
Should the Contractor feel that the cost for any item of the Work has not been established by the Bid Form or Basis of Payment, the cost for that Work shall be included by Contractor in some other applicable bid item, so that Contractor's proposal for the project does reflect his total price for completing the Work in its entirety.

ACTIVITY	***LUMP SUM***
Mobilization	$1,400,000.00
Permitting	$60,000.00
Pre-Demolition Submittals	$45,000.00
Project Management	$520,000.00
Site fencing and Security	$85,000.00
Dust, Noise, Odor, Erosion and Sediment Control	$150,000.00

Bid Clarifications

1. NorthStar and our 3rd Party subcontractor PSI, performed composite sampling of drywall joint compound during the second site visit. The samples were run under point count analysis and all samples were found to be "none detected". NorthStar will perform additional sampling upon award to confirm if and where sample results return 1% or greater. However, it is assumed that all drywall joint compounds, except where testing showed 2% in the survey at the ground floor mechanical room and corridor of the Main Hospital building, will be asbestos free.
2. Quantities of known and unknown asbestos were addressed many times in the RFI addenda. NorthStar has performed a thorough analysis of all materials and quantities in the locations listed on the survey and have come up with our own quantitative analysis. However, during the course of work, should an unknown suspect material that was not listed nor located in the survey (whether tested or not, or presumed to contain asbestos), be found and results are found positive for asbestos, we feel that should result in a change of conditions as there would be no way of knowing that unlisted material existed. NorthStar proposes adding an allowance of $500,000 to cover such unknown, unlisted materials. As the allowance would not be carried under NorthStar's contract value, any unused allowance money would remain with the City. Or if the City chose to carry that allowance value under NorthStar's contract, in addition to the base scope pricing, the unused balance would be credited back to the City via a deductive change order.
3. The VBE certification status of our subcontractor, Eager Beaver Recycling, has expired but they are currently in renewal process and will have their VBE status restored prior to the contract award date.

Small/Minority/Women-Owned Business

Attachment I

MINORITY AND WOMEN BUSINESS ENTERPRISE STATEMENT

The City has implemented a Minority/Women Business Enterprise (MWBE) program to assist certified minority- and women-owned businesses with identifying and participating in City of Pensacola procurement and construction opportunities as set in the Code of the City of Pensacola, Ordinance No. 4-15.

In order for a respondent to receive credit for being a MWBE vendor, it must perform useful business functions on the contract, have its principal place of business in Escambia, Santa Rosa, Okaloosa, Walton County in Florida or Mobile, Alabama, and have received a certification letter issued from the City of Pensacola.

There shall be no third-party beneficiaries of the Minority and Women Business Enterprise provisions of this solicitation or resulting contract. The City of Pensacola shall have the exclusive means of enforcement of the Minority and Women Business Enterprise Ordinance and any contract terms. The City of Pensacola is the sole judge of compliance. All solicitations and submittals awarded will be evaluated in accordance with the Code of the City of Pensacola.

Respondent's Name:	Respondent's Principal Place of Business
BKW -Karen Webb Action Environmental	5615 Duval Street, Pensacola, FL 32503 3007 N 50th Street, Tampa, FL 33619

If your firm is partnering with or subcontracting with a certified M/WBE, please provide the information requested below.

CITY OF PENSACOLA
SMALL BUSINESS ENTERPRISE STATEMENT

The Pensacola City Council adopted a Small Business Enterprise Ordinance #61-89. This ordinance encourages participation of small business in the City procurement process. Participation goals will be provided on a project-by-project basis, based on the availability of certified small businesses.

> **A Small Business is defined as an independently owned and operated business employing 50 or fewer permanent full-time employees and having a net worth of not more than $1 million. The business must be located in Escambia or Santa Rosa County.**

You must provide the following information sought in the accompanying forms for your submittal to be considered responsive:

RFQs **with** a specified Small Business Enterprise (SBE) goal will include a Bidder Questionnaire, Sub-contractor Solicitation, SBE Intent to Perform as a Sub-contractor and SBE Participation forms.

RFQs **without** a specified Small Business Enterprise (SBE) goal will include a Bidder Questionnaire form only.

Veteran Business

Attachment J

VETERAN BUSINESS ENTERPRISE STATEMENT

In order to foster economic development and business opportunities for service- disabled veterans and wartime veterans who have made extraordinary sacrifices on behalf of the nation, the City of Pensacola has adopted a Veteran Business Enterprise ("VBE") Preference. For further information regarding this program, please refer to Section 3-3-12 AND 3-3-13 of the Code of the City of Pensacola.

In order for a respondent to receive credit for being VBE vendor, it must perform useful business functions on the contract, have its principal place of business in Escambia or Santa Rosa County and be certified as a veteran business enterprise by the State of Florida Department of Management Services ("DMS") as set forth in Section 295.187 of the Florida Statutes as of the date set for submittal of bids. For purposes of the City's VBE Program, the respondent's principal place of business must be within Escambia County, FL, or Santa Rosa County, FL.

There shall be no third-party beneficiaries of the Veteran Business Enterprise Preference provisions of this solicitation or resulting contract. The City of Pensacola shall have the exclusive means of enforcement of the Veteran Business Enterprise Preference Ordinance and any contract terms. The City of Pensacola is the sole judge of compliance. All solicitations and submittals awarded will be evaluated in accordance with the Code of the City of Pensacola.

If the Respondent is a qualifying VBE, please complete the boxes below:
If not, please mark N/A.

BOND AMOUNT: 5% Five Percent of Amount Bid

PROJECT:
(Name, location or address, and Project number, if any)

RFP No. 25-008, Decommissioning and Demolition (D&D) Contractor for the former Baptist Hospital Complex

The Contractor and Surety are bound to the Owner in the amount set forth above, for the payment of which the Contractor and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, as provided herein. The conditions of this Bond are such that if the Owner accepts the bid of the Contractor within the time specified in the bid documents, or within such time period as may be agreed to by the Owner and Contractor, and the Contractor either (1) enters into a contract with the Owner in accordance with the terms of such bid, and gives such bond or bonds as may be specified in the bidding or Contract Documents, with a surety admitted in the jurisdiction of the Project and otherwise acceptable to the Owner, for the faithful performance of such Contract and for the prompt payment of labor and material furnished in the prosecution thereof; or (2) pays to the Owner the difference, not to exceed the amount of this Bond, between the amount specified in said bid and such larger amount for which the Owner may in good faith contract with another party to perform the work covered by said bid, then this obligation shall be null and void, otherwise to remain in full force and effect. The Surety hereby waives any notice of an agreement between the Owner and Contractor to extend the time in which the Owner may accept the bid. Waiver of notice by the Surety shall not apply to any extension exceeding sixty (60) days in the aggregate beyond the time for acceptance of bids specified in the bid documents, and the Owner and Contractor shall obtain the Surety's consent for an extension beyond sixty (60) days.

If this Bond is issued in connection with a subcontractor's bid to a Contractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

When this Bond has been furnished to comply with a statutory or other legal requirement in the location of the Project, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

Signed and sealed this 11th day of February, 2025.

POWER OF ATTORNEY
EVEREST REINSURANCE COMPANY

KNOW ALL PERSONS BY THESE PRESENTS: That Everest Reinsurance Company, a corporation of the State of Delaware ("Company") having its principal office located at Warren Corporate Center, 100 Everest Way, Warren, New Jersey, 07059, do hereby nominate, constitute, and appoint:

Desiree Cardlin, Colette R. Chisholm, Camille Maitland, George O. Brewster, Nelly Renchiwich, Thomas Bean, Robert T. Pearson, Susan Lupski, Dana Granice, Michelle Wannamaker, Katherine Acosta, Margaret A. Ginem, Karolynne Ramirez, Louis J. Spina

its true and lawful Attorney(s)-in-fact to make, execute, attest, seal and deliver for and on its behalf, as surety, and as its act and deed, where required, any and all bonds and undertakings in the nature thereof, for the penal sum of no one of which is in any event to exceed UNLIMITED, reserving for itself the full power of substitution and revocation.

Such bonds and undertakings, when duly executed by the aforesaid Attorney(s)-in-fact shall be binding upon the Company as fully and to the same extent as if such bonds and undertakings were signed by the President and Secretary of the Company and sealed with its corporate seal.

This Power of Attorney is granted and is signed by facsimile under and by the authority of the following Resolutions adopted by the Board of Directors of Company ("Board") on April 21, 2016:

***RESOLVED**, that the President, any Executive Vice President, and any Senior Vice President are hereby appointed by the Board as authorized to make, execute, seal and deliver for and on behalf of the Company, any and all bonds, undertakings, contracts or obligations in surety or co-surety with others and that the Secretary or any Assistant Secretary of the Company be and that each of them hereby is authorized to attest to the execution of any such bonds, undertakings, contracts or obligations in surety or co-surety and attach thereto the corporate seal of the Company.*

***RESOLVED, FURTHER**, that the President, any Executive Vice President, and any Senior Vice President are hereby authorized to execute powers of attorney qualifying the attorney named in the given power of attorney to execute, on behalf of the Company, bonds and undertakings in surety or co-surety with others, and that the Secretary or any Assistant Secretary of the Company be, and that each of them is hereby authorized to attest the execution of any such power of attorney, and to attach thereto the corporate seal of the Company.*

***RESOLVED, FURTHER**, that the signature of such officers named in the preceding resolutions and the corporate seal of the Company may be affixed to such powers of attorney or to any certificate relating thereto by facsimile, and any such power of attorney or certificate bearing such facsimile signatures or facsimile seal shall be thereafter valid and binding upon the Company with respect to any bond, undertaking, contract or obligation in surety or co-surety with others to which it is attached.*

IN WITNESS WHEREOF, Everest Reinsurance Company has caused their corporate seals to be affixed hereto, and these presents to be signed by their duly authorized officers this 17th day of December 2024.

Everest Reinsurance Company

By: Anthony Romano, Senior Vice President

On this 17th **day of December 2024**, before me personally came Anthony Romano, known to me, who, being duly sworn, did execute the above instrument; that he knows the seal of said Company; that the seal affixed to the aforesaid instrument is such corporate seal and was affixed thereto; and that he executed said instrument by like order.

Affidavit Regarding the Use of Coercion for Labor and Services
Pursuant to Florida Statute 787.06(13)

Vendor Name: NorthStar Contracting Group, Inc.

Vendor FEIN: CGC1513686 Phone Number: (407) 855-2365

Vendor's Authorized Representative Name and Title: John Jenkins- Vice President

Address: 9135 Avenue C

City: Orlando State: FL ZIP: 32824

Email Address: jjenkins@northstar.com

Section 787.06(13) Florida Statutes requires all nongovernmental entities executing, renewing, or extending a contract with a governmental entity to provide an affidavit signed by an officer or representative of the nongovernmental entity under penalty of perjury that the nongovernmental entity does not use coercion for labor or services.

The undersigned hereby certifies that he/she is an officer or authorized representative of the vendor identified above and that said vendor does not use coercion for labor or services as defined in Section 787.06 Florida Statutes.

Florida Statute 787.06

(2)(a) "Coercion" means:

1. *Using or threatening to use physical force against any person;*
2. *Restraining, isolating, or confining or threatening to restrain, isolate, or confine any person without lawful authority and against her or his will;*
3. *Using lending or other credit methods to establish a debt by any person when labor or services are pledged as a security for the debt, if the value of the labor or services as reasonably assessed is not applied toward the liquidation of the debt, the length and nature of the labor or services are not respectively limited and defined;*
4. *Destroying, concealing, removing, confiscating, withholding, or possessing any actual or purported passport, visa, or other immigration document, or any other actual or purported government identification document, of any person;*
5. *Causing or threatening to cause financial harm to any person;*
6. *Enticing or luring any person by fraud or deceit; or*
7. *Providing a controlled substance as outlined in Schedule I or Schedule II of s. 893.03 to any person for the purpose of exploitation of that person.*

(2)(e) "Labor" means work of economic or financial value.

(2)(h) "Services" means any act committed at the behest of, under the supervision of, or for the benefit of another. The term includes, but is not limited to, forced marriage, servitude, or the removal of organs.

Under penalties of perjury, I declare that I have read the foregoing document and that the facts stated in it are true.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

1. The Submitter certifies, to the best of its knowledge and belief, that the Submitter and/or any of its Principals:
   A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.
   B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and
   C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.
2. The Submitter has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.
   A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

      This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.
   B. The Submitter shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Submitter learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
   C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Submitter's responsibility. Failure of the Submitter to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Submitter nonresponsive.
   D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Submitter is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
   E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Submitter knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor that is debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party that is debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

   A. The name of the subcontractor.

   B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

   C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

   D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE BIDS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more bids which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a bid received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie bids will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2) Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).

4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5) Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6) Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

STATEMENT OF NO RESPONSE
RFP #25-008

If you are unable to submit a proposal at this time, please complete the following and return by e-mail to purchasing@cityofpenscola.com. Your choices or comments below will assist us in properly notifying you of future opportunities.

We have declined to respond to the solicitation for the following reason(s):

SPECIFICATIONS	NATURE OF AWARD
___ Specifications too "tight" (i.e., limited to one brand or manufacturer)	___ Insufficient time to respond
___ Specifications unclear	___ Equivalent options not offered
___ Unable to meet specifications	___ Other (please explain below)

Explanation:
N/A

We request to:

_____ remain in this service category for future City of Pensacola solicitations.

_____ be removed from this service category and remain on the City's solicitation list.

_____ be removed from the City's solicitation list.

REVISED SCHEDULE OF EVENTS (subject to change)

Date	Activity
January 14, 2025	Published RFP
February 4, 2025, 9:00 a.m. Baptist Hospital Complex 1000 West Moreno Street Pensacola, FL 32501	Mandatory Pre-Proposal meeting / Walkthrough
February 12, 2025, 10:00 a.m.	Questions due
February 26, 2025, 2:30 p.m.	Proposals due
February 27, 2025, 10:00 a.m.	Open proposals
March 7, 2025	Distribute Materials for Review
March 20, 2025, 10:00 a.m. City Hall 1st floor conference room 222 West Main St, Pensacola, FL 32502	Evaluation Committee Meeting Ranking / Shortlisting Proposals
April 3, 2025, 9:00 a.m. City Hall 1st floor conference room 222 West Main St, Pensacola, FL 32502	Evaluation Committee Meeting Oral Presentations Recommendation of Contract Award
April/May, 2025	Contract Award
Summer/Fall, 2025	Notice to Proceed

All times are Central Standard Time

1. The RFP requires the contractor to quantify all ACM, PCB, and regulated wastes, necessitating additional site visits for our team and subcontractors to access each building. Given the facility's size and the inability to rely on the survey information, these visits may span multiple days and require more than one trip to accurately capture all required information. Can you confirm multiple additional visits will be permitted and the process for coordinating these?

A. Additional visits will not be allowed. The expectation is that the Contractor will include in their bid pricing to cover abatement, removal and disposal of all ACM and other hazardous materials based on the available reports and their experience with demolition of similar structures.

Updated Hazardous Materials reports are included as an attachment to this addendum. The updated reports will also be considered indicative and are not to be considered detailed inventories of all materials at the Site.

The Hazardous Materials reports can be accessed at these links:

240761-AL (Hospital Towers) 1717 N E Street Asbestos, Lead, & Hazmat Survey

240761-AL Main Hospital 1017 W Avery St Asbestos, Lead, & Hazmat Survey

2. Should we invite our subcontractors to the site visit / walkthrough on January 23rd? Or will a secondary site visit be made available?

A. The number of representatives per Bidder is limited to three (3). It is up to the bidder to decide whether any of the 3 are subcontractors.

There is no planned second visit.

NOTE: Additional information - the Contractor is expected to include in their planning routine and contingency measures to secure waste and other site materials in all cases of high winds or storms.

Addendum Date: February 5, 2025

CITY OF PENSACOLA, FLORIDA
ADDENDUM #2

DECOMMISSIONING AND DEMOLITION (D&D) CONTRACTOR FOR THE FORMER BAPTIST HOSPITAL COMPLEX

RFP No. 25-008

The following items take precedence over the documents for the item named above. All other terms and conditions shall remain the same.

A SIGNED COPY OF THIS ADDENDUM MUST BE RETURNED WITH YOUR SUBMITTAL AS ACKNOWLEDGEMENT.

Company: NorthStar Contracting Group, Inc. Date: 2/5/25

Authorized Representative: John Jenkins (Printed Name) Title: Senior Vice President

Signature: 
1. A second site visit will be allowed on **Tuesday, February 11th**, 2025, from **8:30 A.M. to 4:30 P.M.**, local time. There will be an enforced break from **12:00 P.M. to 12:45 P.M.**

    - Employees from Baptist and Geosyntec will be onsite for sign-ins and sign-outs.
    - Everyone signs in and out.
    - Everyone signing in needs to sign the City's waiver.
    - Contractor teams are allowed unsupervised access.
    - Contractor teams can be up to 5 persons but do not need to be the same 5 all day. For example, for a particular team there may be 4 specialty subs in the morning and a different set of subs in the afternoon.
    - Contractors can carry out discrete sampling but no removal of walls, ceiling, etc.

Questions and Answers

1. Can clean concrete generated by the demolition process be used to backfill voids on site? If so, please specify to what dimension the material shall be crushed.

A. Clean concrete can be crushed to meet *Specification 911: BASE AND STABILIZED BASE MATERIALS; Recycled Concrete Aggregate (RCA), Florida Department of Transportation Standard Specifications for Road and Bridge Construction, FY 2025-26* and used as compacted material to backfill voids left at the site following demolition.

2. If the crushing of concrete is acceptable, would the City like the remainder, or some portion thereof, stockpiled on site for use in new development?

A. No materials stockpiles are to be left onsite at the completion of the project

3. Does the aggregate base beneath the asphalt need to be removed?

A. The aggregate base below existing pavements does not need to be removed expect as may be required in some locations to ensure positive drainage of the site at completion of the project

3. Can an additional site visit be allowed for the week of 2/10/25? 2 days will be preferable with as many as 4 personnel from the contractor.

A. See Page 1 of this addendum.

4. Can we have one more site visit (If possible 4-5 Hours long)?

A. See Page 1 of this addendum.\

5. During the site visit, we saw some possible hidden asbestos. If we find asbestos during demolition, is it considered a change order?

A. As stated in the RFP, Contractors are responsible to abate, remove, and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations, and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

Addendum Date: February 12, 2025

CITY OF PENSACOLA, FLORIDA
ADDENDUM #3

DECOMMISSIONING AND DEMOLITION (D&D) CONTRACTOR FOR THE FORMER BAPTIST HOSPITAL COMPLEX

RFP No. 25-008

The following items take precedence over the documents for the item named above. All other terms and conditions shall remain the same.

Company: NorthStar Contracting Group, Inc. Date: 2/13/25

Authorized Representative: John Jenkins (Printed Name) Title: Vice President

Signature:

Section 3.5 is revised as follows:

All its employees and those of its lower tier subcontractors who may encounter any ACM, Lead based paint or other Hazardous Materials are encouraged to have completed 40-hour HAZWOPER training in accordance with 29 CFR 1910.120 with documentation of such be on file with the respective Contractor.

Personnel that will be working with ACM or Lead based paint must have completed training in accordance with OSHA 29 CFR 1926.1101 (Asbestos) and OSHA 29 CFR 1926.62 (Lead), be enrolled in medical monitoring programs, and receive other training as required by relevant regulatory requirements. Documentation to be maintained on file by the Contractor.

Questions and Answers

1. The OHC Survey shows the combined total for Towers 1 and 2 having only 23,000 SF of Exterior aggregate Asbestos Cementitious panels. Our calculations show roughly 23,000 SF per tower or 46,000 SF (Based on 1 Tower 400’ perimeter x 60’

High, less windows). Should we assume all panels are positive? Therefore, we should have approximately 46,000 SF for both towers combined.

A. As stated in the RFP, Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

The supplemental surveys carried out by OHC were intended to mainly provide indicative information in areas that were not accessible at the time of the surveys carried out by Intertek PSI in 2023 but there is some overlap with areas surveyed by Intertek PSI in 2023.

The Main Hospital Building Survey carried out by Intertek PSI in 2023 did not include a location map.

2. Are the surveys provided with Addendum 1 from OHC Environmental to be considered additive quantities to the previous quantities provided in the PSI reports? Or are the OHC reports to be considered a complete listing of all ACM?

A. Please see the answer to Question 1.

3. The OHC Hospital Towers survey included location maps of areas that tested positive. The Main Hospital survey did not include these maps. Can we get sampling map for the Main Hospital showing locations that were considered positive?

A. Please see the answer to Question 1.

4. OHC Hospital Towers survey contained drawings for Tower 3 showing the large areas of black mastic (considered asbestos) on floors 2, 4 and 5. When cross referencing the table, we could not find where Tower 3 had positive samples for the flooring. Both Tower 2 (built 1977) and Tower 3 (built 1990) were grouped together under the same HSA. As no positive samples were provided for Tower 3, should the black mastic be considered negative?

A. The analytical results for flooring samples collected on floors 2,4 and 5 for Tower 3 were negative for asbestos. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials.

Addendum Date: February 19, 2025

CITY OF PENSACOLA, FLORIDA
ADDENDUM #4

DECOMMISSIONING AND DEMOLITION (D&D) CONTRACTOR FOR THE FORMER BAPTIST HOSPITAL COMPLEX

RFP No. 25-008

The following items take precedence over the documents for the item named above. All other terms and conditions shall remain the same.

A SIGNED COPY OF THIS ADDENDUM MUST BE RETURNED WITH YOUR SUBMITTAL AS ACKNOWLEDGEMENT.

Company: NorthStar Contracting Group, Inc. Date: 2/19/25

Authorized Representative: John Jenkins (Printed Name) Title: Senior Vice President

1. Please find attached TF10686.01_FBHC-004-AREAS OF PETROLEUM IMPACTED SOILS.

Questions and Answers

1. **Referenced Drawing and or Specification section:** General Question / Clarification request: I know it was addressed in the addendum but with the size and scope of the project. Would the city reconsider an additional site walk so subs can attend.

A. A second site walk was scheduled for 11 February 2025. No additional site walks are planned.

2. **Referenced Drawing and or Specification section:** 1.3.3 Hazardous Materials Survey & Section 3.12 HAZARDOUS SUBSTANCES
This section states, "*The Contractor is responsible for removal and disposal of all ACM and other hazardous materials associated with demolition of the FBHC*"

Additionally in 3.12 *it states "Indeed, if additional survey work is needed, the Contractor needs to include this in its proposal. There are no guarantees that the Pre-demolition surveys are complete detailed inventories of the extent of materials to be managed."*

Question / Clarification request: Is the intent for the contractor to include /Carry and additional allowances for identifying, testing of concealed and unknown materials as well as an estimated cost for removals?

With out a destructive survey to identify potential concealed suspect material and additional sampling results to confirm the presence of ACM, it is not possible to Capture "**A**LL" potential materials based off a visual site visit.

A. As stated in the RFP Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

3. **Referenced Drawing and or Specification section**: 3.4 Schedule

Question / Clarification request: This section identifies Primavera P6 as required to prepare and maintain the project schedule. Would an alternative such as Microsoft project be acceptable if all other requirements are met?

A. Microsoft Project will be an acceptable alternative to Primavera P6.

4. **Referenced Drawing and or Specification section:** 3.6.1 Air Monitoring

Question / Clarification request: This requires third party monitoring for dust with 4 station locations identified. The one station is within the workers breathing zone. I would assume this is a personal sample. Must the contractor use a third party for this station, or can we perform our own personal monitoring for asbestos and demolition?

A. Worker health and safety monitoring can be carried out as a part of the Contractor's overall health and safety program and in accordance with relevant regulatory requirements.

Other required monitoring is to be carried out by an independent third-party engaged by the Contractor.

5. **Referenced Drawing and or Specification section:** 3.6.2 Noise monitoring

Question / Clarification request: What are the decibel level monitoring requirements of the demolition permit for the city of Pensacola or this project? We could not find it on the website.

A. The code of ordinances is silent on the decibel level. This would be construed to allow normal noise of the demolition activities within the allowable time frames as listed below. The sections below pertain to the demolition and noise:

Sec. 14-2-136 (i)Demolition work shall be conducted in compliance with the noise

regulations for construction as well as applicable nuisance ordinances contained in this Code.
Sec. 8-1-13 (a)It shall be unlawful for any person to willfully make, continue or cause to be made or continued any loud and raucous noise, which term shall mean any sound which, because of its volume level, duration, and character, annoys, disturbs, injures or endangers the comfort, repose, health, peace or safety of reasonable persons of ordinary sensibilities within the limits of the city. (7) Construction or repairing of buildings. The erection, including excavation, demolition, alteration or repair of any building other than between the hours of 6:00 a.m. and 7:00 p.m. on Monday through Saturday, except in case of urgent necessity in the interest of public health and safety, and then only with a permit from the director of inspections, which permit may be granted for a period not to exceed three days while the emergency continues and which permit may be renewed for periods of three days or less while the emergency continues. If the director of inspections should determine that the public health and safety will not be impaired by the erection, demolition, alteration or repair of any building or the excavation of streets and highways within the hours of 7:00 p.m. and 6:00 a.m., and if he or she shall further determine that loss or inconvenience would result to any party in interest, he or she may grant permission for such work to be done within the hours of 7:00 p.m. and 6:00 a.m., including Sundays, upon application being made at the time the permit for work is awarded or during the progress of the work.

6. **Referenced Drawing and or Specification section:** 3.6.2 Noise monitoring
Question / Clarification request: Can a copy of noise zone maps be provided for review to see the potential impact as Identified in the code of the city of Pensacola, FL Sec. 12-10-4. Sound Level reduction.

A. This applies to the Airport Zone only. This is not applicable to the Baptist Demolition Project.

7. **Referenced Drawing and or Specification section:** 3.2 Permitting
Question / Clarification request: Will the fees for the demolition permit with the city of Pensacola be waived as this is a project for the city? Assuming the permit still needs to be filed.

A. The demolition contractor is required to pay all permit fees. Permit fees cannot be waived.

8. **Referenced Drawing and or Specification section:** 3.8 Demolition Paragraph 3
Question / Clarification request: States" *Contractor shall demolish the above-grade structures within the designated area completely (unless noted), leaving bare ground. All curbing, bollards, sheds, shrubs, etc., shall be removed and resulting pipes, voids, sump, etc., shall filled with concrete to provide a safe even surface for future Site use"*

Please clarify is crushed concrete/ Brick/ Block generated from demolition acceptable?

A. Clean concrete can be crushed to meet Specification 911: BASE AND STABILIZED BASE MATERIALS; Recycled Concrete Aggregate (RCA), Florida Department of Transportation Standard Specifications for Road and Bridge Construction, FY 2025-26 and used as compacted material to backfill voids left at the site following demolition.

9. **Referenced Drawing and or Specification section:** 3.12 HAZARDOUS SUBSTANCES

Question / Clarification request: Are there any radioactive materials associated with medical scanners or X-ray equipment that need to be removed and disposed of by the contractor, or have they already been decommissioned and removed?

A. Contractor can assume that medical scanners and x-ray equipment have been removed.

10. **Referenced Drawing and or Specification section:** 3.12 HAZARDOUS SUBSTANCES

Question / Clarification request: Are any medical waste, sharps or Bloodborne pathogen waste present that needs to be accounted for or has the building been cleaned and removed of these materials? If present, please identify and quantify.

A. Contractor can assume that medical waste has been removed.

11. **Referenced Drawing and or Specification section:** 3.12 HAZARDOUS SUBSTANCES Paragraph

States" Waste Manifests for all relevant demolition debris and to coordinate with City for signature by the designated City representative"

Question / Clarification request: Will the onsite City representative be allowed to sign the manifest? Will they be able to pre-sign or will they sign each load? Can the contractor gain approval to sign as agent of the owner to expedite?

A. The on-site City representative will sign each load.

12. **Referenced Drawing and or Specification section:** 3.12.1 ACM

This specifies that All ACM materials and Materials less than 1% asbestos must be removed prior to demolition by a Florida-Licensed Asbestos Contractor.

Question / Clarification request: Please clarify as less than 1% asbestos is considered Not ACM.

Can Items containing less than 1% be removed per OSHA Standard requirements for <1% Acm (not asbestos) and disposed of as C&D?

A. The disposal of asbestos containing materials (ACM) including regulatory provisions of the Clean Air Act National Emission Standard for Asbestos (Asbestos NESHAP) that pertain to demolition of buildings that contain asbestos shall apply

to this project. The Asbestos NESHAP regulations are codified at 40 C.F.R., Part 61, Subpart M.

Under the Asbestos NESHAP, regulated asbestos containing material (RACM) includes any asbestos containing material (ACM) that contains more than 1 percent asbestos is friable (i.e., able to be crumbled when dry) or has the potential to become friable and release asbestos during demolition. The contractor should assume that ACM containing more than 1 percent asbestos identified within the project limits either prior to or during demolition shall require disposal at a permitted Class I solid waste disposal Facility. Disposal of ACM containing less than 1% asbestos, as determined through pre-disposal testing, at a permitted C&D landfill must be verified with the facility and written correspondence of this communication shall be transmitted to the City prior to transport and disposal.

For a complete definition of RACM under the Asbestos NESHAP, please refer to 40 C.F.R. § 61.141.

13. Referenced Drawing and or Specification section: 3.5 Health and Safety Line 6-9

The specification requires" At a minimum all its employees and those of its lower tier subcontractors who may encounter any ACM, Lead based paint or other Hazardous Materials must have completed 40-hour HAZWOPER training in accordance with 29 CFR 1910.120"

- OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) standards are for workers that will perform: Uncontrolled hazardous waste cleanup operations, Corrective actions involving cleanup operations at RCRA sites, Hazardous waste operations at treatment, storage and disposal (TSD) facilities, Operations at non-TSD facilities that generate hazardous waste, and Emergency response actions involving the potential release of hazardous substances. Which do not appear to be applicable to this scope of work.

Question / Clarification request:

While I concur with the fact that there is potential for unknown Hazardous waste that be encountered during project execution, the blanket requirement for all those handling ACM, lead and Universal waste appears excessive for the following reasons:

- Universal waste removal is completed by removing Components (intact so they do not become Haz- waste) that are non-hazardous but regulated materials therefore will need to be packaged, labeled and transported. Materials generated will not exceed small quantity (SQG) thresholds as specified by the EPA so specific Universal waste handling training will satisfy federal requirements of 40 CFR 273.9.
- The presence of lead paint will not require abatement prior to demolition and the applicable OSHA Standard would be Title 29 Code of Federal Regulations (CFR), Part 1926.62 (lead in construction) and EPA TCLP testing / characterization for demolition debris containing lead-based paint and lead awareness training would be sufficient to meet all regulatory requirements. The

presence of lead shield in the walls does not expose workers to uncontrolled lead exposure and its removal is not lead abatement. The sheets will be removed intact as a full component and recycled as scrap lead. This work falls under lead in construction as well and no lead abatement (removing lead from substrate) will be required.

- Asbestos, the state of Florida or federal regulations do not require a HAZWOPER certification for the removal of asbestos containing materials for individuals only training from an AHERA training facility.

Alternate Solution- Would specific training such as lead in construction/ lead awareness, Universal waste handling specific training and required asbestos training per FL / federal guidelines be acceptable if there were a team of HAZWOPER certified individuals onsite such as Site Safety, a supervisor (competent person) and a small team to handle specific unknown or hazardous wastes? This would be a more cost-effective solution while still maintaining regulatory compliance and an appropriate level of safety in the event of an unknown Hazardous waste be encountered.

A. Section 3.5 is revised as follows:

All its employees and those of its lower tier subcontractors who may encounter any ACM, Lead based paint or other Hazardous Materials are encouraged to have completed 40-hour HAZWOPER training in accordance with 29 CFR 1910.120 with documentation of such be on file with the respective Contractor.

Personnel that will be working with ACM or Lead based paint must have completed training in accordance with OSHA 29 CFR 1926.1101 (Asbestos) and OSHA 29 CFR 1926.62 (Lead), be enrolled in medical monitoring programs, and receive other training as required by relevant regulatory requirements. Documentation to be maintained on file by the Contractor.

14. Referenced Drawing and or Specification section: Addendum 1 OHC Survey

Question / Clarification request: Do the two OHC surveys (Addendum 1) supersede the previous PSI surveys? Meaning is the revised survey the extent of material or are we to consider the combination of the 2 survey PSI and the OHC?

A. The supplemental surveys carried out by OHC were intended to mainly provide indicative information in areas that were not accessible at the time of the surveys carried out by Intertek PSI in 2023 but there is some overlap with areas surveyed by Intertek PSI in 2023.

Example- Main Hospital-OHC Survey has roughly 100K SF of floor tile the PSI Survey has 300K SF. Did 200K of get sampled away or is it now 400K SF or still 300K SF? It is unclear and we cannot determine by visual inspection if flooring contains acm. The supplemental OHC survey does not refer to the PSI survey for clarity.

15. Referenced Drawing and or Specification section: Addendum 1 OHC Survey main Hospital ACM Survey #39

There is no quantity provided, under the **Material Location** column it lists: Ground floor SC-F Corridor by mechanical room but under **Quantity, Condition, Friability** Column it list: Throughout Building Good Non-Friable. It appears that this is based off of Sample ID 1017-39C which was 2% Chrysotile but it is grouped with samples 1017-39A & 1017-39B which Were NAD in TABLE 3: Materials sampled For asbestos.

Question / Clarification request: Please clarify is the positive Joint compound confined to just the ground floor SC-F Corridor by mechanical room or is the consultant assuming the material is homogeneous and throughout the 1st floor and that is what is meant by "throughout the building"? Floors 2 thru 4 were NAD but is the assumption that the material is homogeneous and throughout the building?

A. As stated in the RFP, Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

16. **Referenced Drawing and or Specification section:** Addendum 1 OHC Survey Vapor Barrier under Concrete Foundation PACM ASSUMED

Question / Clarification request: When slabs are removed and assumed ACM Vapor Barrier is under the concrete are we to assume that when removing the slab that the concrete will be contaminated with ACM and require disposal as it most likely won't be able to be separated?

A. As stated in the RFP Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order

17. **Referenced Drawing and or Specification section**: Attachment C Asbestos Report & Addendum 1 OHC survey reports (both).

The survey reports Identify the main hospital and the towers specifically. To the west there are 3 buildings/ structures: the Powerhouse, Energy Center and the Annex.

Question / Clarification request: Are these buildings included in the material surveys, or will the contractor need to complete a survey in order to file a demolition notification? If included which survey?

A. As stated in the RFP Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement,

removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order. If supplemental reports are needed, they will be a part of the Contractors scope.

18. **Referenced Drawing and or Specification section-** 1.3.3 Hazardous Materials Surveys

Question / Clarification request: In the past on select projects county landfill tipping fees were waived for ACM. Is the city able to get tipping fees waived for asbestos disposal for this project?

A. The demolition contractor is responsible for tipping fees.

19. **Referenced Drawing and or Specification section-:** Addendum 1 OHC Survey Table 1 ACM Summary Main Hospital

Question / Clarification request: Item 19 Ground Floor Kitchen Area Windows Interior Door and Window Caulking identifies that the door and window caulk contain 5% ACM however under Quantity, Condition, Friability it states that "Throughout Good Non-Friable". Is the positive interior door and window caulk confined to the Ground Floor Kitchen area window or is this saying that ALL interior doors and windows are to be assumed to have positive Window caulking? Please clarify.

A. As stated in the RFP Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

20. **Referenced Drawing and or Specification section:** Addendum 1 OHC Survey Table 1 ACM Summary Main Hospital.

Question / Clarification request: Item 91 Ground Floor Boiler Room and Accessible Crawlspaces. Identifies 3,500 LF of Friable ACM Piping and then states *"(Likely more in Crawlspace couldn't be further Quantified)* Does the 3,500 LF Include an estimated Qty for the crawl space? How much additional piping should be assumed in the crawl space by the contractor? If the quantity can't be provided can the number of ACM pipes observed entering the crawl space be provided so the LF of pipes can be calculated.

A. As stated in the RFP Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

21. Lead based/containing paints are traditionally left in place on all demolition jobs – material can go C&D and/or steel coated or treated in lead based/containing paint can be recycled – since this is common practice is it acceptable to manage lead base paint in conjunction with demolition efforts?

A. LBP can be managed as C&D and it shall be the responsibility of the contractor to assure that LBP is managed in full accordance with applicable local, state and federal regulations.

22. Will the city be doing any additional sampling for hazardous and/or regulated materials during the course of work outside of contractor requests (i.e. at their own accord/discretion)?

A. The City is not anticipating carrying out any additional sampling at this time.

23. Will /have bulk chemicals been removed from the site?

A. The Contractor can assume that bulk chemicals have been removed from the site.

24. Has all jet fuel been removed from the site?

A. The Contractor can assume that bulk fuel has been removed from the site.

25. Is any bulk petroleum left on site?

A. The Contractor can assume that bulk fuel has been removed from the site.

26. Have glycol systems been fully emptied and if not, can the City confirm if Glycol used in chilling systems was polypropylene or ethylene?

A. They are not emptied, and they are ethylene.

27. Is the contractor to do CFCs or has this been previously done?

A. Refrigerants have not been done.

28. Is there a list of radioactive exit signs in the facility to be managed by the contractor?

A. We are not aware of any in the building.

29. Can black mastic and flooring mastics under floor-tile and other category I materials (roofing/VAT) be left in place and managed during demolition – Florida law allows for this category I non-friable material to be left place and managed during demolition as C&D and landfilled as such.

A. Florida law does allow for Category I non-friable asbestos-containing materials to

be left in place and managed during demolition, as long as they remain non-friable and are handled according to the applicable asbestos standards. This means that the material must not be crumbled, pulverized, or reduced to powder by hand pressure during demolition activities. The contractor shall follow all relevant regulations and guidelines to ensure safety and compliance.

30. What will be the process if suspect acm materials are discovered during demolition that were not listed in the survey? Will the city hire a licensed asbestos inspector to sample or will the contractor be responsible to hire the asbestos inspector for sampling.

A. As stated in the RFP Contractors are responsible to abate, remove and dispose of all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

31. Will we need to perform full air clearance testing in each area post-abatement before demolition begins or is visual clearance by competent person acceptable?

A. The abatement contractor(s) are required to perform full air clearance testing in each area post-abatement before demolition begins. Visual clearance by a competent person is not considered sufficient.

32. Will the city be providing a third party air monitor consultant during asbestos abatement? If not, is the contractor required to provide?

A. Contractor is to provide an independent third-party to carry out air monitoring

33. Who will be responsible for the final inspection and approval of the asbestos abatement work?

A. The Contractor shall be responsible for providing a written inspection report prepared by a Florida licensed asbestos inspector upon completion of the abatement for review and acceptance from the City.

34. It appears that flooring mastic is categorized as both Category I and Category II non-friable can all mastics be reclassified as category I non-friable asbestos? Does the contractor have the ability to bring in their own state licensed asbestos inspector to reclassify asbestos containing materials?

A. Blanket reclassification of all mastics is not acceptable. However, the city has no objection to the Contractor conducting additional classification sampling and testing by a Florida licensed asbestos inspector.

35. Are there any biohazard concerns with the roof top vents/systems marked as biohazard? If so, will the city handle these systems?

A. No. Those were exhausted Airborne Infection Isolation Rooms. The warning was required, when treating patients, to let maintenance team members know that the purpose of that exhaust was for respiratory precautions. We are well past the dwell time where a respiratory virus can live on a surface.

36. Page 1 of the RFP provides a link to specifications, however clicking on the link only takes the user to the City's bid postings site with no direct link to the project or specifications. Could you please provide the referenced specifications?

A. That was an error on the City's part. The RFP portion of the project has not been posted to the City website. The RFP, additional documents, and addenda (or links to same) have been emailed to the RFQ shortlisted contractors.

37. Does Storm Water monitoring need to be performed by a 3rd party or can this be done by an appropriately trained and licensed member of the Contractor?

A. The Stormwater monitoring can be carried out by Contractor staff that have successfully completed the Florida Department of Environmental Protection, Florida Stormwater, Erosion, and Sedimentation Control Inspector Program: https://www.fsesci.com/

38. Is the specified 6 ft chain link fence to be driven post or panel fencing? Is it to be removed or turned over to the Owner at the completion of work?

A. All fencing to be removed by Contractor at the completion of the Work.

39. Could a drawing be provided showing the number and locations of utilities that need to be disconnected?

A. Demolition Contractor is responsible for locating utilities.

40. Is there a maximum depth of removal for slabs and foundations or are they to be removed in their entirety?

A. Slabs and foundations should be removed in their entirety unless directed by the City on a case by case basis for exceptionally deep foundations.

41. The asbestos survey for the Main Hospital lists Vapor Barrier Mastic on foundations as Presumed ACM with no sampling. Is the Contractor to assume removal and disposal of all Main Hospital foundations as ACM? This will add considerable costs to the project, and the Contractor has no way of verifying the information prior to bid. Are they to be assumed for the Medical Towers as well?

A. As stated in the RFP Contractors are responsible to abate, remove and dispose of

all ACM, LBP, and other hazardous materials within the buildings. The reports provided are not complete inventories and should only be considered indicative of the types, locations and extent of ACM and other hazardous materials. Abatement, removal and disposal of ACM or other hazardous materials encountered during the work that were not identified in the reports will not be an event of Change Order.

42. Section 3.12.2 requires all Lead Based Paint (LBP) to be abated prior to demolition. This is above and beyond regulatory requirements and will add considerable costs to the project. In lieu of abatement, can Contractor manage all LBP in accordance with an OSHA approved plan and perimeter air monitoring as is standard on demolition projects?

A. LBP can be managed as C&D and it shall be the responsibility of the contractor to assure that LBP is managed in full accordance with applicable local, state and federal regulations including air monitoring.

43. Section 3.12.5 references PHA soils being shown on drawing FBHC-004. The Attachment A FBHC drawings do not have a sheet -004 and sheet C-04 does not show the location of the soils, tanks or piping. Please provide a drawing showing this location(s) as special precautions may be required when working in/adjacent to the areas even if the removal is not included in the project scope.

A. The attached drawings (FBHC-004, dated February 2025) shows the approximate surface extent of areas where the hydrocarbon impacted soils are anticipated. These areas will be physically marked in the field by the City prior to the start of demolition activities.

44. After final grading can the area be re-vegetated via seeding or does sod have to be installed?

A. Sod or hydro seed is preferred. Seedlings can be used but erosion control must remain in place and continue to be inspected until the site is secured.

45. Will electronic (emailed) proposals be acceptable or do they need to be hard copy?

A. The submissions must be hardcopy, per the RFP portion of the project, page 1.

> "Sealed and complete hardcopy proposals **with original or electronic signature**, and **five (5) additional copies**, plus **one (1) complete and identical electronic copy (PDF)** on flash drive or CD…"

46. GeoSyntec developed a project SWPPP for bid purposes, can the information presented in it be used by the awarded contractor? If yes, how does one go about obtaining the required approvals?

A. The SWPPP developed by Geosyntec is for informational and guidance purposes

only. The Contractor shall be responsible for preparing detailed SWPPP, meeting the minimum requirements of the State of Florida Department of Environmental Protection (FDEP) NPDES Generic Permit for Stormwater Discharge from Large and Small Construction Activities, the informational SWPPP prepared by Geosyntec, and other state and/or local entities. The SWPPP shall depict proposed phases for demolition activities and the best management practices (BMPs) and erosion and sediment controls (ESCs) to be implemented during each phase.

47. For the SWPP Plan Does the city pre, proposed and post drawings for each demo site?

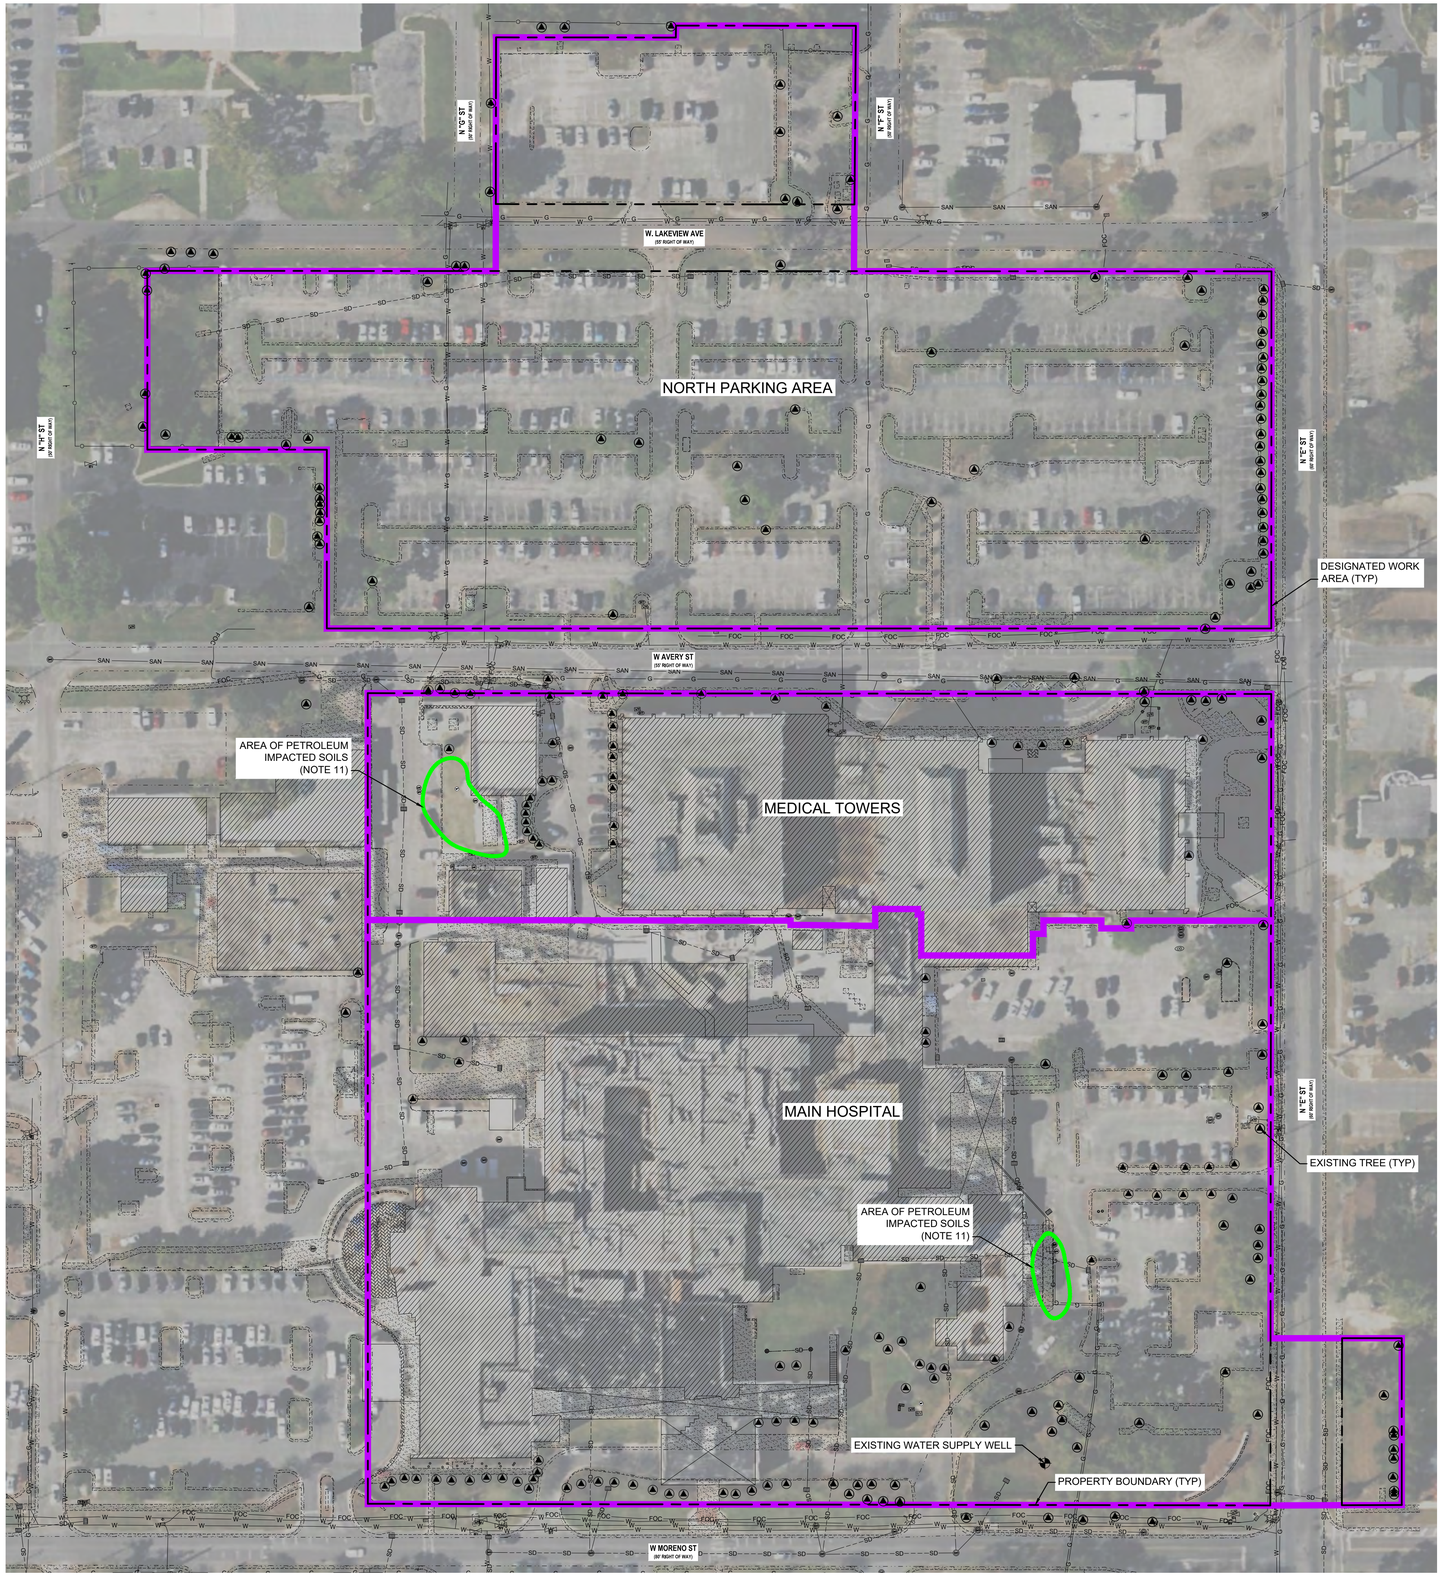
A. The SWPPP shall depict proposed phases for demolition activities and the best management practices (BMPs) and erosion and sediment controls (ESCs) to be implemented during each phase.

48. Does the City accept the FL Department's Generic Permit for Stormwater Discharge from Large and Small Construction Activities SWPPP Template, or a different Template? If there is a different template, can you provide it?

A. Yes. In addition, the contractor shall provide to the Department of Public Works their proposed dewatering method and NDPES permit prior to commencing any pumping operations. Turbidity readings will be collected by Public Works immediately upon initiating dewatering operations to verify NPDES compliance.

49. There was a large bird nest observed on an antenna possibly Osprey nest. Will this affect demolition? Are there any restrictions for nesting that would be applicable? If so, can you provide?

A. The nest will be removed by the owner prior to the start of demolition. Nest removal is not in the scope of this project.



N

LEGEND

- PROPERTY BOUNDARY
- DESIGNATED WORK AREA
- EXISTING EDGE OF ASPHALT
- EXISTING EDGE OF CONCRETE
- EXISTING FENCE
- EXISTING FIBER OPTIC LINE
- EXISTING GAS LINE
- EXISTING SANITARY SEWER LINE
- EXISTING STORM DRAIN LINE
- EXISTING WATER LINE
- EXISTING CONCRETE

GENERAL NOTES:

1. BASEMAP INFORMATION INCLUDING PROPERTY BOUNDARIES AND EXISTING STRUCTURES WAS OBTAINED FROM ALTA/NSPS LAND TITLE SURVEYS PREPARED BY BASKERVILLE-DONOVAN, INC. DATED 4 DECEMBER 2024.
2. TREE INFORMATION WAS OBTAINED FROM TREE INVENTORY PREPARED BY ARBOR-OPS, LLC DATED 19 DECEMBER 2024.
3. ALL SITE WORK, MATERIALS, AND CONSTRUCTION METHODS WILL BE IN ACCORDANCE WITH THE CITY OF PENSACOLA'S STANDARD SPECIFICATIONS (CURRENT EDITION), UNLESS OTHERWISE NOTED IN THE BID DOCUMENTS. FOR ANY WORK OPERATIONS NOT SPECIFICALLY COVERED IN THE CITY OF PENSACOLA'S STANDARD SPECIFICATIONS, WORK WILL BE IN ACCORDANCE WITH THE FLORIDA DEPARTMENT OF TRANSPORTATION'S (FDOT) STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION (CURRENT EDITION).
4. CONTRACTOR WILL PATCH OR RECONSTRUCT ALL ROADS DAMAGED DURING DEMOLITION ACTIVITIES AS DIRECTED BY THE CITY ENGINEER.
5. CONTRACTOR WILL BE RESPONSIBLE FOR OBTAINING AND COMPLYING WITH ALL NECESSARY PERMITS.
6. CONTRACTOR WILL COMPLY WITH ALL LOCAL, STATE, AND FEDERAL REQUIREMENTS.
7. CONTRACTOR WILL VISIT THE SITE AND FAMILIARIZE THEMSELVES WITH THE PROJECT PRIOR TO BIDDING AND/OR DEMOLITION ACTIVITIES.
8. EXISTING DRAINAGE FEATURES WITHIN DEMOLITION LIMITS WILL REMAIN AND WILL BE PROTECTED UNLESS OTHERWISE NOTED.
9. EXISTING STREETS AND DRIVES WILL BE MAINTAINED TO LOCAL TRAFFIC AND PROPERTY OWNERS. CONTRACTOR WILL PREPARE A TRAFFIC CONTROL PLAN FOR APPROVAL.
10. ALL WORK WILL BE CONFINED TO WITHIN THE CITY OF PENSACOLA RIGHT-OF-WAY OR PROPERTY LINES.
11. APPROXIMATE EXTENT OF PETROLEUM IMPACTED SOILS WILL BE SURFACE DELINEATED IN THE FIELD BY CITY AT TIME OF DEMOLITION WORK.

EXHIBIT C

INSURANCE

GENERAL

Before starting and until termination of work for, or on behalf of the **City**, the Contractor shall procure and maintain insurance of the types and limits specified.

The term City, as is used in this section, is defined to mean the City of Pensacola, itself, any subsidiaries or affiliates, elected and appointed officials, employees, volunteers, representatives and agents.

COVERAGE

Insurance shall be used by an insurer whose business reputation, financial stability and claims payment reputation is satisfactory to the City, for the City's protection only. Unless otherwise agreed, the amounts, form and type of insurance shall conform to the following minimum requirements.

Worker's Compensation

The Contractor shall purchase and maintain Worker's Compensation Insurance Coverage for all Workers' Compensation as legally required. Additionally, the policy, or separately obtained policy, must include Employers Liability Coverage of at least $1,000,000 each person – accident, $1,000,000 each person – disease, $1,000,000 aggregate – disease.

Commercial General, Automobile, Contractor's Pollution Liability and Umbrella Liability Coverages

The Contractor shall purchase coverage on forms no more restrictive than the latest editions of the Commercial General Liability, Business Auto, and Contractor's Pollution Liability policies filed by the Insurance Services Office. **The City of Pensacola shall be an Additional Insured** and such coverage shall be at least as broad as that provided to the Named Insured under the policy for the terms and conditions of this Contract. The City shall not be considered liable for premium payment, entitled to any premium return or dividend and shall not be considered a member of any mutual or reciprocal company. **Unless specifically specified below, minimum limits of $10,000,000 per occurrence, and per accident, combined single limit for liability must be provided,** with umbrella insurance coverage making up any difference between the policy limits of underlying policies coverage and the total amount of coverage required. If the required limits of liability afforded should become impaired by reason of any claim, then the Contractor agrees to have such limits of $10,000,000 per occurrence, reinstated under the policy.

Commercial General Liability coverage must be provided, including bodily injury and property damage liability for premises, operations, products and completed operations, independent contractors, and property damage resulting from, explosion, collapse, or underground (x, c, u) exposures.

Business Auto Policy coverage must be provided, including bodily injury and property damage arising out of operation, maintenance or use of owned, non-owned and hired automobiles and employee non-ownership use. **Minimum limits of $1,000,000 combined single limit will be acceptable for this line of coverage.**

Contractor's Pollution Liability coverage for bodily injury, property damage, fines, penalties, defense, and clean up must be included. Coverage must include both sudden/accidental and non-sudden/gradual. Hazardous materials such as asbestos, lead, mold, fungi, mercury, polychlorinated biphenyls (PCBs), chlorofluorocarbons (CFCs), radioactive, and heavy metals must be included.

Umbrella Liability Insurance coverage shall not be more restrictive than the underlying insurance policy coverages.

CERTIFICATES OF INSURANCE

Required insurance shall be documented in the Certificates of Insurance which provide that the City shall be notified at least thirty (30) days in advance of cancellation, non-renewal or adverse change or restriction in coverage. **The City shall be named as an Additional Insured** and this contract shall be listed. If required by the City, the Contractor shall furnish copies of the Contractor's insurance policies, forms, endorsements, jackets and other items forming a part of, or relating to such policies. Certificates shall be on the "Certificate of Insurance" form equal to, as determined by the City, an ACCORD 25. **Any wording in a Certificate which would make notification of cancellation, adverse change or restriction in coverage to the City an option shall be deleted or crossed out by the insurance carrier or the insurance carrier's agent or employee.** If on an ACCORD 25 or similar form, the words "endeavor to" and "but failure…" shall be deleted so that the sentence ends with the word "left" or signed endorsements for the cancellation clauses MUST accompany Certificate(s) of Insurance. The Contractor shall replace any canceled, adversely changed, restricted or non-renewed policies with the new policies acceptable to the City and shall file with the City, Certificate of Insurance under the new policies prior to the effective date of such cancellation, adverse change or restriction. If any policy is not timely

replaced, in a manner acceptable to the City, the Contractor shall, upon instructions of the City, cease all operations under the Contract until directed by the City in writing, to resume operations.

INSURANCE OF THE CONTRACTOR PRIMARY

The Contractor required coverage shall be considered primary, and all other insurance shall be considered as excess, over and above the Contractor's coverage. The Contractor policies of coverage will be considered primary as relates to all provisions of the contract.

EXHIBIT E

PUBLIC RECORDS: Contractor shall comply with Chapter 119, Florida Statutes. Specifically, Contractor shall:

A. Keep and maintain public records required by the City to perform the service.

B. Upon request from the City's custodian of public records, provide the City with a copy of the requested records or allow the records to be inspected or copied within a reasonable time at a cost that does not exceed the cost provided in Chapter 119, Florida Statutes, or as otherwise provided by law.

C. Ensure that public records that are exempt or confidential and exempt from public records disclosure requirements are not disclosed except as authorized by law for the duration of the Contract term and following the completion of the Contract if Contractor does not transfer the records to the City.

D. Upon completion of the Contract, transfer, at no cost, to the City, all public records in possession of Contractor or keep and maintain public records required by the City to perform the service. If Contractor transfers all public records to the City upon completion of the Contract, Contractor shall destroy any duplicate public records that are exempt or confidential and exempt from public records disclosure requirements. If Contractor keeps and maintains public records upon completion of the Contract, Contractor shall meet all applicable requirements for retaining public records. All records stored electronically must be provided to the City, upon request of the City's custodian of public records, in a format that is compatible with the information technology systems of the City.

Failure by Contractor to comply with Chapter 119, Florida Statutes, shall be grounds for immediate unilateral cancellation of this Contract by the City.

IF CONTRACTOR HAS QUESTIONS REGARDING THE APPLICATION OF CHAPTER 119, FLORIDA STATUTES, TO THE CONTRACTOR'S DUTY TO PROVIDE PUBLIC RECORDS RELATING TO THIS CONTRACT, CONTACT THE PUBLIC RECORDS COORDINATOR AT:

THE OFFICE OF THE CITY CLERK, (850) 435-1715

Revised 1/12/2021

DRAFT

File #: 25-1449 Community Redevelopment Agency 11/10/2025

ACTION ITEM

SPONSOR: Teniadé Broughton - Chairperson

SUBJECT:

AWARD OF CONTRACT - RFQ NO 25-39 - OWNER'S REPRESENTATIVE FOR DECOMISSIONING AND DEMOLITION OF THE FORMER BAPTIST HOSPITAL COMPLEX

RECOMMENDATION:

That the Community Redevelopment Agency (CRA) recommend that City Council award a contract for RFQ No. 25-39, Owner's Representative for Decommissioning and Demolition of Former Baptist Hospital Complex to Jacobs Project Management Company in the amount of $956,351.35. Further, that the CRA authorize the Mayor to take the actions necessary to execute and administer this contract and complete the work, consistent with the contracting documents and the Mayor’s Executive Powers as granted in the City Charter.

SUMMARY:

This action will advance City of Pensacola Strategic Plan Goal #1: Attainable Housing for All Income Levels, Goal #4: Resilient Waterfronts & Neighborhoods, Goal #5: More Walkable, Mixed-Use Districts, Goal #6: Public Spaces that Connect Communities, Goal #7: Thriving Innovation & Businesses, and Goal #8: Neighborhoods that Celebrate Culture and Honor Legacy.

The City issued a Request for Qualifications (RFQ) for owners representative services for decommissioning and demolition of the former Baptist Hospital complex on July 21, 2024. A selection committee was formed to review the written RFQ responses, short list firms, receive oral presentations, rank the firms, and provide a recommendation for award of contract to the top ranked firm. The committee comprised City employees Erica Grancagnolo, Victoria D'Angelo, Robert Slayton and Vijay Godishela.

The committee short listed and ranked the firms and designated Jacobs Project Management Company the top ranked and most qualified firm responding to the RFQ.

PRIOR ACTION:

October 21, 2024 - City Council accepted Grant Agreement No. WL095 with the Florida Department of Commerce and adopted Supplemental Budget Resolution No. 2024-84 appropriating the grant proceeds.

October 23, 2025 - City Council adopted Supplemental Budget Resolution No. 2025-72 appropriating the Baptist Donation proceeds.

FUNDING:

Budget:	$ 1,171,400.00	2017 Westside Bond Fund - Baptist Redevelopment
	7,000,000.00	Special Grants Fund - State Appropriations Grant
	5,854,797.00	Special Grants Fund - Donation Proceeds
	150,000.00	2017 Westside Bond Fund - Cervantes/Pace CDBG
	100,388.00	2017 Westside Bond Fund - Baptist CDBG
	103,735.00	2017 Westside Bond Fund - Westside Infrastructure
	185,000.00	Westside TIF Fund - Acquisition and Redevelopment (FY2025)
	300,000.00	Westside TIF Fund - Acquisition and Redevelopment - Cervantes/Pace CDBG (FY2026)
	$14,865,320.00	TOTAL

Actual:	$ 532,167.80	Due Diligence (est.)
	12,776,800.00	Demolition and Decommissioning
	956,351.35	Owner Representative Services - Demo and Decommissioning
	300,000.00	Carrying Costs - (est. 6 months)
	300,000.00	Redevelopment Advisor - Starting budget
	$14,865,319.15	TOTAL

FINANCIAL IMPACT:

Within the CRA Series 2017 Project Fund, a balance of $654,232 remained within the Baptist Redevelopment Project Account. Upon adoption of the supplemental budget resolution, a similar item will be presented to City Council requesting the carry forward and reallocation of Fiscal Year 2025 funding within the 2017 Westside Bond Fund, in the amount of $1,008,355 for the balance remaining in the Baptist Redevelopment project as well as from Baptist CDBG, Cervantes/Pace CDBG, and Westside Infrastructure, as well as within the Westside TIF Fund in the amount of $185,000 from FY 25 Acquisition and Redevelopment and $300,000 from the FY 26 Acquisition & Redevelopment for Cervantes/Pace CDBG. City Council will also be requested to carry forward the grant proceeds from the Florida Department of Commerce. The donation proceeds from Baptist Hospital were previously appropriated in October 2025.

CITY OF PENSACOLA
REQUEST FOR QUALIFICATIONS
RFQ NO.: 24-039

OWNER'S REPRESENTATIVE
FOR DECOMMISSIONING AND DEMOLITION
OF THE FORMER BAPTIST HOSPITAL COMPLEX

The City of Pensacola is requesting sealed statements of interest and qualifications from professional owner's representative and project management firms experienced in the Decommissioning and Demolition (D&D) of a large-scale development.

Sealed and complete hardcopy statements of interest and qualifications **with original or electronic signature and three (3) additional copies, plus one (1) complete and identical electronic copy (SINGLE PDF) on flash drive or CD**, must be received no later than, **August 21, 2025, 2:30 P.M.**, Central time, at the following location.

City Hall (lobby)
222 West Main Street
Pensacola, Florida, 32502
Attention: Purchasing

The OUTER FACE of the sealed submittal package shall **identify the respondent, the RFQ title, and the RFQ number** (whether hand-delivered, mailed, or via UPS/FedEx or other courier service). Submittals received after the closing time will not be accepted. Multiple submittals from the same entity will not be accepted. After the submittal deadline those submittals received will be opened and publicly acknowledged. Interested parties may attend.

Alternatively, electronic responses may be submitted to Demandstar or Central Bidding. Both sites require registration and varying fees for notifications and document downloads.

NOTE: If submitting an electronic response and a bid/proposal bond is required:

- An insurance company's executed bond **may be included with the electronic submittal**.
- A certified check/cashier's check **must be delivered** to the address above.

Those submittals received will be opened and publicly read the **following business day** *(August 22, 2025, 10:00 A.M., Central time)* via Microsoft Teams at the following link*: Microsoft Teams RFP Opening.

Specifications will be posted to the City's website at www.cityofpensacola.com/bids.aspx. **Addenda will be posted to the City's website. Respondents are responsible for obtaining addenda and are advised to check the website frequently.**

A tabulation of qualifications and/or a Notice of Intent to Award will be posted to the City's website at www.cityofpensacola.com/bids.aspx. Respondents are advised to check the website frequently.

Any questions concerning the RFQ should be addressed and submitted in writing **no later than** August 11, 2025, at 10:00 A.M., Central time, to:

Dedria Lunderman, Purchasing Manager
City Hall 6th Floor
222 West Main Street
Pensacola, Florida 32502
purchasing@cityofpensacola.com

The City of Pensacola adheres to the Americans with Disabilities Act and will make reasonable accommodations for access to City services, programs, and activities. Please email ADACoordinator@cityofpensacola.com or call (850) 436-5600. Requests must be made at least 48 hours in advance of the event in order to allow the City time to provide the requested services.

The City reserves the right to accept or reject any or all submittals, to waive any submittal informalities and to re-advertise for submittals when deemed in the best interest of the City.

Attachment	Description
A	Project Area/Drawings
B	Main FBHC Demolition and Decommissioning Scope of Work
C	Florida Commerce Grant Agreement

I. GENERAL INSTRUCTIONS

A. Firms responding to the RFQ must be available for formal presentations/interviews to the Selection Committee. These will be held in person at City Hall, 222 West Main Street, Pensacola, FL 32502.

B. Submittals should respond to each item noted in the Submittal Format and Evaluation Criteria in the order noted. Identify responses with the same paragraph notation as this RFQ.

C. Submittals must be typed or printed. All corrections made by the respondent prior to the opening must be initialed and dated by the respondent. No changes or corrections will be allowed after submittals are opened.

D. **Any addendum issued will be made available on the City's website at http://www.cityofpensacola.com/bids.aspx. Interested bidders are advised to check the site frequently.**

E. The City of Pensacola is not liable for any costs incurred by any interested party in responding to this RFQ.

II. SCOPE OF WORK

The City of Pensacola (City, or the "City") is soliciting proposals from qualified engineering firms to manage and oversee, on behalf of the City, the decommissioning and demolition of the Main Former Baptist Hospital Complex (Main FBHC). The Main FBHC is located at 1000 W Moreno Street, Pensacola, Florida 32501. **The Main FBHC Site is shown on Drawing FHBC-001 (included in Attachment A**) and is herein referred to as the "Site". The main hospital building is located at 1000 West Moreno Street, Pensacola, Florida 32501. The main hospital building and north towers were vacated in 2023. The FBHC is believed to have been developed as Baptist Hospital in the 1950's.

General descriptions of the Main FBHC to be demolished pursuant to this contract are described below:

- **Main hospital building**: The main hospital building opened in 1951 and is in the central portion of the property, bounded by North E Street to the East and West Moreno Street to the south. The main hospital building is approximately 178,000 square feet area with five floors. Floor 1 is the most extensive floor of the building, which contains multiple areas including the registration area, cafeteria, emergency room, boiler room, laundry, shipping/receiving area, facilities, etc. Floors 2 through 5 were mostly utilized for different hospital units, offices, nursing stations, and patient rooms. The rooftop of floor 4 has a helicopter pad, with a fire suppression system. Ground mounted transformers are located near the northeastern corner of the main hospital building and east or the emergency room. Two (2) diesel fuel aboveground storage tanks (ASTs) were formerly located north of the power generation plant and one (1) aviation fuel AST was formerly located southeast of the emergency room. Multiple groundwater monitoring wells are present within this vicinity.

- **Medical Towers**: The north towers (i.e. Medical Towers) are medical offices located north of the main hospital building. There are three (3) buildings, which are connected on by a shared first floor and hallway. These towers are also connected to the Main Hospital Building. The towers have five floors each and were mainly used for offices and health clinics. There is also a pharmacy, laboratory, and radiology center on the first floor. Ground mounted transformers are located near the southeast corner of the northeast tower.

- **North Parking**: Paved parking areas are present in the northern portion of the site and are available as Contractor laydown and stockpile areas. Many subsurface utilities are present within the roads and right of ways.

The City has issued a solicitation for a Decommissioning and Demolition (D&D) contractor to perform the scope of services required for the **decommissioning and demolition of the Main FBHC under RFQ No. 25-008 (included in Attachment B), "the Project".**

The owner's representative will be responsible for comprehensive advocacy and project management on behalf of the City, including but not limited to, contract administration, project management and construction oversight, conflict resolution, communication, coordination and quality control associated with the D&D contract to mitigate risks and achieve a smooth project closeout. Responding firms are expected to fully familiarize themselves with the scope of services to be performed by the D&D contractor under RFQ No. 25-008 and the conditions of the Site in their response to this solicitation.

The selected firm must demonstrate specialization in both owner's representation and construction management for projects of similar size, scope and complexity as the Project. The firm must possess a proven track record of mitigating client risk (especially public sector clients) and seeing projects to completion on schedule and on budget. Specific duties include, but are not limited to:

Contract Administration

- Monitoring compliance with contractual requirements for schedules, reports, submittals and other requirements
- Review contractor submittals for compliance
- Review of percent complete and quantities claimed on monthly invoices
- Support on change order mitigation and resolution
- Participating as client representative on daily and weekly site meetings
- Preparation of daily reports
- Providing daily summaries of work performed, load counts, and capturing copies of each waste manifest or bills of lading for scrap metal. verification that waste is being shipped to proper facilities.
- Review of close out reports and waste documentation
- Participate in and coordinate biweekly progress meetings with City representatives to review work performed, discuss upcoming activities and confirm project scheduling.

Safety

- Identification of safety hazards, verification that proper PPE and safe demolition techniques are being utilized
- Monitor that fire code requirements are being maintained and fire hydrants around site
- Participates in safety walks, safety inspections, and safety meetings
- Helps ensure that site is appropriately secured
- Helps ensure that stockpiles are covered and dust control is in place
- Ensure noise monitoring is being carried out
- Helps proactively observe and resolve local community issues are managed (loose trash, blowing dust, worker parking)

- Ensure that existing monitoring wells are protected.
- Verification that truck drivers are utilizing approved routes and that trucks and drivers have required licenses.

Demolition

- Help confirm refrigerants from HVAC or other equipment is captured properly
- Confirm that utility lines are disconnected. Making sure pipes are drained properly and liquid, including fire suppressants, boiler water, aviation fuel is captured and not released to the environment.
- Oversight that asbestos containing material is mitigated, segregated, bagged, labeled and shipped to the proper disposal facility.
- Confirm that specialized wastes, such as hazardous wastes or universal wastes are managed and disposed of properly.
- Stormwater protection equipment is installed, monitored, and maintained.
- Verification that proper trees are being protected.
- Verification that nothing is being tracked offsite
- Monitor that waste is not diverted to any unapproved locations or uses.

All work shall be performed in accordance with **Florida Commerce Grant Agreement No. WL095 (Attachment C).** The selected firm shall ensure conformance with the grant requirements in all work performed.

III. SUBMITTAL FORMAT

Submittals shall be in the format described below. The selection criteria and points that will be used in ranking the submittals are noted in each section (Section C). Qualifications shall be bound with spiral or similar binding that ensures the integrity of the submission. Each section in the submittal should follow the format/organization noted in this section (Sections A. – C.). Three to five firms may be short-listed based on the information provided on the forms and in the additional sections and those firms invited to an in-person interview. The City reserves the right to select directly from the Statements of Qualifications.

An Authorized Representative of the firm shall sign submittals. All information requested must be submitted. Failure to submit all information may result in a lowered evaluation score of the submittal. At its discretion, the City may waive minor discrepancies or reject submittals substantially incomplete or lacking key information.

A. Introduction

This section will contain a cover letter no longer than two (2) pages, signed by an authorized representative of the offering firm. A table of contents will follow the cover letter. This section should also include those required City forms within the RFQ, and any addenda issued.

1) Signature Sheet

2) State of Florida Affidavit Regarding the Use of Coercion for Labor and Services Pursuant to Florida Statute 787.06(13)
3) 52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters
4) 52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment
5) Minority/Small/Women Business Enterprise Participation Form
6) Drugfree Workplace Certificate
7) Acknowledgement of addenda (each addendum's signature page)

B. Firm Information

Briefly describe the firm's organization and philosophy. Address each of the following items:

1) Business Structure (Corporation, Joint Venture, Partnership); proper incorporation by the Secretary of State and current Florida Professional Registration Certificate for general contractor certification.

2) Number of years in business.

3) Total staff and firm's experience profile. This criterion identifies the relative size of the firm, including management, technical, and support staff. Technical staff shall be those persons proposed to be associated with the implementation of this project, project managers, engineers, supervisors, estimators, quality control manager, etc. Please describe all the relevant experience that the proposed team has been directly involved with.

4) Distance from the Site – Simply, the location in miles of the proposed operating office to the project site is to be listed.

5) Describe and explain any litigation, major disputes, contract defaults, and liens in the last 10 years.

C. EVALUATION CRITERIA

Firm Experience with D&D Projects (25 points)
Major consideration will be given to the successful completion of previous projects comparable in nature, scope, and complexity with this project, specifically as it applies contract administration, project management, construction management, conflict resolution, communication, coordination, grant administration and quality control to for public D&D projects.

List the projects which best illustrate the experience of the firm and current staff to be assigned to this project. (List no more than 10 projects, and no projects which were completed more than 10 years ago.) In determining the level of comparability

between projects, the City will consider the nature of the previous contractual relationships. Please include previous work for the City of Pensacola.

Describe the percentage of overall costs that have been saved by deductive contractor suggested/recommended changes, and/or the total amount of project schedule reductions due to contractor suggested/recommended efficiencies.

- Name and location of the project
- Nature of the firm's responsibility on this project
- Project owner's representative's name, address and phone number
- Project Client agency's representative's name, address, and phone number (current information)
- Date project was completed or is anticipated to be completed
- Size of project (gross SF of construction)
- Cost of project (construction cost)
- Work for which the staff was responsible
- If the project is not complete, present status of this project
- Project Manager and other key professionals involved on listed project and who of that staff that would be assigned to this project.

Describe the experience and qualifications of the project team. Specifically identify projects where team members have worked together. Include specifically the following:

- Staff Resumes: Submit a resume for each of the proposed key staff to be assigned to this project.
- Third-party Support: Identify any independent, third-party support to be provided in support of this project.
- Subcontracting: Provide any proposed subcontractors and vendors with their expected roles in the project.

Project Approach (25 points)

The firm should describe their views of the firm's role in the delivery method and their relationship with the City specifically as it relates to public D&D projects in the following areas: hazardous materials mitigation, safety, contract administration, project management, construction management, conflict resolution, communication, coordination, grant administration and quality control.

Experience with Mitigation of Hazardous Materials (15 points)

The firm should describe their experience in hazardous materials mitigation as an indication of their ability to deliver quality oversight.

Knowledge of the Site and Local Conditions (10 points)

The firm should describe their knowledge of the Site and surrounding community, local codes and ordinances, experience in dealing with regulatory and permitting agencies, and subcontractors as an indication of their ability to deliver quality oversight in an effective and timely manner.

Scheduling, Cost and Quality Control (15 points)
The firm's scheduling system and cost control system should be described, including the approach proposed to regulate scope adjustment and maintain quality control.

Certification as or partnership with an MBE/SBE/WBE (5 points).
Indicate whether or not the firm is itself or is partnered with any Minority/Small/Woman-Owned Business Enterprises as certified by the City of Pensacola.

Quality of Submittal (5 points).
The quality, readability, and conciseness of the Statement of Qualifications will be scored based on the reviewer's subjective assessment.

INTERVIEW PROCESS

Firms will be evaluated for short-listing based upon the written material submitted to the City in response to this RFQ. The evaluation committee will review the submittals, and the City will schedule formal presentations/interviews for those three to five (3-5) firms short-listed. Firms selected for presentations/interviews will be required to have the proposed project manager present to participate in the presentation/interview. Presentations/interviews will be conducted in-person only.

Each firm will be allowed up to 40 minutes for a formal presentation, consisting of a reiteration of the written qualification demonstrating the firm's grasp of the project. The formal presentation will followed by 20 minutes of Questions & Answers (Q&A). Any unused formal presentation time will be added to the Q&A period. A projection system is available, but presenters are requested to bring their own laptop and flash drives containing the complete presentation and any handouts. The selection committee would prefer a PowerPoint presentation. The presentations are closed to the public. The committee deliberations following the last presentation will be open to the public.

The evaluation committee will make a recommendation to the Mayor regarding the selection of the firms based upon the formal presentations/interviews. The Mayor will then forward his recommendation for award to the City Council for their approval.

V. GENERAL TERMS AND CONDITIONS

A. No Contingency Fees

By responding to this solicitation, each Respondent warrants that it has not and will not employ or retain any company or person, other than a bona fide employee working solely for the firm, to solicit or secure an agreement pursuant to this solicitation and that it has not and will not pay or agree to pay any person,

company, corporation, individual or firm, other than a bona fide employee working solely for the firm, any fee, commission, percentage, gift, or other consideration contingent upon or resulting from the award or making of an agreement.

B. Insurance and Indemnification

Before starting and until termination of work for, or on behalf of, the CITY, the CONSULTANT and any/all sub consultants shall procure and maintain insurance of the types and to the limits specified.

The term CITY as used in this section of the Contract is defined to mean the CITY of Pensacola itself, any subsidiaries or affiliates, elected and appointed officials, employees, volunteers, representatives and agents.

Insurance shall be issued by an insurer whose business reputation, financial stability and claims payment reputation is satisfactory to the CITY for the CITY's protection only. Unless otherwise agreed, the amounts, form and type of insurance shall conform to the following minimum requirements, Consultant understands and agrees that increased limits and/or additional types of insurance may be required depending on the scope of service.

1. WORKERS' COMPENSATION
   The CONSULTANT shall purchase and maintain Worker's Compensation Insurance Coverage for all Workers' Compensation obligations as legally required. Additionally, the policy, or separately obtained policy, must include Employers Liability Coverage of at least $100,000 each person -accident, $100,000 each person - disease, $500,000 aggregate - disease. The policy must include coverage for United States Longshore & Harbor Act (USL&H).

2. COMMERCIAL GENERAL, AUTOMOBILE, PROFESSIONAL LIABILITY AND UMBRELLA LIABILITY COVERAGES
   The CONSULTANT shall purchase coverage on forms no more restrictive than the latest editions of the Commercial General Liability and Business Auto policies filed by the Insurance Services Office. The CITY shall be an Additional Insured for Commercial General Liability and umbrella liability and such coverage shall be at least as broad as that provided to the Named Insured under the policy for the terms and conditions of this Contract. The CITY shall not be considered liable for premium payment, entitled to any premium return or dividend and shall not be considered a member of any mutual or reciprocal company. Minimum limits as outlined below must be provided, with umbrella insurance coverage making up any difference between the policy limits of underlying policies coverage and the total amount of coverage required.

   Commercial General Liability coverage must be provided, including bodily injury and property damage liability for premises, operations, products and completed operations, contractual liability and independent contractors.

The coverage shall be written on occurrence-type basis. Minimum limits of $1,000,000 per occurrence and in the aggregate must be provided. The City of Pensacola must be listed as an additional insured.

Business Auto Policy coverage must be provided, including bodily injury and property damage arising out of operation, maintenance or use of owned, non-owned and hired automobiles. Minimum limits of $1,000,000 CSL must be provided

Professional Liability insurance coverage must be provided to afford protection for errors and omissions arising out of services provided under, or associated with this contract. Minimum limits of $5,000,000 per occurrence and $5,000,000 aggregate must be provided.

Umbrella Liability Insurance coverage shall not be more restrictive than the underlying insurance policy coverages. The coverage shall be written on an occurrence-type basis and the City listed as an additional insured.

CERTIFICATES OF INSURANCE

Required insurance shall be documented in the Certificates of Insurance that lists this Contract and provides that the CITY shall be notified at least thirty (30) days in advance of cancellation, nonrenewal or adverse change or restriction in coverage. If required by the CITY, the CONSULTANT shall furnish copies of the CONSULTANT's insurance policies, forms, endorsements, jackets and other items forming a part of, or relating to such policies. Certificates shall be on the "Certificate of Insurance" form equal to, as determined by the CITY an ACORD 25. Any wording in a Certificate which would make notification of cancellation, adverse change or restriction in coverage to the CITY an option shall be deleted or crossed out by the insurance carrier or the insurance carrier's agent or employee. The CONSULTANT shall replace any canceled, adversely changed, restricted or non-renewed policies with new policies acceptable to the CITY and shall file with the CITY Certificates of Insurance under the new policies prior to the effective date of such cancellation, adverse change or restriction. If any policy is not timely replaced, in a manner acceptable to the CITY, the CONSULTANT shall, upon instructions of the CITY, cease all operations under the Contract until directed by the CITY, in writing, to resume operations.

INSURANCE OF THE CONSULTANT PRIMARY

The CONSULTANT's required coverage shall be considered primary, and all other insurance shall be considered as excess, over and above the CONSULTANT's coverage. The CONSULTANT's policies of coverage will be considered primary as relates to all provisions of the Contract.

LOSS CONTROL AND SAFETY

The CONSULTANT shall retain control over its employees, agents, servants and subcontractors, as well as control over its invitees, and its activities on and about

the subject premises and the manner in which such activities shall be undertaken and to that end, the CONSULTANT shall not be deemed to be an agent of the CITY. Precaution shall be exercised at all times by the Consultant for the protection of all persons, including employees, and property from harm caused by negligent acts or omissions of the consultant.

HOLD HARMLESS

The Consultant shall indemnify and hold harmless the City of Pensacola, its officers and employees, from any and all liabilities, damages, losses, and costs to the extent caused by the negligence, recklessness or intentional wrongful misconduct of the Consultant and persons employed or utilized by the Consultant in the performance of the contract. The Consultant's obligation shall not be limited by, or in any way to, any insurance coverage or by any provision in or exclusion or omission from any policy of insurance.

PAY ON BEHALF OF THE CITY

The CONSULTANT agrees to pay on behalf of the CITY, as well as provide a legal defense for the CITY, both of which will be done only if and when requested by the CITY, for all claims as described in the Hold Harmless paragraph. Such payment on the behalf of the CITY shall be in addition to any and all other legal remedies available to the CITY and shall not be considered to be the CITY's exclusive remedy.

REQUEST FOR QUALIFICATIONS
CONTRACTUAL SERVICES
GENERAL CONDITIONS

To ensure acceptance, all respondents submitting qualifications to the City of Pensacola shall be governed by the following conditions, attached specifications, and qualification form(s) unless otherwise specified. Qualifications not submitted on the qualification form(s) provided shall be rejected, and qualifications not complying with these conditions will be subject to rejection. **Multiple submittals from the same entity will not be accepted.**

1. **Alternate Solutions:** During the drafting of written specifications, a sincere effort is made to describe services best suited to the needs of the City. However, the City invites qualifications with alternate solutions to the performance objectives set forth in the specifications, unless a particular specification is expressly identified as mandatory.

2. **Award Determination to be Based on Best Interest of City:** There is no obligation on the part of the City to award a contract to any respondent and the City reserves the right to award a contract to or negotiate a contract with a responsible respondent submitting the most responsive or best alternative qualification for a resulting contract which is most advantageous to and in the best interest of the City. The City shall be the sole judge of the qualification and the resulting contract, and its decision shall be final.

3. **Bond (RFQ): None.**

4. **E-Verify System (Mandatory):** In compliance with the provisions of F.S. 448.095, the parties to this contract and any subcontractors engaged in the performance of this contract hereby certify that they have registered with and shall use the E-Verify system of the United States Department of Homeland Security to verify the work authorization status of all newly hired employees, within the meaning of the statute.

5. **Exceptions to Specifications:** In order that equal consideration be given in evaluating qualifications, any exceptions to or deviations from the specifications as written must be noted and fully explained. The Mayor is the final authority in determining the acceptability of any exceptions to specifications.

6. **Intent of Specifications:** It is the intent of the specifications attached hereto to set forth and describe a certain service(s) to be purchased by the City of Pensacola including all labor, materials, equipment, machinery, tools, apparatus, and means of transportation (including freight costs) necessary to provide the service(s).

7. **Interpretations:** All questions concerning the specifications or conditions shall be directed in writing to the Purchasing Office at least ten (10) days prior to submittal deadline, unless otherwise instructed on the Request for Qualifications Page.

Inquiries must reference the proposed service and the date of the qualification submittal deadline. Interpretations will be made in the form of an addendum placed on the City's website. The City shall not be responsible for any other explanation or interpretation.

8. **Legal Requirements:** All applicable provisions of Federal, State, County, and local laws including all ordinances, rules, and regulations shall govern the development, submittal and evaluation of all qualifications received in response to these specifications, and shall govern any and all claims between person(s) submitting a qualification response hereto and the City of Pensacola, by and through its officers, employees and authorized representatives. A lack of knowledge by the respondent concerning any of the aforementioned shall not constitute a cognizable defense against the legal effect thereof. The respondent agrees that it will not discriminate on the basis of race, creed, color, national origin, sex, age or disability.

9. **Licenses, Registration and Certificates:** Each respondent shall possess at the time of submitting its submittal all licenses, registrations and certificates necessary to engage in the business of contracting (or special contracting if the work to be performed necessitates a particular type of specialty contractor) in the City of Pensacola. Respondent must also possess all licenses, registrations and certificates necessary to comply with federal, state and local laws and regulations. The awarded respondent shall be registered at the time of contract execution as an active vendor with the Florida Department of State, Division of Corporations (www.sunbiz.org).

10. **Mistakes:** Respondents are expected to examine the conditions, scope of work, qualification prices, extensions, and all instructions pertaining to the services involved. Failure to do so will be at the respondent's risk. Unit prices will govern in ward.

11. **Permits and Taxes:** The respondent shall procure all permits, pay all charges, fees, and taxes, and give all notices necessary and incidental to the due and lawful prosecution of the work.

12. **Pre-RFQ Meetings:** If an RFQ requires a mandatory pre-RFQ meeting, any representative of a firm wishing to submit a qualification must sign in with the name of the responding firm.

13. **Prohibited Conduct by Respondents:** Upon the publication of any solicitation for sealed bids, requests for proposals, requests for qualifications, or other solicitation of interest or invitation to negotiate by any authorized representative of the City of Pensacola, any party interested in submitting a bid, qualification, or other response reflecting an interest in participating in the purchasing or contracting process shall be prohibited from engaging in any communication **pertaining to formal solicitations** with any member of Pensacola City Council, the Mayor, or any member of a selection/evaluation committee for RFPs/RFQs, whether directly or

indirectly or through any representative or agent, whether in person, by mail, by facsimile, by telephone, by electronic communications device, or by any other means of communication, until such time as the City has completed all action with respect to the solicitation.

14. **Protests:** Protests of the plans, specifications, and other requirements of requests for qualifications must be received in writing by the Purchasing Office at least ten (10) business days prior to the scheduled qualification opening. A detailed explanation of the reason for the protest must be included. Protests of the intended award of submittal or contract must be in writing and received in the Purchasing Office within five (5) business days of the notice of intent to award. A detailed explanation of the protest must be included.

15. **Public Records:** Any material submitted in response to this Request for Qualification will become a public document pursuant to Florida Statute §119.07. This includes material which the responding respondent might consider to be confidential or a trade secret. Any claim of confidentiality is waived upon submission, effective after opening pursuant to Florida Statute §119.07.

16. **Public Records Law:** The Parties shall each comply with Florida Public Records laws. The Parties hereby contractually agree that each Party shall allow public access to all documents, papers, letters, or other public records as defined in Chapter 119, Florida Statutes, made or received by either Party in conjunction with this agreement, or related thereto, unless a statutory exemption from disclosure exists. Notwithstanding any provision to the contrary, it is expressly agreed that Contractor's failure to comply with this provision, within seven (7) days of notice from the City, shall constitute an immediate and material breach of contract for which the City may, in the City's sole discretion, unilaterally terminate this agreement without prejudice to any right or remedy.

17. **Qualification Withdrawals:** No qualification may be withdrawn after closing time for receipt of qualifications for a period of sixty (60) days thereafter. The contract award shall be legally binding at the time of award by City Council or Mayor.

18. **Rejection of Qualifications:** The City of Pensacola reserves the right to accept or reject any or all qualifications, to award qualifications on a split-order basis by item or service number, to waive any irregularities, technicalities, or informalities, and to re-advertise for qualifications when deemed in the best interest of the City of Pensacola.

1. **Sealed Response:** All required City forms must be submitted. All responses must be signed by an authorized representative of the proposer.
   A. Hardcopy response: In the event more than one submittal deadline is scheduled for the same date and time, do not include responses concerning different sets of specifications within the same envelope. The face of the sealed envelope shall be plainly marked identifying the responder, the bid/RFP/RFQ

title and number. It shall be the sole responsibility of the respondent to assure receipt of the submittal at the Purchasing Office prior to the published time for the submittal deadline.

B. Electronic response: Respondent may submit an electronic submittal to the sites indicated in this document. Offers by telephone, fax, or email will **NOT BE ACCEPTED**.

19. **Tax:** The City of Pensacola is exempt from all State and local sales tax.

20. **Termination for Convenience:** A contract may be terminated in whole or in part by the City at any time and for any reason in accordance with this clause whenever the City shall determine that such termination is in the best interest of the City. Any such termination shall be effected by the delivery to the contractor at least thirty (30) business days before the effective date of a Notice of Termination specifying the extent to which performance shall be terminated and the date upon which termination becomes effective. An equitable adjustment in the contract price shall be made for the completed service, but no amount shall be allowed for anticipated profit on unperformed services.

21. **Unauthorized Aliens:** The City of Pensacola shall consider the employment by any contracted vendor of unauthorized aliens a violation of Section 274A of the Immigration and Nationality Act. Such violation shall be cause for unilateral termination of this contract.

ANY AND ALL SPECIAL CONDITIONS AND SPECIFICATIONS ATTACHED HERETO WHICH VARY FROM THESE GENERAL CONDITIONS SHALL HAVE PRECEDENCE.

Section 787.06(13) Florida Statutes requires all nongovernmental entities executing, renewing, or extending a contract with a governmental entity to provide an affidavit signed by an officer or representative of the nongovernmental entity under penalty of perjury that the nongovernmental entity does not use coercion for labor or services.

The undersigned hereby certifies that he/she is an officer or authorized representative of the vendor identified above and that said vendor does not use coercion for labor or services as defined in Section 787.06 Florida Statutes.

Florida Statute 787.06
(2)(a) "Coercion" means:
1. *Using or threatening to use physical force against any person;*
2. *Restraining, isolating, or confining or threatening to restrain, isolate, or confine any person without lawful authority and against her or his will;*
3. *Using lending or other credit methods to establish a debt by any person when labor or services are pledged as a security for the debt, if the value of the labor or services as reasonably assessed is not applied toward the liquidation of the debt, the length and nature of the labor or services are not respectively limited and defined;*
4. *Destroying, concealing, removing, confiscating, withholding, or possessing any actual or purported passport, visa, or other immigration document, or any other actual or purported government identification document, of any person;*
5. *Causing or threatening to cause financial harm to any person;*
6. *Enticing or luring any person by fraud or deceit; or*
7. *Providing a controlled substance as outlined in Schedule I or Schedule II of s. 893.03 to any person for the purpose of exploitation of that person.*

(2)(e) "Labor" means work of economic or financial value.
*(2)(h) "Services" means any act committed at the behest of, under the supervision of, or for the benefit of another. The term includes, but is not limited to, forced marriage, servitude, or the removal of organs.*_____

Under penalties of perjury, I declare that I have read the foregoing document and that the facts stated in it are true.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror nonresponsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

A. The name of the subcontractor.

B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE BIDS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more bids which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a bid received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie bids will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2) Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3) Give each employee engaged in providing the commodities or contractual services under bid a copy of the statement specified in subsection (1).

4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5) Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6) Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

CONTRACT BETWEEN CITY OF PENSACOLA
AND
[xxxCONTRACTORxxx]
BASED UPON REQUEST FOR QUALIFICATIONS #_____

THIS CONTRACT ("Contract") is made this ___ day of _____, 20__, by and between the City of Pensacola ("City"), a Florida municipal corporation created and existing under the laws of the State of Florida, located at 222 W. Main Street, Pensacola, Florida 32502, and _____, ("Contractor"), a corporation authorized to do business in Florida, located at _____, (the City and Contractor collectively referred to hereinafter as the "Parties").

WITNESSETH:

WHEREAS, the City solicited a Request for Qualifications #_____, on _____, 20__ ("RFQ"), as described in Project Manual/Specifications for _____, as modified by any addendum to the ("Addenda"), all as attached hereto as Exhibit A and incorporated herein by this reference (collectively referred to hereinafter as the "RFQ"); and

WHEREAS, in response to the RFQ, the Contractor submitted to the City a statement of qualifications and experience ("SOQ") dated _____, 20__, and/or any other documents submitted in response to the RFQ, attached hereto as Exhibit B and incorporated herein by this reference; and

WHEREAS, the City has selected the Contractor pursuant to the selection criteria or process as specified in the RFQ based on the Contractor's SOQ and any other requested information, and the Parties have agreed upon negotiated fees and services ("Negotiated Terms") as attached hereto in Exhibit C and incorporated herein by this reference; and

WHEREAS, the Parties desire the Contractor to perform as described in the RFQ and the SOQ, the Negotiated Terms, and pursuant to the terms and conditions of this Contract; and

WHEREAS, the Parties desire to enter into this Contract;

NOW, THEREFORE, in consideration of the work to be performed and the payment for the performance of the work, of the mutual covenants and benefits contained herein, and for other good and valuable consideration, the Parties agree as follows:

Section 1. Recitals.
The recitals contained above are true and correct and are incorporated into this Contract.

Section 2. Contractor's Obligations.

SAMPLE

The Contractor shall perform all work and services described in, and in accordance with, the Contract. The Contractor warrants that all equipment, materials, and workmanship furnished, whether furnished by Contractor or its subcontractors or sub-suppliers, will comply with the Contract and any City specifications, drawings, and other descriptions supplied or adopted. The Contractor further warrants that the supplies and workmanship will be new, fit, and sufficient for the purpose for which they are intended, of good materials, design, and workmanship, and free from defects or failure. The City or its duly authorized representative shall at all times have full opportunity to inspect the materials to be furnished and the work to be done under this Contract. The Contractor shall comply with all applicable federal, state, and local laws, ordinances, rules, and regulations pertaining to the performance of this Contract. The Contractor is responsible for and shall indemnify the City against all damage or loss caused by fire, theft, or otherwise to materials, tools, equipment, and consumables left on City property by the Contractor.

Section 3. Term of Contract.
Subject to the right of termination for cause or convenience, the term of this Contract shall be as specified in the attached RFQ and SOQ.

Section 4. Payment.
The Contractor agrees to perform all work and services in Section 2 at the rates, costs, and any not-to-exceed amount provided for in the attached SOQ and Attachment B, Payment Schedule. The amount will be paid by the City based on invoices submitted by Contractor and payments approved by the City, only after written acceptance by the City pursuant to the Contract. Such payment shall be in accordance with the Florida Prompt Payment Act. In the event that the Consultant does not fully perform its obligations under the Contract, the City reserves the right to withhold payments for work not performed, to engage an alternative Contractor to complete work not performed, and to withhold such amounts as may be required to hold the City harmless from any claims or damages, direct, indirect or consequential, that may be sustained on account of the Contractor's acts or omissions in the performance of this Contract.

Section 5. Bond.

Is a bond required? (___) Yes (___) No

If yes: Contractor shall provide all bond(s) as required in the Contract. Should the City in the City's sole discretion at any time deem any of the sureties upon such bond to be unsatisfactory or if for any reason such bond shall cease to be adequate security for the City, the Contractor shall within five (5) days of written notice from the City furnish a new or additional bond in full sum and satisfactory to the City. No payment shall be deemed to be due or to be made to the Contractor unless and until such new or additional bond shall be furnished and approved in writing by the City. The premium and all expenses associated with such new or additional bond shall be paid by, and the sole responsibility of, the Contractor.

Section 6. Performance Schedule.
The Contractor shall commence and complete all work and services pursuant to the Contract.

SAMPLE

Section 7. Necessary Approvals.
Contractor shall procure all permits, licenses, and certificates and any approvals in performance and completion of this Contract as may be required by federal, state, and local laws, ordinances, rules, and regulations, and in accordance with the Contract.

Section 8. No Waiver.
No waiver, alterations, consent, or modification of any of the provisions of the Contract shall be binding unless in writing and signed by the Mayor or his/her designee.

Section 9. Governing Law.
This Contract is governed and construed in accordance with the laws of the State of Florida. The law of the State of Florida shall be the law applied in the resolution of any claim, actions, or proceedings arising out of this Contract.

Section 10. Venue.
Venue for any claim, actions, or proceedings arising out of this Contract shall be Escambia County, Florida.

Section 11. No Discrimination.
Contractor shall not discriminate on the basis of any class protected by federal, state, or local law in the performance of this Contract.

Section 12. Assignment.
The rights and privileges conferred by this Contract shall not be assigned or transferred without the written consent of the City, which consent shall not be unreasonably withheld.

Section 13. No Other Agreements.
The Parties agree the Contract contains all the terms and conditions agreed upon by the Parties. No other agreements, oral or otherwise, regarding the subject matter of this Contract shall be deemed to exist or to bind either Party.

Section 14. Remedies for Failure to Perform or Breach of Contract.
The City reserves the right to seek all remedies available under law in the event of a failure to perform or other breach of this Contract by the Contractor, and the failure of the City to employ a particular remedy shall not be regarded by the Parties as a waiver of that or any other available remedy.

Section 15. Termination for Convenience.
The City may terminate this Contract without cause upon thirty (30) days prior written notice.

Section 16. Public Records Act.
The parties acknowledge and agree to fulfill all obligations respecting required contract provisions in any contract entered into or amended after July 1, 2016, in full compliance pursuant to Section 119.0701, *Florida Statutes*, and obligations respecting termination of a contract for failure to provide public access to public records. The parties expressly

SAMPLE

agree specifically that the contracting parties hereto shall comply with the requirements within Attachment "A" attached hereto and incorporated by reference.

Section 17. Mandatory Use of E-Verify System.
In compliance with the provisions of F.S. 448.095, the parties to this contract and any subcontractors engaged in the performance of this contract hereby certify that they have registered with and shall use the E-Verify system of the United States Department of Homeland Security to verify the work authorization status of all newly hired employees, within the meaning of the statute.

IN WITNESS WHEREOF, the parties hereto have caused this Contract to be executed and sealed the day and year first above written.

Attachment "A"

PUBLIC RECORDS: Contractor shall comply with Chapter 119, Florida Statutes. Specifically, Contractor shall:

A. Keep and maintain public records required by the City to perform the service.

B. Upon request from the City's custodian of public records, provide the City with a copy of the requested records or allow the records to be inspected or copied within a reasonable time at a cost that does not exceed the cost provided in Chapter 119, Florida Statutes, or as otherwise provided by law.

C. Ensure that public records that are exempt or confidential and exempt from public records disclosure requirements are not disclosed except as authorized by law for the duration of the Contract term and following the completion of the Contract if Contractor does not transfer the records to the City.

D. Upon completion of the Contract, transfer, at no cost, to the City, all public records in possession of Contractor or keep and maintain public records required by the City to perform the service. If Contractor transfers all public records to the City upon completion of the Contract, Contractor shall destroy any duplicate public records that are exempt or confidential and exempt from public records disclosure requirements. If Contractor keeps and maintains public records upon completion of the Contract, Contractor shall meet all applicable requirements for retaining public records. All records stored electronically must be provided to the City, upon request of the City's custodian of public records, in a format that is compatible with the information technology systems of the City.

Failure by Contractor to comply with Chapter 119, Florida Statutes, shall be grounds for immediate unilateral cancellation of this Contract by the City.

IF CONTRACTOR HAS QUESTIONS REGARDING THE APPLICATION OF CHAPTER 119, FLORIDA STATUTES, TO THE CONTRACTOR'S DUTY TO PROVIDE PUBLIC RECORDS RELATING TO THIS CONTRACT, CONTACT THE PUBLIC RECORDS COORDINATOR AT:

MEMORANDUM

TO: Respondents to RFQ #25-039, Owner's Representative for Decommissioning and Demolition of the Former Baptist Hospital Complex

FROM: Dedria Lunderman, Purchasing Manager

DATE: October 2, 2025

SUBJ: Notice of Intent to Award

Thank you for your oral presentations to the selection committee. After considering the information received from the presentations, the committee ranked the firms as shown below.

1) Jacobs Project Management Company
2) AMI Consulting Engineers, PA
3) Artaic Group

The committee's recommendation of award to the highest-ranked firm will be forwarded to the Mayor. The Mayor's recommendation for award of contract will be presented at a future City Council meeting. This memorandum serves as the City's Notice of Intent to Award.

Within five (5) business days of the issuance of this notice, any firm that responded to the RFQ and believes that the City has incorrectly selected another respondent for award may submit a written notice of protest. Such notice of protest must be received by the City on or before 10:00 A.M. on October 9, 2025. Protests must be delivered to:

Dedria Lunderman
Purchasing Manager
City Hall, 6th floor
222 West Main Street
Pensacola, FL 32502
purchasing@cityofpensacola.com

The notice of protest must include a written statement specifying in detail each and every one of the grounds asserted for the protest. The protest must be signed by an individual

authorized to represent the bidder, and must cite the law, rule, local ordinance, procedure or RFP provision on which the protest is based. In addition, the protestor must specify facts and evidence sufficient for the City to determine the validity of the protest.

Thank you for your firm's submittal and interest in this project.

cc: Victoria D'Angelo, CRA Division Manager, City of Pensacola
Erica Grancagnolo, Economic Development and Neighborhood Services Director, City of Pensacola

CONTRACT BETWEEN CITY OF PENSACOLA AND JACOBS PROJECT MANAGEMENT COMPANY
BASED UPON REQUEST FOR QUALIFICATIONS #25-039

THIS CONTRACT ("Contract") is made this ___ day of _____, 20__, by and between the City of Pensacola ("City"), a Florida municipal corporation created and existing under the laws of the State of Florida, located at 222 W. Main Street, Pensacola, Florida 32502, and Jacobs Project Management Company, ("Consultant"), a corporation authorized to do business in Florida, located at 1999 Bryan Street, Suite 3500 Dallas, TX 75201, (the City and Consultant collectively referred to hereinafter as the "Parties").

WITNESSETH:

WHEREAS, the City solicited a Request for Qualifications #25-039, on July 21, 2025 ("RFQ"), as described in Project Manual/Specifications for Owner's Representative for Decommissioning and Demolition of the Former Baptist Hospital Complex, as modified by any addendum to the ("Addenda"), all as attached hereto as Exhibit A and incorporated herein by this reference (collectively referred to hereinafter as the "RFQ Documents"); and

WHEREAS, in response to the RFQ Documents, the Consultant submitted to the City a proposal dated August 21, 2025, including a statement of qualifications and experience, and/or any other documents submitted in response to the RFQ Documents ("RFQ Response") attached hereto as Exhibit B and incorporated herein by this reference; and

WHEREAS, the City has selected the Consultant pursuant to the selection criteria or process as specified in the RFQ Documents based on the Consultant's RFQ Response and any other requested information, and the Parties have agreed upon negotiated fees and services ("Negotiated Terms") as attached hereto in Exhibit C and incorporated herein by this reference; and

WHEREAS, the Parties desire the Consultant to perform as described in the RFQ Documents and the RFQ Response, the Negotiated Terms, and pursuant to the terms and conditions of this Contract; and

WHEREAS, the Parties desire to enter into this Contract;

NOW, THEREFORE, in consideration of the work to be performed and the payment for the performance of the work, of the mutual covenants and benefits contained herein, and for other good and valuable consideration, the Parties agree as follows:

Section 1. Recitals.
The recitals contained above are true and correct and are incorporated into this Contract.

Section 2. Consultant's Obligations.
The Consultant shall perform all work and services described in accordance with the normal degree of care and skill of other reputable Consultant providing similar services on similar projects of like size and nature at the same time and in the same locale as this project, and in accordance with, the Contract. The City or its duly authorized representative shall at all times have full opportunity to inspect the materials to be furnished and the work to be done under this Contract. The Consultant shall comply with all applicable federal, state, and local laws, ordinances, rules, and regulations pertaining to the performance of this Contract.

Section 3. Term of Contract.
Subject to the right of termination for cause or convenience, the term of this Contract shall be as specified in the attached RFQ Documents, RFQ Response, and Negotiated Terms.

Section 4. Payment.
The Consultant agrees to perform all work and services in Section 2 at the rates, costs, and any not-to-exceed amount provided for in the attached Proposal and Attachment B, Payment Schedule. The amount will be paid by the City based on invoices submitted by Consultant and payments approved by the City, only after written acceptance by the City pursuant to the Contract. Such payment shall be in accordance with the Florida Prompt Payment Act. In the event that the Consultant does not fully perform its obligations under the Contract, the City reserves the right to withhold payments for work not performed, to engage an alternative Consultant to complete work not performed, and to withhold such amounts as may be required to hold the City harmless from any claims or damages, direct, indirect or consequential, that may be sustained on account of the Consultant's acts or omissions in the performance of this Contract.

Section 5. Bond.

Is a bond required? (___) Yes (X) No

If yes: Consultant shall provide all bond(s) as required in the Contract. Should the City in the City's sole discretion at any time deem any of the sureties upon such bond to be unsatisfactory or if for any reason such bond shall cease to be adequate security for the City, the Consultant shall within five (5) days of written notice from the City furnish a new or additional bond in full sum and satisfactory to the City. No payment shall be deemed to be due or to be made to the Consultant unless and until such new or additional bond shall be furnished and approved in writing by the City. The premium and all expenses associated with such new or additional bond shall be paid by, and the sole responsibility of, the Consultant.

Section 6. Performance Schedule.

The Consultant shall commence and complete all work and services pursuant to the Contract.

Section 7. Necessary Approvals.
Consultant shall procure all permits, licenses, and certificates and any approvals in performance and completion of this Contract as may be required by federal, state, and local laws, ordinances, rules, and regulations, and in accordance with the Contract.

Section 8. No Waiver.
No waiver, alterations, consent, or modification of any of the provisions of the Contract shall be binding unless in writing and signed by the Mayor or his/her designee.

Section 9. Governing Law.
This Contract is governed and construed in accordance with the laws of the State of Florida. The law of the State of Florida shall be the law applied in the resolution of any claim, actions, or proceedings arising out of this Contract.

Section 10. Venue.
Venue for any claim, actions, or proceedings arising out of this Contract shall be Escambia County, Florida.

Section 11. No Discrimination.
Consultant shall not discriminate on the basis of any class protected by federal, state, or local law in the performance of this Contract.

Section 12. Assignment.
The rights and privileges conferred by this Contract shall not be assigned or transferred without the written consent of the City, which consent shall not be unreasonably withheld.

Section 13. No Other Agreements.
The Parties agree the Contract contains all the terms and conditions agreed upon by the Parties. No other agreements, oral or otherwise, regarding the subject matter of this Contract shall be deemed to exist or to bind either Party.

Section 14. Remedies for Failure to Perform or Breach of Contract.
The City reserves the right to seek all remedies available under law in the event of a failure to perform or other breach of this Contract by the Consultant which Consultant has been informed of by City in writing and has not cured within a reasonable amount of time, and the failure of the City to employ a particular remedy shall not be regarded by the Parties as a waiver of that or any other available remedy.

Section 15. Termination for Convenience.
The City may terminate this Contract without cause upon thirty (30) days prior written notice.

Section 16. Public Records Act.
The parties acknowledge and agree to fulfill all obligations respecting required contract provisions in any contract entered into or amended after July 1, 2016, in full compliance pursuant to Section 119.0701, *Florida Statutes*, and obligations respecting termination of a contract for failure to provide public access to public records. The parties expressly agree specifically that the contracting parties hereto shall comply with the requirements within Attachment "A" attached hereto and incorporated by reference.

Section 17. Mandatory Use of E-Verify System.
In compliance with the provisions of F.S. 448.095, the parties to this contract and any subConsultants engaged in the performance of this contract hereby certify that they have registered with and shall use the E-Verify system of the United States Department of Homeland Security to verify the work authorization status of all newly hired employees, within the meaning of the statute.

IN WITNESS WHEREOF, the parties hereto have caused this Contract to be executed and sealed the day and year first above written.

PUBLIC RECORDS: Consultant shall comply with Chapter 119, Florida Statutes. Specifically, Consultant shall:

A. Keep and maintain public records required by the City to perform the service.

B. Upon request from the City's custodian of public records, provide the City with a copy of the requested records or allow the records to be inspected or copied within a reasonable time at a cost that does not exceed the cost provided in Chapter 119, Florida Statutes, or as otherwise provided by law.

C. Ensure that public records that are exempt or confidential and exempt from public records disclosure requirements are not disclosed except as authorized by law for the duration of the Contract term and following the completion of the Contract if Consultant does not transfer the records to the City.

D. Upon completion of the Contract, transfer, at no cost, to the City, all public records in possession of Consultant or keep and maintain public records required by the City to perform the service. If Consultant transfers all public records to the City upon completion of the Contract, Consultant shall destroy any duplicate public records that are exempt or confidential and exempt from public records disclosure requirements. If Consultant keeps and maintains public records upon completion of the Contract, Consultant shall meet all applicable requirements for retaining public records. All records stored electronically must be provided to the City, upon request of the City's custodian of public records, in a format that is compatible with the information technology systems of the City.

Failure by Consultant to comply with Chapter 119, Florida Statutes, shall be grounds for immediate unilateral cancellation of this Contract by the City.

Statement of Qualifications for

City of Pensacola RFQ No. 25-039:

Owner's Representative for Decommissioning & Demolition of the Former Baptist Hospital Complex

August 21, 2025

Jacobs

Challenging today.
Reinventing tomorrow.

A. Introduction

August 21, 2025

Dedria Lunderman
City of Pensacola, Purchasing Manager
222 West Main Street, Pensacola, Florida 32502

Subject: RFQ No. 25-039, Owner's Representative for Decommissioning and Demolition of the Former Baptist Health Complex

Dear Ms. Lunderman and Members of the Selection Committee:

Jacobs Project Management Co. (Jacobs) is pleased to submit our qualifications in response to the City's RFQ for Owner's Representative Services for the former Baptist Health Complex Decommissioning and Demolition Project. We understand that this project represents more than just the demolition of an aging facility—it is a strategic investment in the local neighborhood and the greater Pensacola area, and Jacobs is uniquely positioned to help the City safely remove this facility and set up the next era of development at this site.

Our team recognizes the City's goals to fully decommission and demolish the hospital complex, and we know these activities must follow the local and state regulations. This work needs to be accomplished safely and with minimal impacts to local residents. Once the demolition is complete, this site has immense potential for redevelopment that will benefit the entire area. Our team understands the importance of this project and how it can act as a catalyst for the future of the area, and we offer the following qualifications:

Local presence and engagement: We have staff based in Pensacola who are actively supporting the City of Pensacola on current projects, including providing similar owner's representative services. Our team understands local permitting processes, stakeholder dynamics, and regional needs. We're ready to mobilize immediately.

Healthcare and demolition expertise: Jacobs has designed and managed complex healthcare projects and facilities across the country—and many of those projects included demolition components and construction of new infrastructure at the existing site. Our team has also led intricate demolition projects in heavily developed areas, and we understand the importance of items like site safety, traffic flow adjacent to the site, and dust control.

End-to-end program management: We offer in-house licensed architects, engineers, CEI professionals, schedulers, inspectors, and project managers who bring experience managing projects from concept to closeout—ensuring alignment with your goals for quality, cost-efficiency, and timely delivery.

Public engagement and stakeholder support: We know this project has high visibility and an extensive stakeholder network. We stand ready to assist the City with comprehensive public engagement and stakeholder coordination throughout the duration of the project. Our public engagement team routinely works throughout the Panhandle, and our engagement program is scalable to meet the needs for information distribution.

Grant funding assistance: Jacobs has supported clients across the U.S. in managing grant funded infrastructure projects, including documentation, labor compliance, Section 3 engagement, and state and federal procurement adherence.

From the pre-construction work to the final site stabilization, Jacobs will serve as a trusted extension of the City's staff—an advocate committed to safely delivering a project that will benefit the community for decades. We appreciate the opportunity to be considered and look forward to continuing to serve the City of Pensacola. If you have questions on the information contained in our qualifications package, please contact Project Manager Josh Wallace at Joshua.Wallace@jacobs.com or 850.341.2980.

Sincerely,

Josh Wallace, PMP
Project Manager

Jacobs Project Management Co. (JPMCo) is submitting this proposal with the understanding from the terms included in the RFQ and expectation that the City and JPMCo will have the opportunity to work together to create a mutually acceptable agreement, supplementing and modifying the terms and conditions included with the RFQ, as appropriate for the services to be rendered. And, if selected, JPMCo respectfully requests the ability to clarify certain provisions, including but not limited to, insurance coverage requirements, service warranty, and JPMCo's standard of care.

State of Florida
Affidavit Regarding the Use of Coercion for Labor and Services
Pursuant to Florida Statute 787.06(13)

Vendor Name: Jacobs Project Management Company

Vendor FEIN: 35-2321289 Phone Number: 205.212.8015

Vendor's Authorized Representative Name and Title: Jason Abernathy | Southeast PMCM Business Lead

Address: 25 W. Cedar Street, Suite 350

City: Pensacola State: FL ZIP: 32502

Email Address: jason.abernathy@jacobs.com

Section 787.06(13) Florida Statutes requires all nongovernmental entities executing, renewing, or extending a contract with a governmental entity to provide an affidavit signed by an officer or representative of the nongovernmental entity under penalty of perjury that the nongovernmental entity does not use coercion for labor or services.

The undersigned hereby certifies that he/she is an officer or authorized representative of the vendor identified above and that said vendor does not use coercion for labor or services as defined in Section 787.06 Florida Statutes.

Florida Statute 787.06
(2)(a) "Coercion" means:
1. *Using or threatening to use physical force against any person;*
2. *Restraining, isolating, or confining or threatening to restrain, isolate, or confine any person without lawful authority and against her or his will;*
3. *Using lending or other credit methods to establish a debt by any person when labor or services are pledged as a security for the debt, if the value of the labor or services as reasonably assessed is not applied toward the liquidation of the debt, the length and nature of the labor or services are not respectively limited and defined;*
4. *Destroying, concealing, removing, confiscating, withholding, or possessing any actual or purported passport, visa, or other immigration document, or any other actual or purported government identification document, of any person;*
5. *Causing or threatening to cause financial harm to any person;*
6. *Enticing or luring any person by fraud or deceit; or*
7. *Providing a controlled substance as outlined in Schedule I or Schedule II of s. 893.03 to any person for the purpose of exploitation of that person.*

(2)(e) "Labor" means work of economic or financial value.
(2)(h) "Services" means any act committed at the behest of, under the supervision of, or for the benefit of another. The term includes, but is not limited to, forced marriage, servitude, or the removal of organs.

Under penalties of perjury, I declare that I have read the foregoing document and that the facts stated in it are true.

52.209-5 FAR Certification Regarding Debarment, Suspension, Proposed Debarment, and Other Responsibility Matters

The Offeror certifies, to the best of its knowledge and belief, that the Offeror and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Offeror has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror nonresponsible.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

52.209-6 FAR Protecting the Government's Interest When Subcontracting with Contractors Debarred, Suspended, or Proposed for Debarment

1. The Government suspends or debars Contractors to protect the Government's interests. The Contractor shall not enter into any subcontract in excess of $25,000 with a Contractor debarred, suspended, or proposed for debarment unless there is a compelling reason to do so.

2. The Contractor shall require each proposed first-tier subcontractor, whose subcontract will exceed $25,000, to disclose to the Contractor, in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Federal Government.

3. A corporate officer or a designee of the Contractor shall notify the Contracting Officer, in writing, before entering into a subcontract with a party debarred, suspended, or proposed for debarment (see FAR 9.404 for information on the Excluded Parties List System). The notice must include the following:

A. The name of the subcontractor.

B. The Contractor's knowledge of the reasons for the subcontractor being in the Excluded Parties List System.

C. The compelling reason(s) for doing business with the subcontractor notwithstanding its inclusion in the Excluded Parties List System.

D. The systems and procedures the Contractor has established to ensure that it is fully protecting the Government's interests when dealing with such subcontractor in view of the specific basis for the party's debarment, suspension, or proposed debarment.

DRUG-FREE WORKPLACE CERTIFICATE

IDENTICAL TIE BIDS - Pursuant to Section 287.087, Florida Statutes, preference shall be given to business with Drug-Free Workplace Programs. Whenever two or more bids which are equal with respect to price, quality, and service are received for the procurement of commodities or contractual services, a bid received from a business that certifies that it has implemented a Drug-Free Workplace Program shall be given preference in the award process. Established procedures for processing tie bids will be followed if none of the tied vendors have a Drug-Free Workplace Program. In order to have a Drug-Free Workplace Program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2) Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a Drug-Free Workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3) Give each employee engaged in providing the commodities or contractual services under bid a copy of the statement specified in subsection (1).

4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5) Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6) Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

B. Firm Information

Overview

Jacobs is one of the world's largest and most diverse providers of professional and technical services. Founded in 1947, we are publicly traded with annual revenues exceeding $11 billion. Our portfolio includes healthcare, commercial, academic, science and technology, community and mixed-use planning, campus context, infrastructure, mission critical, energy and power, and federal projects of all types and sizes. For the Buildings & Infrastructure Americas Division, our resources include more than 5,600 program and construction managers, architects, engineers, environmentalists, and other personnel, with 350+ healthcare-experienced professionals on staff, including more than 50 senior healthcare program/project directors and managers.

Business Structure

Our corporate/business structure focuses on the following end markets: Advanced Manufacturing; Cities & Places; Energy; Environmental; Life Sciences; Transportation; and Water. Our Chair & Chief Executive Officer is Bob Pragada. Our focus is on accelerating global demand for innovative, technology-enabled infrastructure and technically complex projects.

95% of our work is repeat business

Jacobs Project Management Company (JPMCo), a subsidiary to Jacobs Solutions Inc. (Jacobs), is a corporation formed in the state of Delaware and is certified by the Florida Secretary of State with a status of good standing. More than 95 percent of our work is repeat business. Our commitment to client value and partnership produces consistent cost advantages, profits, and growth, allowing us to attract and retain the industry's top talent. Our strict dedication to safety and uncompromising ethics and integrity creates a work environment that promotes employee progress and helps grow our business.

We're Local—Your Success is Our Success

Our proximity provides you the benefit of immediate responsiveness, increased accessibility, local presence, commitment, and familiarity.

For 30 years, we've served clients in the Florida Panhandle. Our history in the region includes serving municipal/utility clients such as Escambia County, City of Crestview, Santa Rosa County, Okaloosa County, City of Mary Esther, and City of Pensacola. We also provide extensive engineering and program support services to Tyndall Air Force Base and the USACE Mobile District. This project will be delivered through our Pensacola office located at 25 West Cedar Street, Suite 350, Pensacola, FL 32502.

Our team has deep roots in the area and, as such, we understand the challenges that communities in Northwest Florida must navigate. Project Manager Josh Wallace, Principal Scott Jernigan, and Field Observation Jeremy Chapman are located in our Pensacola office. They are backed by our extensive network of 40,000+ reach-back staff resources to support any need that may arise on this project.

Jacobs has a 50-year track record for serving more than $50 billion in healthcare programs. We partner with health systems around the world to deliver industry-leading solutions across various phases of the project lifecycle, including planning, design, construction, commissioning, activation, optimization, and specialized health system advisory and consulting. We have managed the construction (and demolition) of entire medical campuses including complex vertical expansion, multiphase renovations within occupied environments, and major infrastructure re-configurations.

Firm Information

Quick stats

Number of years in business:
30 years in the Panhandle
78 years companywide

Distance from Site:
2.5 miles

Our proven delivery and strong client focus have resulted in many long-standing partnerships over the years, and in just the last 15 years, we have supported more than 100 healthcare clients. In executing these contracts, we routinely work with industry-leading healthcare planners and designers, providing program management, project management oversight, owner's representation, staff augmentation and agency construction management. Our healthcare portfolio includes 42 ambulatory care centers, 30+ major academic medical centers, and 22 urban safety net hospitals.

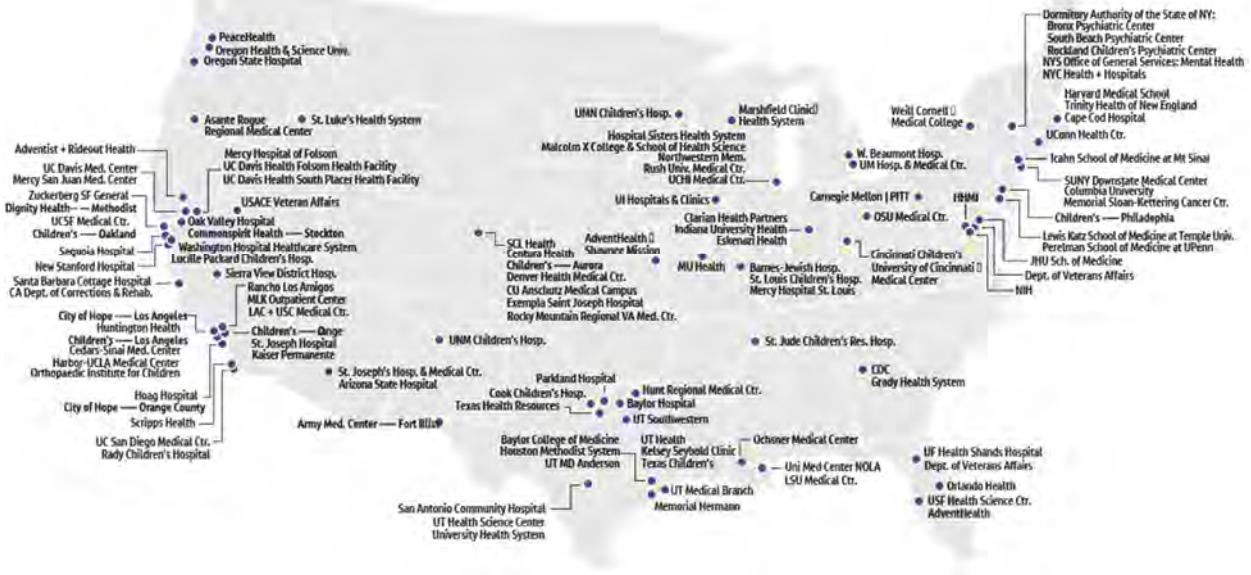
Jacobs provides a full range of professional services, making us a single source provider. This "total team" approach means that Jacobs can readily provide support for unanticipated technical challenges that might arise on a project of this magnitude. The depth of our technical and professional staff includes a significant number of project managers and specialists with relevant experience for all aspects of this project: healthcare spaces, decommissioning, demolition, site restoration, and design build. Additionally, the former Baptist Hospital Complex site is located less than 3 miles from the Pensacola Jacobs office.

Our "total team" approach means that Jacobs can readily provide support for unanticipated technical challenges that might arise on a project of this magnitude.

As part of a large and comprehensive professional support services organization, Jacobs has the necessary resources for supporting your future capital program and facilities expansion needs. Our network of healthcare project experience becomes your network of resources.

In an ever-changing healthcare environment, it helps to have a trusted partner with a full spectrum of comprehensive services, tools, and professionals who understand your industry. Changing times call for new thinking and new solutions. Jacobs is here to help.

Serving the Nation's Top Hospitals



Litigation Summary

Jacobs Project Management Co. (JPMCo), its parent, Jacobs Solutions Inc. (Jacobs) and related companies and affiliates form a global organization that has the technical, financial, and professional qualifications and resources to deliver Owner's Representative for Decommissioning and Demolition of the Former Baptist Hospital Complex project for the City of Pensacola. Jacobs Solutions Inc.'s annual reports, SEC filings, and Proxy reports can be found at http://invest.jacobs.com/investors/Jacobs-Filings/default.aspx. From time to time and in the ordinary course of its business, JPMCo is subject to various claims, disputes, terminations, arbitrations, and other legal proceedings. It is JPMCo's practice to defend itself in such actions, many of which are generally subject to insurance, and none of which are expected to have a materially adverse effect on the organization's consolidated financial statements. No such litigation is expected to have any impact on JPMCo's potential ability to perform the contract.

C. Evaluation Criteria

Firm Experience with Healthcare and D&D Projects

Jacobs has successfully provided program, project, and construction management services for all major building and client types—public and private sector, including commercial development. We have supported these clients in all phases of project, from pre-design/programming, design, pre-construction, construction, close-out, and commissioning. Our integrated approach ensures seamless coordination across disciplines, driving efficiency and reducing risk throughout the project lifecycle. With a proven track record of delivering complex projects on time and within budget, Jacobs continues to be a trusted partner for clients nationwide.

Jacobs brings a proven background in demolition services, with a portfolio of successful projects that demonstrate our technical expertise, safety standards, and operational efficiency. The local team proposed has history in construction management, demolition, and decommissioning. To strengthen the local group, the assembled team's experience includes support from our seasoned demolition teams currently engaged in active projects. This reach-back capability ensures that the proposed team will have immediate access to expert guidance, best practices, and operational support, enabling them to deliver high-quality results aligned with our company's standards. The projects presented show what we can do for similar scopes of work, and we want to bring that expertise to the City of Pensacola.

Relevant Project Experience

Project Elevate

Pensacola, Florida | Date of Project: August 2022 – January 2025

Project Owner's Representative:
Jacobs
25 W. Cedar St., Suite 350
Pensacola, FL 32502
850-341-2980

Client Representative:
Karen Dietrick
Vice President of Operations
223 W. Gregory St.
Pensacola, FL 32502
561-436-5120

Size of Project:
393,000 SF / 20 acres

Cost of Project: $64,620,782

Work for which Jacobs was responsible: Owner's Representative (Contracts, Budget, Quality, Schedule, 3rd Party Vendors, Owner FF&E Purchasing, Documentation, Safety Observations)

Scope: Jacobs managed a General Contractor on a 50-acre site (20 acres of new development) for multifamily apartments and town homes including pool, fitness center, and amenity area. The North Site is composed of three, 3-story buildings for 108 apartments for over 90,000 square feet. The South Site is made up of 27 buildings totalling 210 town homes and 300,000 SF. Cost for scope combined to $64 million. Josh Wallace, also our proposed Project Manager for the City's project, oversaw pre-construction scope review through to contract execution. In his role, he processed bidding and awards for project scope; pushed the General Contractor (GC) and Design Team to resolve issues as to not delay construction; managed the schedule and budget to meet clients' requirements and ensure no impacts to the schedule were the fault of the client; and handled necessary permits for site development and buildings from start to finish while coordinating any changes needed to have construction progress.

Project Elevate

Pensacola, Florida | Date of Project: August 2022 – January 2025

Jacobs successfully mitigated two major risks—unsuitable soils and long-lead electrical gear delays—by proactively challenging proposed cost impacts and implementing creative solutions. When the GC submitted a $750,000 change order for soil remediation, Jacobs engaged an in-house geotechnical SME, validated scope, and provided on-site oversight, managing the final cost to $474,000—saving $275,000. Separately, a $225,000 delay claim due to a late switchgear was avoided when Jacobs traced the delay to the subcontractor and implemented material substitutions that reduced lead time by up to four months. Jacobs also rescheduled turnover sequencing to maintain momentum and turnover. **In both cases, the client avoided unnecessary costs and maintained project continuity and schedule**.

Key staff involved on project and also assigned to Baptist Hospital Complex project: Josh Wallace, Scott Jernigan, Kenny Bennett

American Magic Facility

Pensacola, Florida | Date of Project: September 2024 – Expected Completion: November 2025

Project Owner's Representative:
Jacobs
25 W. Cedar St., Suite 350
Pensacola, FL 32502
850-341-2980

Client Representative:
Anna Kate Baygents, Asst. Economic Development Dir.
222 W. Main St.
Pensacola, FL 32502
850-435-1643

Size of Project: 55,000 SF
Cost of Project: $17,289,933

Work for which Jacobs was responsible: Owner's Representative (Budget, Quality, Schedule, Owner FF&E Purchasing, Documentation Review/Management)

Scope: This project entails the construction of a two-story commercial building with mixed occupancy classifications, designed to accommodate both industrial and office spaces. The structure features a Group F-1 (Factory Industrial) occupancy on the first floor, spanning 56,000 square feet, and a Group B (Business) occupancy on the second floor, covering 11,584 SF. Built to Type II-B construction standards and fully sprinkled, the building reaches a height of 55 feet. The facility incorporates various amenities and functional areas, including an elevator, stairwells, a gym, bathroom/ shower facilities, a kitchen and dining area, and a specialized boat storage and maintenance space. The second-floor houses 17 offices and a conference room, providing ample space for professional operations. This multi-functional building aims to create a versatile environment that seamlessly integrates industrial activities with office work, adhering to building codes and safety standards while offering amenities for American Magic. During the pre-construction phase, the Jacobs team assisted with initial savings of approximately $7 million by evaluating options for rehabilitating the existing warehouse or to construct a new warehouse. After vetting by Jacobs, a new warehouse was chosen after both options were presented to the City of Pensacola. **During construction, there have been schedule mitigation efforts to ensure there is not a direct impact to the overall timeline. This was accomplished by proactively reviewing tenant-added scope and strategically segmenting the work, allowing the project to maintain its original Substantial Completion date for opening.**

Completion Status – 65%

Key staff involved on project and also assigned to Baptist Hospital Complex project: Josh Wallace, Kenny Bennett, Ken Dane, Scott Jernigan, Kevin Waddell

AdventHealth Tampa – Taneja Center for Innovative Surgery

Tampa, Florida | Date of Project: 2016-2021

Project Owner's Representative:
Jacobs
5401 W Kennedy Blvd.
#900, Tampa, FL 33609
813-282-3500

Client Representative:
Tyson Davis, CFO
3100 E. Fletcher Ave.
Tampa, FL 33613
813-615-7159

Size of Project: 300,000 SF
Cost of Project: $256 million

Work for which Jacobs was responsible: Program Management (Budget Development, Demolition & Construction Management, Schedule & Financial Management, Activation)

Scope: As part of AdventHealth Tampa's strategic campus expansion, the Fletcher Medical Office Building was scheduled for demolition to prepare the site for the new Taneja Center for Innovative Surgery. This phase of the project was executed with a strong emphasis on safety, environmental responsibility, operational continuity, and community impact mitigation.

The demolition process began with a comprehensive environmental assessment to identify hazardous materials such as asbestos and lead-based paint. Licensed abatement contractors were engaged to perform removal and disposal in accordance with U.S. Environmental Protection Agency (EPA) and Occupational Safety and Health Administration (OSHA) regulations. Air monitoring and clearance testing were conducted to ensure the site met safety standards prior to structural demolition.

Utility disconnection was carefully coordinated with local service providers to ensure all electrical, water, sewer, gas, and telecommunications systems were safely terminated. This step was essential to protect both the demolition crew and adjacent hospital operations, and to preserve infrastructure needed for future construction.

A site-specific safety plan was implemented to guide all demolition activities. This included perimeter fencing, controlled access, and dust and noise mitigation measures. The building was dismantled using controlled techniques to minimize disruption to the surrounding campus and ensure the safety of all personnel.

Special attention was given to maintaining continuity of pedestrian and vehicular traffic throughout the demolition phase. Temporary walkways, signage, and traffic control measures were established to ensure safe and efficient movement around the site. Coordination with hospital operations ensured that patient access, emergency routes, and staff mobility were uninterrupted. The safety of patients, staff, visitors, and the surrounding community remained a top priority, with daily monitoring and adjustments made to minimize risk and inconvenience.

Following demolition, debris was sorted for recycling and hauled off to approved disposal facilities. Materials such as concrete and steel were diverted from landfills whenever possible. The site was then graded and stabilized, creating a clean and secure foundation for the upcoming construction of the Taneja Center.

This demolition project represented a key milestone in AdventHealth Tampa's transformation, enabling the development of a cutting-edge surgical facility that will enhance patient care and support the hospital's long-term growth.

AdventHealth Tampa – Taneja Center for Innovative Surgery

Tampa, Florida | Date of Project: 2016-2021

Key staff involved on project and also assigned to Baptist Hospital Complex project: Mike McIntyre, Randall "Buzz" Summerford, James Phillips

Escambia County Warehouse

Pensacola, Florida | Date of Project: May 2025 - Expected Completion: October 2025

Project Owner's Representative:
Jacobs
25 W. Cedar St., Suite 350
Pensacola, FL 32502
850-341-2980

Client Representative:
Liz Bush
Facilities Management
Construction Manager
100 E. Blount Street
Pensacola, FL 32501
850-595-3450

Size of Project: 10,000 SF
Cost of Project: $400,000

Work for which Jacobs was responsible: Owner's Representative (Demolition, Quality, Schedule, Budget/Pay Application Review, Documentation Review/Management)

Scope: Jacobs is leading the successful execution of a wastewater treatment plant demolition project, providing end-to-end oversight and coordination. This includes managing coordination of utilities to remain as well as underground components needing to be removed from the site. Our scope also includes engineering efforts for new work, conducting inspections and field observations, and delivering Owner's Representative services to ensure alignment with project goals and regulatory standards. Compliance with EPA requirements for erosion control methods are key to progress of new scope with existing utilities and inlets on site. Project Manager Josh Wallace will also oversee the installation of a new concrete slab and warehouse structure, ensuring quality control and adherence to schedule throughout construction. The role encompasses both technical and managerial responsibilities, ensuring the project is to be completed safely, efficiently, and to the satisfaction of all stakeholders. No savings have been substantiated on this project. The client did have a change request for the footing required at the new slab. However, after vetting submission from the GC along with increased material rates due to economic reasons, Jacobs recommended the client did not proceed with the change and the County agreed.

Completion Status – 40%

Key staff involved on project and also assigned to Baptist Hospital Complex project: Josh Wallace, Scott Jernigan, Ken Dane

Okaloosa County School District, Total Program Management

Pensacola, Florida | Date of Project: 1999 - Present; Expected Completion: Ongoing

Project Owner's Representative:
Jacobs
25 W. Cedar St., Suite 350
Pensacola, FL 32502
850-341-2980

Client Representative:
Grant Meyer, Assistant Superintendent
202A Hwy 85N
Niceville, FL, 32578
850.865.5583

Size of Project: 29 schools

Cost of Project: $540 million

Work for which Jacobs was responsible: Total Program Management (All services, including design, construction, permitting, commissioning)

Scope: Jacobs/Titan has provided turnkey program management for six consecutive phases of Okaloosa County School District's Capital Improvement Program totalling $540 million. Phase I included design-build delivery of renovations/ additions at 29 schools, three new schools, and a new centralized cook/chill kitchen facility. Phases II, III IV, V and VI are task order-based IDIQ programs for deferred maintenance projects, technology and MEP upgrades, classroom additions, and various school renovations affecting more than five million square feet of District space. Services have included assessment, scope definition, design management, procurement, construction management, closeout, and operations and maintenance. Project highlights include:

- Minimized impact of construction on student learning through creative scheduling methods to optimize on-time delivery of projects.
- Delivered $32 million in cost savings to OCSD over the past 29 years.
- Assisted with developing a successful local participation program to keep the work local, create jobs, and boost the local economy. We developed processes to help small companies bid the work.
- Completed more than 300 addition and renovation projects at 38 OCSD schools within budget and without missing a single scheduled school opening date.
- Assisted the District in securing a $3M settlement for Hurricane Ivan damages versus an initial settlement of $25,000 through diligent record keeping and fruitful negotiations with FEMA over a period of six years.
- Our Safety Team has completed local safety orientation classes for more than 3,000 construction workers who have worked on OCSD programs.
- Over a 29-year period, we've maintained a lost-time incident rate significantly lower than the national construction average for which the team has received corporate recognition.

Key staff involved on project and also assigned to Baptist Hospital Complex project: Josh Wallace, Scott Jernigan, Kevin Waddell

Additional Firm Project Experience

Anne Arundel County Public Schools, Ongoing Demolition Work

Annapolis, Maryland | Date of Project: 1997-Ongoing

Scope: Jacobs has been providing Project & Construction Management services to Anne Arundel County Public Schools (AACPS), continuously, since 1997. During our long relationship with the client, the majority of our school projects have involved major demolition. These include the mass demolition of six full school buildings, including full site development of the existing school site area and construction of a new school building at each site. Jacobs' AACPS work also included partial demolition at seven other school projects, which typically included mass demolition of a portion of each building, heavy selective "full-gut" demolition of the remainder of the existing building, full renovation of the existing to remain building's interior and envelope, construction of new building additions, and full site development. All demolition projects typically included abatement and disposal of hazardous materials such as asbestos, lead, fluorescent lighting tubes, PCB light ballasts, mercury thermostats, HVAC refrigerants, etc. Most recent demolition projects included LEED documentation tracking with recycling percentages for all demolition debris as required to gain LEED Silver certification of the overall project. Many of the demolition projects included construction of on-site or off=site swing space for the existing building's occupants.

Australian Embassy Demolition/Replacement

Washington, D.C. | Date of Project: December 2019-August 2023
Size of Project: 220,000 SF | Cost of Project: $200 million (total)

Scope: A new embassy was built to replace the existing embassy, which was built in the 1960s. Jacobs provided full Program Management services for construction of the new embassy, a process which included demolition of the existing building. The existing building was six stories above and two stories below grade, situated at two major D.C. intersections, adjacent to the Philippines embassy site, with a high-rise apartment complex across the street. The process included decommissioning, abatement for lead paint and asbestos, demolition, site restoration, and constructing the new building. The biggest challenge was limited space for demolishing a building made of solid concrete. It was dismantled one "small" section at a time beginning at the top level. The neighboring residents were an important consideration, and the Jacobs team communicated with them regularly for project updates.

New York City Health & Hospitals, Covid-19 Hospital Demolition/Renovation

Bronx, New York | Date of Project: March 2020-April 2020

Size of Project: 70,000 SF | Cost of Project: $65 million

Scope: Jacobs provided Construction Management (CM) services for the emergency renovation project involving the restoration of four floors at Coler Hospital that had been unused for 10+years. All floors were filled with an excess of damaged, obsolete equipment that had been stored there indefinitely. The Jacobs CM team provided 24/7 oversight until the required project was completed. The project team included Northstar, a major demolition/abatement/disaster recovery contractor as the assigned General Contractor, three subconsultant CM firms, with Jacobs serving as the Prime Construction Manager, and other CM firms providing FF&E, contract administration, and HazMat testing/assessment services. Jacobs coordinated all work to ensure the additional capacity was delivered in time to meet the City's pressing need to begin receiving the rapidly expanding number of COVID-19 patients. Day-to-day tasks included detailed documentation of the time and material contract necessary for compliance with FEMA requirements. This fast-track project resulted in 395 additional beds to the City in support of the COVID-19 effort.

Children's Hospital of Philadelphia – New 22-Story Inpatient Tower/Demolition

Philadelphia, Pennsylvania | Date of Project: 2022-Ongoing through 2028

Scope: Jacobs is the Program Manager for construction of a new patient tower, including the process of demolishing three buildings and a parking garage. To date, two of the buildings have been demolished and the third is in the process of being demolished; the fourth is scheduled to come down when the new tower is substantially complete. Enabling work and site constraints posed the biggest challenges: dismantling of inter-crossing utilities that were shared by CHOP's main hospital and 10 other neighboring buildings, some belonging to other owners, including N=1 redundancy for active clinical spaces. The immediate proximity to Penn Medicine and other major research laboratory buildings required stringent measures to minimize and monitor noise, vibration, and dust. Shared roadways required temporarily rerouting traffic flow during portions of the demolition. All of the sub-distribution, electrical panels, and the transformer will be used as temporary equipment during the patient tower build out.

John Hopkins University, Children's Medical & Surgical Center – 12-Story South Tower, Full Interior Demolition

Baltimore, Maryland | Date of Project: 2021-Ongoing through 2026

Scope: This project encompassed the total interior/exterior demolition of two 12-story connecting towers: stripped down to just building columns and floors for a total building envelope replacement, new utility infrastructure, and complete redesign of interior spaces to house laboratories and support spaces throughout. Jacobs' scope includes program management of the 3 towers and all planning for new lab spaces throughout the towers. Debris fences were hung vertically along sides of the 12-story building to prevent debris from falling onto other buildings or public right-of-ways as the entire exterior skin was demolished. The existing "South" tower demolition is near completion; the new "North" tower has been under construction since Spring 2021 and will sit alongside the two existing towers. Once the South and North towers are complete, the third "West" tower will be decanted and prepared for total interior/exterior demolitions. The biggest challenge has been the tight urban site, bounded by buildings on all sides, including portions of a large, active hospital complex. Maintaining compliance with Joint Commission and ICRA requirements requires constant vigilance. This 3-tower project is estimated to be complete by June 2026. Jacobs is completing another project for this client, an interior science building demolition/renovation, much smaller in scale.

New York City Housing Authority, Program Management Services, On-call Contract

New York City, New York | Date of Project: 2022-Ongoing

Scope: New York City Housing Authority's (NYCHA) major capital programs are funded by various funding streams from Federal, State, and City sources, for rehabilitating its housing stock. Jacobs provides full program management services for occupied and vacant facilities where total, partial, and structural demolitions are an integral part of the work throughout the system. As of Feb 2022, Jacobs had $576.4 million of work in progress or completed, within a contract valued at up to $1 billion. Jacobs manages the program with the goal of expediting the completion of critically needed upgrades. The "Basic Program Management Services" contract specifies managing and coordinating all aspects of: planning/scheduling, analysis of alternatives, funding management and administration, financial reporting, metric management, oversight of design coordination, CM team, procurement, scheduling, quality control, safety & health, coordination of construction activities with residents in occupied spaces and of the closeout process for each project. For the Elevator Modernization Program, Jacobs oversees bidder outreach, direct contact with union/ trade leadership and hosting pre-bid conferences.

New York City DDC, Bellevue Men's Shelter, Building Upgrades and Modernization

New York City, New York | Date of Project: 2018-Ongoing

Size of Project: 168,886 SF - 7 phases | Cost of Project: $84 million

Scope: Jacobs provided pre-construction and construction CM services for an $84 million project at the largest, fully occupied, single-site homeless shelter in the US (850 beds), formerly the Bellevue Hospital. This required developing and executing a multi-phase swing space construction schedule consisting of seven phases over a six-year period. The building is a nine-story 1930s historic building in Manhattan, with four wings and a connecting center section. The work consisted of roof replacement and ACM abatement, façade restoration, window replacement and electrical generator upgrades. The seven-phase strategy was to complete the work one wing at a time, renovate, reoccupy and move to the next phase. Jacobs also managed all the move management planning. This LEED Silver project's scope included demolition (including total removal of all elements down to the existing poured-in-place waffle slab concrete structure) and construction for the rehabilitation of the existing 168,886 GSF building. The project also includes complete interior renovation, rehab of the existing building envelope, substantial structural modifications, new mechanical, electrical, plumbing, fire protection, elevator systems and sitework. Through Jacobs' construction activities and pre-planning, Jacobs has gained extensive knowledge of the building to the point where, when the facility receives an inspection from another agency (i.e. NYCDOB, FDNY, DOH, OTDA, et al), Jacobs is called to assist and help the facility managers with the walkthrough.

Philadelphia Navy Yard, Naval Facilities Engineering Command (NAVFAC)

Philadelphia, Pennsylvania | Date of Project: 2017-2020

Scope: Work took place in an active/occupied shipyard and foundry; the Jacobs team designed and managed the renovation of existing facilities for extensive upgrading and modernization. The project included structural changes, building demolition, renovation of manufacturing areas (while keeping the facility operational), upgrades to electrical site distribution and building interior power distribution, construction of a new maintenance service building, site utilities and parking improvements and restoration of roadways. Demolition in a decades old facility required an intense effort - to decommission power infrastructure while not affecting adjoining facilities; removal of asbestos on floors, walls and roofs, removal of furnaces with asbestos lining, removal of universal waste, demolition of concrete slabs over 4 ft in thickness, removal of large concrete foundations using horizontal diamond wire saws, demolition of buildings using hydraulic shears mounted on excavators, surgical removal of equipment and structural members. All work was performed under a tight deadline and required schedule coordination with facility operations and the general contractor.

SUNY Downstate Medical Center Boiler Project Demolition

New York City, New York | Date of Project: January 2014-September 2020

Size of Project: 2 buildings | Cost of Project: $100 million

Scope: Jacobs provided construction management services to the client for critical maintenance projects that were completed over a 6-year period, from 2014-2020, and took place on two active, fully occupied facilities. The demolition and replacement of their entire existing boiler plant was the last task to be completed on the contract and was phased to keep the medical facility in operation during the replacement of five high pressure boilers. A temporary plant with two 40,000PPH boilers was built to carry a portion of the steam load as the contractor decommissioned the existing boilers. The phases were organized with no margin for error to avoid schedule slippage and also to prevent steam service to the hospital facility from being interrupted. By recommendation of Jacobs, the size of the two temporary boilers were increased to 75,000PPH boilers to maintain the entire steam load provided by the boilers that were being replaced. This allowed the contractor to decommission, abate, and demolish the entire existing boiler plant. That decision proved to be invaluable to keeping the project on schedule. This is a complex and congested campus where it was paramount to uphold and exceed all levels of expectations using proven quality control standards during all phases of work.

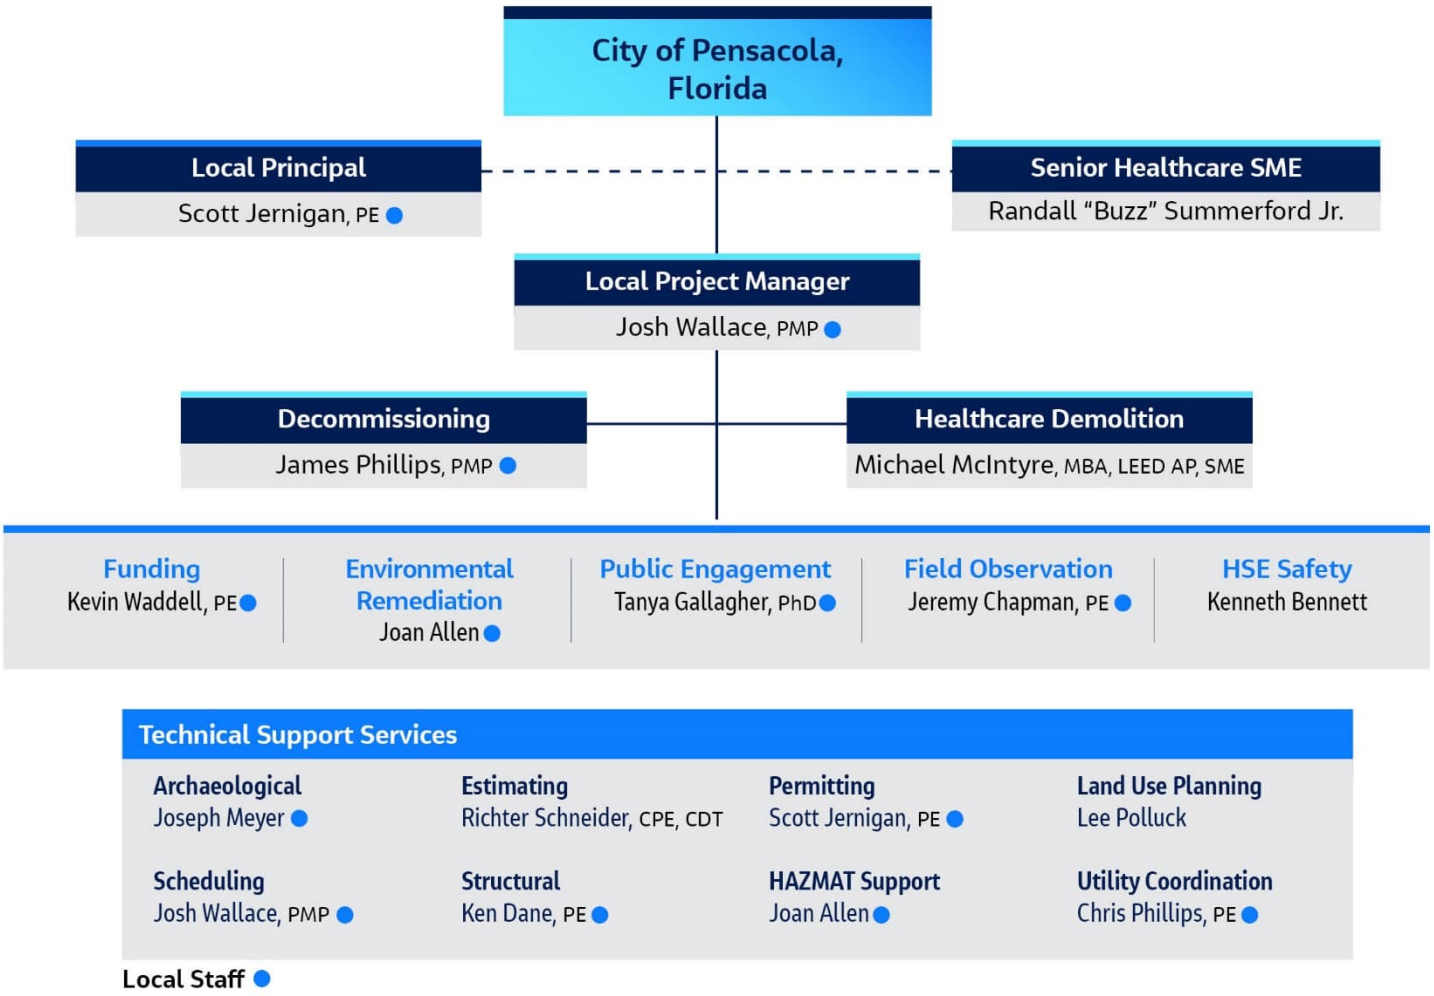
Experience and qualifications of the project team

The Jacobs Team offers the City of Pensacola a core local project team the City knows and trusts with a demonstrated history of successful performance on a multitude of projects throughout the Panhandle. Our team possesses specific expertise in all the technical disciplines, giving us a unique combination of similar project experience, familiarity with regional geography, understanding of funding program requirements, and vast resources making it possible to successfully deliver this project to meet quality, schedule and cost standards.

We have created a nimble organizational structure that offers a dedicated core team supported by scalable support and a deep bench of technical support. This structure enables Jacobs to right-size the team as necessary to accommodate project workloads. We are ready, willing, and able to hit-the ground running!

The following organizational chart and resumes present Jacobs' key personnel proposed for this project and demonstrate the depth and qualifications of our team. These individuals will assume day-to-day responsibilities across all stages of the Decommissioning and Demolition of the Former Baptist Hospital Complex project, as outlined in the Scope of Services.

Organizational Chart



Josh Wallace, PMP | Local Project Manager/Scheduling

Located in our Pensacola office, Josh brings over a decade of industry knowledge as project manager in municipal and commercial multi-million-dollar projects, construction techniques and management, and strategic project implementation. He is a collaborative communicator and an adept team member acting as a liaison between stakeholders to help align vision with cost. As a seasoned project manager, Josh excels at problem solving, value engineering, developing relationships with owners and contractors, and utilizing his project management skillset to assist clients in achieving their goals and objectives.

RELEVANT PROJECT EXPERIENCE

Escambia County Demolition & Warehouse, Demolition & Industrial Space, Pensacola, FL. Project Manager (Owner's Representative). The County's Representative to provide construction, engineering, inspection oversight, and project administrative services for the demolition of an existing wastewater plant and oversee new slab putback along with warehouse installation. Demolition scope included monitoring of material separation for hauling off-site to designated location. Management of engineering and inspection sign-off, internal to Jacobs, a part of scope; current completion set for October 2026 and projected to be on time and at budget.

American Magic High Performance Center of Excellence, Utilities, Industrial & Business Space, Pensacola, FL. Project Manager (Owner's Representative). Managed Project Management/Administration, quality control/inspection review, scheduling, and documentation management between the City of Pensacola, American Magic, the Port Authority, and General Contractor. Scope was for a two-story commercial building with mixed occupancy classifications (Industrial and Business), at a 55,000 square feet warehouse. Observed General Contractor progress to proactively mitigate any cost or schedule impacts. Current completion for November 2026 and projected to be on time and at budget.

Project Elevate, Utilities & Multifamily, Pensacola, FL. Project Manager (Owner's Representative). Managed a General Contractor on a 50-acre site for multifamily apartments and town homes including pool, fitness center, and amenity area. The North Site is composed of three, 3-story buildings for 108 apartments for over 90,000 square feet. The South Site is made up of 27 buildings totalling 210 town homes and 300,000 SF. Cost for scope combined to $64M. Oversaw pre-construction scope review through to contract execution. Processed bidding and awards for project scope. Pushed General Contractor and Design Team to help resolve issues as to not delay construction. Oversaw the schedule and budget to meet clients' requirements. Oversaw necessary permits for site development and buildings from start to finish while coordinating any changes needed to have construction progress.

University of Central Florida (UCF), The Marquee, Orlando, FL. Project Manager. An 85,000 SF student housing project in Orlando, FL with a contract value of $29M dollars. The project included hazardous material removal, demolition of the exterior framing of existing buildings, replacement of framing, new waterproofing/exterior skin, renovations on the interior of the bedrooms/corridors and leasing area. The project was also awarded a one-million-dollar hardscape, landscape, and pool package due to the client trusting Josh's leadership skills and the relationship built.

Dania Pointe Hardscape/Landscape, Fountain & Furniture Package, Fort Lauderdale, FL. Project Manager. Josh ran site MEP coordination with retail stores and site requirements while also overseeing the hardscape/landscape, site furniture buyout, and a multi-million-dollar fountain package for this mixed-use project. Project included safe-off and tie-in of existing underground utilities and the coordination of utilities for future tenants.

Hotel Indigo, Gainesville, FL. Project Manager. At about 93,500 SF and 140 rooms, this new-built boutique hotel included conference rooms, a full-service kitchen, cafe/dining, bar, fitness room, and an outdoor pool area. Josh and his team found an alternative framing method saving the budget upwards of 20 percent while also shaving time off the schedule. He oversaw documentation to support construction activities, submittals, RFIs, quality, and managed the contract execution, change orders, schedule, daily logs, and safety during construction.

Randall "Buzz" Summerford, Jr. | Senior Healthcare SME

Buzz has over 30 years of program and construction management experience spanning healthcare, research and clinical laboratory, higher education, industrial, religious, corporate and public markets. He provides program management services on projects of all sizes and complexities acting as the trusted advisor to the client as well as manager of professional services including planning, design, construction materials and threshold inspectors, surveyors, commissioning agents and transition planning/activation services. Additionally, Buzz's extensive experience as a General Contractor/Construction Manager in the on-site construction process including preconstruction, cost management, scheduling, procurement, development of means and methods of construction, trade coordination, subcontractor management, quality control, financial management, conflict resolution and project closeout provides an incredibly valuable resource to clients to mitigate program risks and position projects for success.

RELEVANT PROJECT EXPERIENCE

Skanska Commercial Development, Bank of America Tower, Houston, TX. Project Executive. Construction management services for the demolition of the historic 18-story Houston Club Building and the subsequent development of a 35-story, 780,000-square-foot Class A office tower in the heart of Downtown Houston. The project began with the strategic implosion of the existing 18-level structure, followed by full site clearance to prepare for new construction. The resulting high-rise features 11 levels of integrated parking and 21,000 square feet of retail space seamlessly connected to Houston's extensive underground tunnel network. Certified LEED Platinum v4, the tower incorporates advanced sustainability features, including Downtown Houston's largest green roof and a high-performance design that achieves a 25% reduction in energy consumption compared to standard office buildings. A standout feature is the below-grade retail and culinary marketplace, offering upscale dining and retail experiences while serving as a dynamic, collaborative space for both tenants and the public.

AdventHealth Lenexa City Center Hospital, Lenexa, KS. Program Executive. Buzz oversees the new nine-acre 96-bed greenfield full-service hospital located in the Lenexa City Center development. The new hospital includes a six-level tower comprised of a partially-subgrade lower level through level 5, Emergency Department, Imaging, and Clinic Shell with a total of 244,553 SF (finished 187,992 SF, shelled 56,561 SF). The site development includes a loop drive and 243 Hospital surface and underground parking spaces with access to the adjacent Medical Office Building.

Orlando Health Inc., Bayfront Hospital Medical and Women's Pavilions at Institute Square, St. Petersburg, FL. Program Executive. Buzz oversees this multi-building AHCA-reviewable program that includes a 132,000 SF, four-level medical pavilion to provide multidisciplinary specialty cancer care and specialty orthopedic services to the local community. The 60,000 SF Women's Pavilion is being constructed adjacent to the Medical Pavilion and will provide women's health and wellness services to the residents of St. Petersburg. Buzz leads a team of up to six Jacobs representatives delivering PM, scheduling, and project controls services for the client and scales staff as needed.

Orlando Health Inc., Digestive Health Institute, Orlando, FL. Program Executive. Horizontal additions and renovations to the Ambulatory Care Center adjacent to the flagship hospital entry. The AHCA-reviewable project includes a new 50,000 SF structure to expand the Center for Advanced Endoscopy, Research, and Education, including additional procedure rooms, prep/post spaces, a new front lobby and registration, waiting and reception, provider and fellow offices, and shell space for future expansion of the program.

AdventHealth Tampa, Taneja Center for Surgery, Tampa, FL. Preconstruction, procurement management, and cost, schedule, and quality management for this COVID-era multiphase, $256 million program. The successful management of this project was the result of effective partnering, open and honest communications, and staff mentoring between the multiple stakeholders. The program includes a new 300,000 SF, six-level horizontal addition to the campus, structured to accept three future levels. Clinical spaces include a new 18-operating room surgery department with pre-op, post-op, and support space; two floors of patient bed space that includes 24 new intensive care unit and 48 new PCU beds, a new two-level main entry and entry canopy, a 15,000 SF new central sterile department, and new first floor public space with pre-admissions testing, registration, waiting, coffee/deli, chapel, and conference space.

James Phillips, PMP | Decommissioning

James is Jacobs Healthcare Transition Solutions practice lead and has successfully delivered project management, information technology, and consulting solutions for hospitals and other healthcare organizations over the last twenty-four years. James has led over 60 complex healthcare projects where he has provided overall activation, transition, and decommissioning management, including master scheduling, equipment planning, operational planning, vendor management and on-site project management. James has coordinated many challenging projects with varying logistical and time constraints. He has worked on replacement and expansion projects, as well as renovations, with many different types of healthcare facilities including children's hospitals, women and infant's facilities, critical care facilities, outpatient facilities, corporate headquarters, medical office buildings, and all sizes of hospitals from 20 to 900 bed facilities.

AdventHealth Wauchula, Replacement Hospital, Wauchula, FL. Project Lead. Responsible for the management of the transition/activation of the new 25-bed, 50,000 SF replacement hospital facility and decommissioning efforts of the vacated existing hospital facility. Key decommissioning efforts included the management of the removal of FF&E, proper disposal of IT, decontamination of spaces, as well as safe-off of utilities and securing of facility for mothball status.

Elmhurst Hospital, Replacement Hospital. Elmhurst, IL. Project Lead. Responsible for the management of the transition/activation of the new 327-bed, 800,000 SF replacement hospital facility and decommissioning efforts of the vacated existing hospital facility. Key decommissioning efforts included the management of the removal of FF&E, proper disposal of IT, decontamination of spaces, as well as safe-off of utilities and preparation for facility for demolition.

Guthrie Corning Hospital, Replacement Hospital and Medical Office Building, Tampa, FL. Project Lead. Responsible for the management of the transition/activation of the new 65-bed, 280,000 SF replacement hospital facility and decommissioning efforts of the vacated existing hospital facility. Key decommissioning efforts included the management of the removal of FF&E, proper disposal of IT, decontamination of spaces, as well as safe-off of utilities and securing of facility for mothball status.

Guthrie Troy Community Hospital, Replacement Hospital, Troy, PA. Project Lead. Responsible for the management of the transition/activation of the new 25-bed, 70,000 SF replacement hospital facility and decommissioning efforts of the vacated existing hospital facility. Key decommissioning efforts included the management of the removal of FF&E, proper disposal of IT, decontamination of spaces, as well as safe-off of utilities and securing of facility for mothball status.

King's Daughter's Health Hospital, Replacement Hospital and Medical Office Building, Madison, IN. Project Lead. Responsible for the management of the transition/activation of the new 86-bed, 307,000 SF replacement hospital facility and decommissioning efforts of the vacated existing hospital facility. Key decommissioning efforts included the management of the removal of FF&E, proper disposal of IT, decontamination of spaces, as well as safe-off of utilities and securing of facility for mothball status.

Sentara Martha Jefferson Hospital, Replacement Hospital, Charlottesville, VA. Project Lead. Responsible for the management of the transition/activation of the new 176-bed, 520,000 SF replacement hospital facility and decommissioning efforts of the vacated existing hospital facility. Key decommissioning efforts included the management of the facilitation of auction process for the sale of equipment, proper disposal of IT, disposal of furniture, decontamination of spaces, white boxing of spaces, as well as safe-off of utilities and securing of facility in preparation for sale.

Michael McIntyre, LEED AP | Healthcare Demolition

Mike provides expertise in integrated leadership and consultative PMCM services in the healthcare, engineering, and construction industries. He has supported client programs/projects ranging from $500K-$1.2B+. Mike has wide industry experience in a variety of market sectors including Aerospace, Commercial, Corporate, Government, Healthcare, Industrial, Infrastructure, K12/Higher Education, Central Energy Plants, Data Centers, and Infrastructure. His primary focus and competency rests in healthcare projects, and in managing cross functional teams comprised of internal and external resources. Mike has specialized experience in integrated PMCM systems and services delivery to support organizational transformation; improve operational efficiency and promote project success.

RELEVANT PROJECT EXPERIENCE

MD Anderson Cancer Center, Houston, TX. Deputy Program Director/Project Management. Provided Project Management for the planning, procurement, design, and construction for the new research campus at MD Anderson. Mike and his Jacobs team provided owner augmentation for 4 major projects, inclusive of working with the MDA Facility team to provide staffing for project procurements (A/E, CM, Consultants, CX, Activation). Jacobs provided operational alignment with MDA Executives and users groups throughout the design and approval processes, including verification of scope and budget from concept to GMP. Jacobs management support staff was integrated with MDA Project Management Information Systems (PMIS) to support full project lifecycle delivery. Provide leadership in development of execution strategies supporting both internal and external client solutions/technology roadmap and implementation. Provided program/project cost containment solutions to control capital allocations for the program, and offered technology, project management, integration, and automation of cross-functional processes for improved operating efficiencies. Mike is an effective resource providing team management to support internal initiatives and external client portfolios.

AdventHealth, Altamonte Springs, FL. Project Director/Project Manager. Responsible for healthcare project procurement of design, contracting, commissioning and activation on healthcare projects in five states. Working with AdventHealth as an extension of their PM staff, provided on site management as required, OAC meeting leadership, standardization of monthly reports, change management, and invoice process management. Extensive travel required for client facing and project management. Jacobs provide issue resolution and claims settlement as required, inclusive to regular meetings with the C-Suite at each remote site. Coordination and communication with all levels of healthcare client, contractor, and vendor management.

AdventHealth Cardiovascular Addition, Sebring, FL. Owners Representative. Team provided Selective Demolition of an existing Hospital and provide adaptive reuse to a cardiac are unit. Scope included interior and exterior demolition, cutting, capping and relocating existing utilities, and maintaining the integrity of the space in an operating hospital.

JL Hudson Company Demolition, Detroit, MI. Preconstruction Manager. Michael played a key leadership role in planning and managing the safe implosion of the 2.1 million-square-foot JL Hudson complex—one of the largest urban demolitions in U.S. history. His responsibilities included selecting the demolition method, overseeing extensive asbestos and lead abatement, and coordinating preparation of the 32-story structure for controlled implosion. He led risk management and safety planning, ensuring secure perimeters, traffic control, and public protection in a dense downtown environment. Michael also maintained clear communication with City officials and project leadership, providing updates on schedule, cost, and risk to ensure a safe and successful project outcome.

Scott Jernigan, PE | Local Principal/Permitting

Located in our Pensacola office, Scott is a project executive and client service leader in Northwest Florida with extensive planning, design, and construction experience. He has delivered infrastructure projects throughout the Southeast. Scott has led design teams to successfully deliver projects for municipal, federal, industrial, and private clients, and services on those projects have included planning, design, construction administration, permitting, and community outreach. He routinely works with diverse multi-disciplinary teams, and he understands the importance of empowering staff to have ownership in the project, engaging subject matter experts to provide senior guidance when needed, and clearly communicating with clients to ensure successful project delivery.

RELEVANT PROJECT EXPERIENCE

City of Pensacola On-Call General Engineering Services, Pensacola, FL. Project Executive. The general engineering services are provided through an as-needed contract with projects executed under sole-source task orders. The projects include development of municipal buildings and facilities and involve the planning, design, and construction management of these facilities. Scott serves as Project Executive and ensures the team has the resources necessary to deliver the on-call services for each task order.

Emerald Coast Utilities Authority, Main Street WWTP Demolition, Pensacola, FL. Project Manager. Scott served as project manager for the decommissioning and demolition of the Main Street Wastewater Treatment Plant (WWTP) located in downtown Pensacola. The project included identification of surplus material and equipment that the owner wished to retain and development of the demolition scope of work and phasing plan. The project included removal of the mechanical equipment and above grade piping, demolition of the concrete treatment tankage, demolition of a 5-story and 7-story buildings, backfill and site restoration. Scott also served as the on-site representative for this project.

City of Mary Esther, WWTP Package Plant Demolition, Mary Esther, FL. Project Manager. Scott served as project manager for the decommissioning and demolition of the WWTP package plant located in Mary Esther. The project included development of the demolition scope of work and demolition oversight. The project included removal of the mechanical equipment and piping, demolition of the concrete treatment tankage, backfill and site restoration. Scott also served as the on-site representative for this project.

Private Development Clients, Civil Design and Permitting, Pensacola, FL. Project Manager. Scott served as the project manager for multiple private developments located in downtown Pensacola. He led the civil design, utility coordination, and site plan permitting process through the City of Pensacola. He also assisted the developer with the building department permitting process.

Private Development Client, General Consulting Services, Pensacola, FL. Project Manager. Scott led the master plan for proposed developments located in downtown Pensacola. The project location included the Maritime Park and the Main Street WWTP parcel. The project included a sprint start planning process to develop the gameplan for the development team. The sprint start focused on items such as zoning, parking, permitting, and financing, and was concluded with a 2-day interactive workshop with the client and key stakeholders. The results produced a placemat that was used as the basis for the development plan.

City of Crestview, Crestview MSA, Crestview, FL. Project Delivery Lead. Scott serves as the project delivery lead for the City of Crestview general engineering services contract, where he is responsible for overall project delivery. He coordinates the Jacobs team to ensure delivery of multiple infrastructure projects. He has also served as project manager for the dewatering improvements project, effluent disposal project, Antioch elevated storage tank project, and Sewer Master Plan project.

Kevin Waddell, PE | Funding

Kevin, based in Jacobs' Pensacola office, brings comprehensive experience in infrastructure design, planning, permitting, and construction services. His portfolio spans water distribution systems, pumping stations, tank rehabilitations, wastewater treatment facility upgrades, and collection system assessments. Kevin has successfully delivered projects using both direct-buried and trenchless technologies. In addition to his technical expertise, Kevin has supported municipalities in identifying and securing project funding. He has provided grant application assistance for the Town of Ponce de Leon and managed the SRF program for the City of Crestview.

RELEVANT PROJECT EXPERIENCE

Town of Ponce de Leon Hwy 81 Wastewater Extension, Ponce de Leon, FL. Rural Infrastructure Fund (RIF) Grant Support. Assisted the Town in securing Rural Infrastructure Fund (RIF) grant funding to extend wastewater service along Highway 81, improving system capacity and supporting community growth.

Town of Ponce de Leon Wastewater System Preliminary Engineering Report, USDA SEARCH Grant, Ponce de Leon, FL. Funding Support. Provided funding/documentation support for a USDA SEARCH grant, helping the Town develop a Preliminary Engineering Report to guide long-term wastewater system upgrades.

City of Crestview (SR 85 Bypass Roadway, WWTP Solids Handling Improvements, WWTF RIB 6-9 Expansion, WWTF Effluent Reuse Expansion), Crestview, FL. Funding Support. Provided State Revolving Fund (SRF) program management and funding support for major projects, including a new bypass roadway, wastewater treatment facility solids handling improvements, WWTF expansions, and effluent reuse system upgrades.

City of Mary Esther (Mary Esther Drive Water & Sewer Improvements, Azalea Park & Caswell Circle Improvements, WWTP Package Plant Demolition), Mary Esther, FL. Funding Support. Led the SRF and CDBG funding applications and grant administration for the City's ongoing water and sewer improvements projects. Led the design team for upgrading water mains, rehabilitating sewer manholes and piping, rehabilitation of an oxidation ditch and secondary clarifier, and miscellaneous site and electrical improvements.

Joan Allen, PG | Environmental Remediation

Joan is a senior project manager with 39 years of experience in environmental project management. She demonstrates consistent successful performance in managing complex environmental projects, based on; project metrics including budget and schedule, technical quality, safety compliance, client satisfaction, project team satisfaction, and compliance with contract terms. Joan is a licensed professional geologist, project quality control manager, and site health and safety officer, able to provide a full range of project management and support services for public and private sector projects. She has completed extensive work with U.S. Air Force, U.S. Navy, Florida Department of Environmental Protection (FDEP), and U.S. EPA, and has experience working with various agencies and community groups including the Tyndall AFB Technical Review Committee, the Hurlburt Field Restoration Advisory Board, and Tier I Environmental Restoration Partnering Teams.

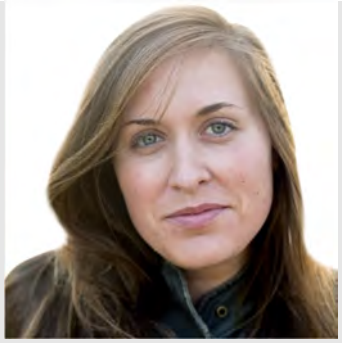
RELEVANT PROJECT EXPERIENCE

Naval Air Station Corpus Christi (NASCC), Naval Facilities Engineering Command Southeast, TX. Assistant Project Manager. Temporary and permanent construction repairs followed significant damage inflicted by Hurricane Harvey. Recovery support required knowledge of hazardous and toxic materials, continuous project tracking, generation of concurrence memorandums for the Naval Facilities Engineering Command contracting officer, generation of work scopes and cost estimates, procurement request submittals, and subcontractor mobilization coordination. Since post-hurricane stabilization was very fast-moving, Joan's attention to detail and her ability to make immediate decisions in the field were required to keep the NASCC building stabilization moving forward.

Tyndall Air Force Base, Air Force Civil Engineer Center, FL. Project Manager/Document Lead. Project components include design team support for rebuilding Tyndall AFB post Hurricane Michael, CERCLA remedial investigation, human health and ecological risk assessment, feasibility study, remedial alternatives evaluation, remedial design, and pilot study formulation and execution. Example Tyndall AFB Projects:

- Site Assessment/Baseline Risk Assessment F-22 Raptor crash site, concluded in Memorandum of Decision for no Further Action: Site Rehabilitation Completion.
- Remedial Investigation/Baseline Risk Assessment of an estuarine bayou. A Treatability Study of Dredging Technologies was conducted for development of remedial alternatives in the Feasibility Study.
- Remedial Investigation/Feasibility Study and Interim Remedial Action on a former World War II era shotgun skeet range.
- Preliminary Assessment/Site Investigation of a wastewater treatment plant spray irrigation field and holding pond.
- Remedial Investigation/Feasibility Study and Engineering Evaluation/Cost Analysis for a Non-Time-Critical Removal Action at an undocumented landfill.

Joan provided support in finalizing the Remedial Investigation/Baseline Risk Assessment (RI/BRA) which determined the human health and ecological risks and completed the draft Feasibility Study (FS) which allowed evaluation of remedial alternatives and remedial goal options. Joan's partnership with the EPA, FDEP, and AFCEE were key to the success of this project.



Tanya Gallagher, PhD | Public Engagement

Located in Jacobs' Pensacola office, Tanya has 17 years of experience in geospatial analysis and environmental resilience planning. Tanya is a highly motivated, detail oriented, environmental scientist with expertise in GIS, strategic planning, public administration, project management, and aquatic ecosystems. Tanya has experience map-making and applying GIS to help find solutions for local and regional projects. She's a fast learner with excellent research, technical writing, and public speaking skills.

RELEVANT PROJECT EXPERIENCE

Escambia County Vulnerability Assessment and Adaptation Plan, Escambia County, FL. Project Manager Played a central role in guiding Escambia County's efforts to identify and address climate-related risks such as flooding and sea level rise. Assisted with grant administration—ensuring compliance with Resilient Florida Program requirements, tracking budgets, and coordinating with state agencies—as well as leading public engagement efforts through community meetings, stakeholder workshops, and outreach campaigns. Through technical coordination, transparent communication, and fiscal accountability, helped to shape a resilience plan that reflects both expert insight and community priorities.

Emerald Coast Military Installation Resilience Review, Multiple Counties Northwest, FL. Deputy Project Manager. Oversaw the coordination and execution of a multi-county, multi-installation initiative aimed at enhancing mission resilience across Northwest Florida. Facilitated collaboration between military installations, local governments, and community stakeholders to assess vulnerabilities, develop strategic resilience plans, and prioritize over 50 actionable projects that strengthen critical infrastructure and services. Managed timelines, stakeholder engagement, and prepared progress reports and grant deliverables in alignment with the goals of the Office of Local Defense Community Cooperation's Military Installation Sustainability program.

Okaloosa County Vulnerability Assessment and Adaptation Plan, Okaloosa County, FL. Project Manager. Led the coordination and execution of a county-wide initiative to evaluate and address climate-related risks such as flooding and sea level rise. Oversaw data collection, stakeholder engagement, and technical analysis to assess the vulnerability of infrastructure, natural resources, and community assets. Ensured inclusive and effective public outreach that guided the development of adaptation strategies and aligned deliverables with the goals of the Resilient Florida Program grant requirements.

Jeremy Chapman, PE | Field Observation

Jeremy brings extensive leadership and project oversight experience to his role as Field Observer. He has successfully managed large, multi-state operations and is highly skilled in coordinating teams, monitoring performance, and ensuring work is completed safely, on schedule, and within budget. In the field, Jeremy excels at identifying and resolving issues in real time, maintaining clear communication with project managers, contractors, and City staff to keep activities aligned with project goals. His background engaging with executive leaders, government agencies, and community stakeholders equips him to provide thorough, reliable observation and reporting. Jeremy's attention to detail, commitment to safety, and collaborative approach ensure that the City receives accurate, proactive support throughout the life of the project.

RELEVANT PROJECT EXPERIENCE

U.S. Army Corps of Engineers, Mobile, AL. District Commander. Lead over 1,275 military and civilian personnel in executing an annual $1.8 billion program that provides project management, construction, regulatory, and engineering support to the states of Alabama, Florida, Georgia, Mississippi, Tennessee, and Central & South America. Executed and managed almost $3 billion in new construction contracts to rebuild Tyndall AFB after Hurricane Micheal destroyed the base. Responsible for overseeing the $200 million operations and maintenance of a civil works infrastructure that includes 27 multi-purpose reservoirs with hydropower plants, navigation on 2,200 miles of waterway, maintenance of 7 deep water harbors and 21 shallow parts, and over 400 recreation areas.

Mississippi Valley Division-USACE, Mississippi River. Deputy Division Commander. Second in command of the division, an organization of 4,500 civilians and military professionals across six districts along the Mississippi River. Provided world-class solutions for the $5 billion annual core missions: flood risk management, navigation, and emergency response. As Secretary of the Presidentially appointed Mississippi River Commission, Jeremy coordinated all plans for two trips per year and moderated the public meetings at each event. He was directly in charge of the emergency response mission, providing comprehensive and integrated division action to several coastal hurricanes and COVID-19. He helped to resource recovery efforts for the historic hurricane seasons in Louisiana and built several alternate care facilities in the region using emergency contract action in the wake of COVID-19. Jeremy was awarded the Legion of Merit for his significant contributions to the region and USACE over 2-years.

National Training Center (NTC), Fort Irwin, CA. Engineer Battalion Commander. Responsible for leading 600 Soldiers organized into two Mechanized Sapper Companies, a Military Intelligence Company, A Signal Company, a Maintenance & Logistics Support Company, and the Headquarters Company, all capable of rapidly deploying worldwide and conducting engineer operations in support of the brigade combat team and other maneuver forces. Jeremy was also responsible for the discipline, welfare, and safety of 600 soldiers and their families.

Kenneth Bennett | HSE Safety

Kenneth brings 29 years of health, safety, and environmental leadership experience across major infrastructure and utility projects in the Southeast. He has provided HSE oversight for the Arkansas DOT, Georgia DOT, and Nashville Clean Water programs, ensuring strict compliance with safety standards and best practices. As Area Safety Manager for ARDOT, Kenneth was available to the program 24/7 and helped drive its safety success. For the Baptist Hospital project, he will apply his expertise in risk assessment, hazard mitigation, and contractor compliance to protect workers, the public, and the surrounding community.

RELEVANT PROJECT EXPERIENCE

Arkansas DOT, Little Rock, AR. Safety Manager. Implemented Jacobs' Safety Program for multiple project sites, including the demolition and construction of seven bridges on I-30, performed quarterly site visits and I-Auditor evaluations and conducted required safety training for all Jacobs employees.

Georgia DOT, Atlanta, GA. Safety Manager. Implemented Jacobs' Safety Program for multiple project sites across GDOT Districts 2, 3, and 7. Performed site visits and Audit evaluations. Conducted required safety training for all Jacobs employees.

Clean Water Nashville, Nashville, TN. Safety Manager. Audit safety program implementation at multiple construction sites to include the Nashville Central WTP and construction of 8- and 10-million-gallon tanks to support the surrounding Nashville metropolitan area. Provided safety training as required for Jacobs' site personnel.

Mid-Basin Diversion Program, CPRA, Baton Rouge, LA. Safety Manager. Kenneth reviewed statements of work and task orders to identify the hazard exposure potential to implement required safety measures and protocols. He developed the safety plan and implements the program accordingly. He used the I-Auditor Health, Safety and Environmental program to perform on-site project HSE evaluations to minimize hazard exposure and implement safety measures including COVID-19 pandemic management strategies. He also coordinated and conducted required safety training for all Jacobs CPRA project employees.

Coastwide Reference Monitoring System (CRMS), CPRA, Baton Rouge, LS. Safety Manager. Kenneth coordinated safety planning development and program implementation. He reviewed statements of work and task orders to identify the hazard exposure potential to implement required safety measures and protocols. Using the I-Auditor Health, Safety and Environmental program, he performed on-site project HSE evaluations to minimize hazard exposure and implement safety measures including COVID-19 pandemic management strategies. The I-Auditor program has been vital in facilitating the entire audit workflow. His responsibilities also included coordinating and conducting required safety training for all Jacobs CPRA project employees.

Recovery School District, Louisiana Recovery School District and Orleans Parish School Board (OPSB), New Orleans, LA, Safety Manager. The Jacobs/CSRS joint venture with the OPSB assists with managing a multi-site facilities program that includes school repairs, renovations, new school construction, and temporary educational facilities. Kenneth implemented Jacobs' Safety Program for multiple sites, performs monthly site visits and I-Auditor evaluations, and conducts required safety training for all Jacobs employees.

Project Approach

General

For over four decades, Jacobs has successfully managed and delivered comprehensive oversight for decommissioning and demolition (D&D) projects nationwide, serving both public and private sector clients. We are excited about the opportunity to bring this depth of experience to the City of Pensacola. Our portfolio spans a wide range of project types and scales from single-structure demolitions and partial or full interior gut-outs to large-scale campus closures requiring complex abatement and remediation.

Jacobs approaches each engagement as a true extension of our client's team. For the City of Pensacola, this means prioritizing budget, schedule, and quality while proactively managing risk. Our D&D services encompass every phase of planning and execution, ensuring safe, efficient, and compliant project delivery.

A. Integration with site remediation & hazardous materials
B. Agency approval of work plans/permits
C. Identifying and partnering with qualified D&D contractors
D. Health and safety programs/protocols
E. Contract/Project Administration, Coordination, and Grant Administration
F. Soil removal/site redevelopment & restoration
G. Engagement with stakeholders – regulatory agencies, future property owners, subcontractors, local community members

Our procedures for planning and preparing for total and partial decommissioning and demolition projects are detailed, thorough, and precise, ensuring that each phase of the project is conducted efficiently and safely. For any given project, we perform specific activities in a specific order, ensuring that each one is completed and verified before the next phase commences. As a result, our methods and processes for executing each phase comprehensively supports project implementation at every step.

Decommissioning & Hazardous Materials Mitigation

When facilities or departments have been vacated, a structured decommissioning process is essential before initiating any demolition activities. Jacobs provides comprehensive decommissioning services to ensure all post-vacancy activities are properly coordinated, preparing the site for its final disposition.

Many facilities, such as laboratories, pharmacies, radiology units, patient care areas, and utility plants, may contain hazardous materials or sensitive infrastructure. Utility systems often require safe-off procedures or full disconnection. These steps must comply with state and regulatory guidelines, and Jacobs ensures all actions are thoroughly documented to meet compliance standards.

Jacobs develops detailed decommissioning timelines that align all necessary activities, including the removal of furniture, fixtures, equipment, waste, and any other materials required to transition the facility into a repurposable state. A well-coordinated timeline helps minimize carrying costs, service contract expenses, and other overheads. Additionally, Jacobs can assist in identifying and recovering value through the auction or sale of surplus assets.

Demolition Safety

Jacobs Demolition Safety Key Points:

Working closely with the City of Pensacola, Jacobs will provide Kenneth Bennett, our lead Health, Safety, and Environmental (HSE) professional, to oversee safety on the project and coordinate with contractors and consultants already engaged. Safety is paramount in this type of work—both in safely isolating utilities to protect workers and neighbors, and in implementing the chosen demolition method to bring down multi-story structures in a controlled, secure manner. Kenneth's leadership will ensure that all activities are carried out with the highest standards of risk management and compliance, safeguarding the workforce and surrounding community throughout the project.

A Secure and Safe Site

- **Site Fencing** is required for access to the Main Hospital Building, and the Medical Towers. A trailer compound in the North Parking Lot may be fenced and should be utilized for staging equipment and temporary storage of approved waste. Public access will be restricted, with public safety as the top priority.
- **A Unified Safety Plan -** Jacobs will develop and publish the Site Safety Plan with the strategic input and coordination from the Remediation and Demolition plan.
- **Safety Orientation -** All demolition and construction personnel assigned to the project will receive a comprehensive safety orientation.
- **Public Communication -** Effective communication with the citizens of Pensacola will be essential, particularly if demolition involves one or more building implosions. Clear messaging regarding noise, vibration, dust, and safe-zone requirements will be a critical component of our Safety Program to ensure public awareness and protection.
- **Interface with Pensacola Fire, Police, HSE and Administration** – Jacobs will develop and publish the Communication plan for the City and for alignment with City reporting and requirements.

Project Management / Administration

Contracts, Budget, Cost Management, Conflict Resolution, Communication, & Grants)

Our roadmap and best practices begin at project start as we develop a Project Management Plan (PMP) which outlines how our team will follow best practices, as well as incorporate lessons learned from our previous experience in the industry to efficiently deliver your project.

Our PMP is tailored to meet and maintain the Project's needs and requirements. This manual sets each of the policies and procedures established for your project, and identifies each team member's role, responsibilities, and deliverable requirements. The PMP outlines our approach to each facet of project management: managing user input, tracking issues, and integrating a document control system that is coordinated with your process.

All Components of the Project Management plan are housed in Jacobs Project Management Plan (PMP). This establishment of our baseline communication plan, budget/cost review process, scheduling, conflict resolution amongst all the other factors that drive a successful project are kept in the Project Management Plan (PMP). As updates occur, this is a live document that updates with the project and processes. That way all stakeholders know the steps in the project, no matter what topic. From Submittals, RFIs, pay applications, change orders, inventory/sales logs, it all becomes a part of the PMP plan for the team to monitor progression and ensure no deviations occur from our baseline, which is how we proactively manage for you.

Collaborative Innovation & Decision Making

As part of the process to deliver a successful project to the City of Pensacola, **Jacobs proposes using the key principles of an Integrated Project Delivery (IPD) method to create an atmosphere of understanding, coordination, and collaboration between key stakeholders.** The first thing demolished on the project will be the barriers to open communication and innovation. The local team will cultivate an environment where stakeholders feel comfortable communicating openly and freely. Encouraging participation and feedback with the goal of building trust, cultivating buy in, and thus motivating the entire team to be "all in."

We will clearly define the roles and responsibilities of each team member while simultaneously empowering the team to share their respective expertise for the betterment of the project. As the Owner's Representative and demolition manager, Jacobs will manage tasks as identified below:

- Manage and coordinate with utility companies
- Engage with the public as needed to make sure the relationship of the area is a positive one
- Be responsible to managing activities performed by the demolition contractor
- Act as the owner's liaison for on-site activities
- Communicate activities, progress, schedule, obstacles, and mitigations with owner and demolition contractor
- Verify invoicing by the demolition contractor to the owner
- Define abatement and demolition goals and vision
- Participate in meetings with stakeholders and seek balance between competing interests
- Determine site and existing building constraints and opportunities
- Develop alternative concepts together with site and basic systems/materials
- Conflict resolution
- Any OR scope components required to successfully manage the project and all stakeholders

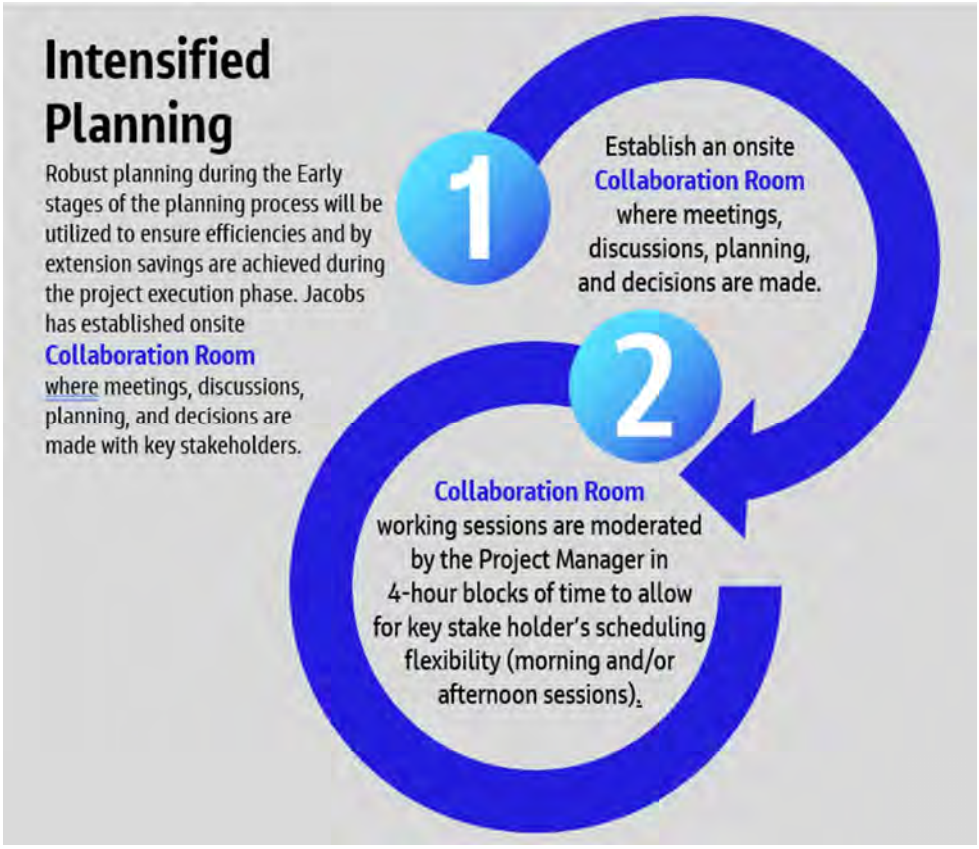
Early Involvement of Key Participants

Immediately after notification of award, Jacobs will convene/host a meeting of key stakeholders to align the team with project goals, constraints and identify opportunities to streamline decision making. At this meeting, we will establish meeting protocols and workshops for establishment of:

1. Schedule control – weekly or more often as needed, schedule updates and three-week forecast.
2. Project status – weekly progress, safety issues and incidents, community issues, change management.
3. Document and Communications – weekly updates on RFI's, submittals, daily reports. Utilize available/preferred technology to facilitate the communication of ideas, graphic depictions of strategies and documentation of progress to facilitate successfully reaching the team's shared goal(s).
4. Workshop to develop schedule for presentations to local authorities and community. Establish working hours, noise restrictions, dust prevention, truck traffic routes, and parking areas.
5. Workshop/meetings with existing/adjacent tenants, (is the entirety of the buildings vacated?). Efforts can be made to negotiate arrangements that could allow some access to unoccupied buildings/portions of the demolition project, until the area is a part of schedule demolition. A workshop will determine areas of opportunity for an early start and restrictions on that work.
6. Workshops/meetings with local fire, emergency services, law enforcement. Site is near residential communities, a high school, and numerous businesses. Traffic control will be a major topic, and the Decommissioning and Demolition Contractor (DDC) will need to present their traffic control plan.
7. Workshop/meetings to ensure regulatory requirements are understood and DDC methodology for abatement and demolition will comply.
8. Health and Safety workshop; initiate morning safety meetings, total engagement of all workers, and safety possible incentive program.
9. Environmental Site Assessments & Mitigation plan and review for execution in the field.
10. Concurrence on overall schedule and milestones.

Phasing Sessions, Pre-Demolition

1. Permitting: Collaborate with selected Contractor to identify information, timelines, and material required for submissions to the Authorities Having Jurisdiction, set milestones for permits. Update status, weekly.
2. Establish site entrances, exits, laydown area, temporary facilities. Considerations on road closures, as fire and emergency services will need access to residential areas.
3. Preconstruction survey of adjacent structures and facilities. This includes video survey of sidewalks, roadways, storefronts, residential structures, etc. to establish conditions prior to demolition.
4. Installation of fencing, stormwater controls, utility locate, and noise and air monitoring stations.
5. Plan for cost effective waste minimization including salvage, reuse and recycle of materials.
6. Determination of available fire-water services. Installation of new hydrants if necessary.
7. **Demolition Delivery:** Assess means and methods for demolition including impacts beyond project site, other alternatives and factors that may impact tenants and adjacent structures, and how best to minimize impacts of the demolition and removal of materials. Potential means and methods may include surgical top-down demolition (recommended), felling, and implosion.
8. Review and confirm environmental regulator information on asbestos containing materials, lead based paint, and universal wastes.
9. Abatement of environmentally regulated materials.
10. Utility Isolation sequenced to maintain existing occupant infrastructure and maintaining emergency services.
11. Staging of equipment and demolition materials for segregation, sizing, and loadout.
12. Establishing the "Means and Methods" of how to execute the "de-construction" of the campus. This includes submitting demolition concept plans to Trinity for approval within the first three weeks of project kickoff.



Support during Construction

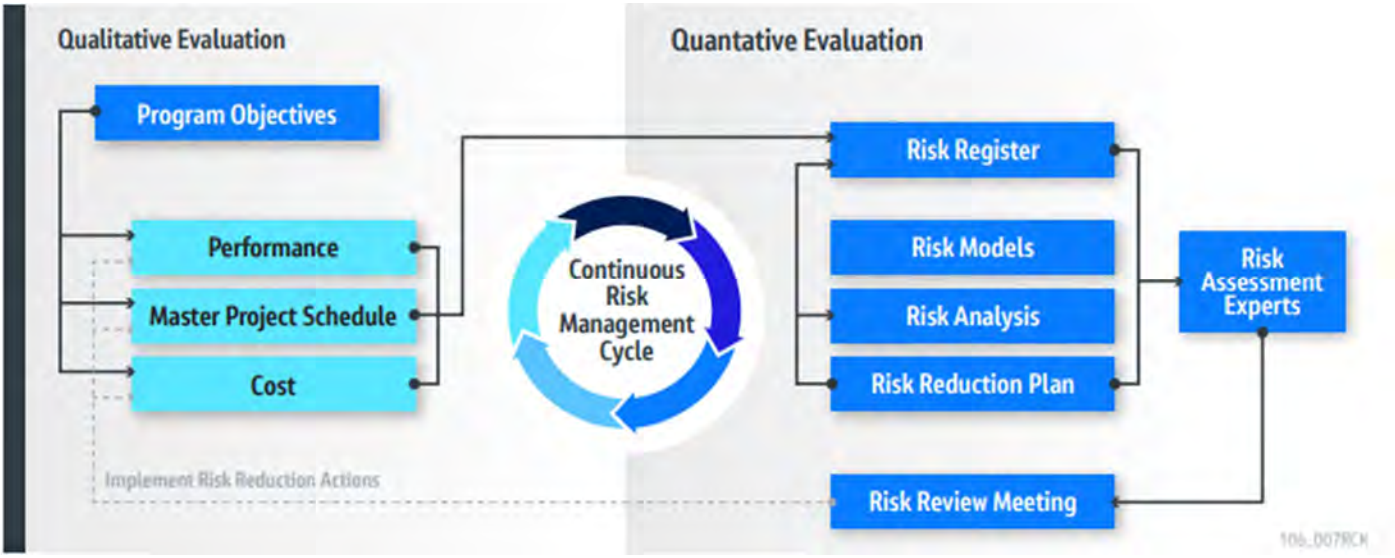
Jacobs anticipates the following sequence of work after mobilization;

1. Decommissioning to be verified and monitored by Jacobs teams.
2. Assessment of any required decontamination, regulated waste, and medical waste removal. Observe and monitor decontamination and abatement activities.
3. (Value Plus) Jacobs has the in-house capabilities to perform structural assessment of the buildings to confirm demolition plan.
4. Initial kick-off meeting with involved stakeholders, with a follow up meeting to discuss issues/ concerns of others. Adjust plan as needed.
5. Safety and site orientation meeting with field personnel (supervision, craft, inspection) prior to work. Ensure workers understand the "Stop work" authority/responsibility. Safety meeting occurrence establishment.
6. DDC initiates work. Jacobs team monitors work for compliance with contract and performs daily reporting, including work and safety observations, air monitoring, waste tracking and progress reports.
7. Jacobs coordinates inspections by regulatory agencies, provides weekly updates to the City of Pensacola, updates status with local fire and emergency services. OR will also monitor and recommend adjustments to traffic control, parking, and dust control.
8. Project completion – DDC and Jacobs will perform walk through for development of punch list for substantial completion; ensure site is safe and stormwater controls are in place; final sign-off from regulatory agencies. Jacobs will provide a final report to the City of Pensacola.

Risk Mitigation & Lessons Learned

Developing an acceptable Risk Management Plan is essential in understanding the overall project and the exposure that exists; from safety to logistical challenges, to budget and schedule risks. We bring this capability and expertise to establish a Risk Management Plan. Our basic risk approach includes developing a contingency plan in parallel to manage unforeseen situations. At the start of the project, we populate a register with risks identified, by our team and by other project stakeholders. This information is then shared with the team to keep them informed of upcoming risks on the project. The register is updated regularly to close risk items and to identify and analyze risks still open that could influence the project.

The objective of risk assessment is to prepare for risk mitigation, while concurrently allowing for these issues in our project budget and schedule. Risk mitigation includes a reduction in the exposure to a risk event. The diagram below illustrates how our risk management cycle tracks potential issues from their initiation to full resolution, thus minimizing project impacts.



Risk analysis and evaluation is a process that continues throughout the life cycle of the project. Applying our company's history and lessons learned to know where risk is and how to resolve in a streamlined process is key to a successful project.

Table 1: As an example, we have presented some topics for consideration as well as mitigating factors for each:

Issues / Challenges	Risk	Mitigation
Disruptions to Site Operations	▪ Increase in material and personnel traffic within the facility impacts ongoing operations	▪ Coordination among various site activities ▪ Communication with community and businesses
Personnel, Materials, and Equipment Movement	▪ Construction personnel, materials, equipment moving through buildings may disrupt areas	▪ Communication and Coordination stakeholders involved
Overall disruption to surrounding community and businesses	▪ Truck traffic from nearby highways to site impacts normal activities, resulting in complaints from the community	▪ Robust Traffic Control Plan (TCP) ▪ Establish communication plan w/ community ▪ Truck driver training for the TCP
Dust, noise, vibration	▪ Dust, noise, vibration may be disruptive and/or contaminate adjacent buildings and local community, or any consideration beyond the project site	▪ Initial documentation of adjacent areas, for monitoring during construction efforts ▪ Efficient and effective monitoring program at the perimeter of the site and adjacent to potential receptors (on and off-site)
Overhead Lifts	▪ Damage to Building and/or equipment if there is a rigging or crane failure ▪ Personnel injury	▪ Equipment inspection/maintenance program ▪ Secure exclusion zones for equipment/ cranes
Impact to other Areas during Demolition	▪ Interruption of utilities: electrical, fire protection, HVAC, alarm systems, right-of-way spaces	▪ Detailed utility locators ▪ Knowledge in systems and shutdown/ isolation locations
Access to Work Areas	▪ A slip in schedule to allow access to work areas impacts budgets, labor sourcing, schedule	▪ Advanced planning, coordination, and communications
Delivering the project on budget	▪ Control and maintain project costs within funding guidelines	▪ Effective change management ▪ Weekly schedule/budget reviews ▪ Budget recovery plans
Quality	▪ Late discovery of sub-standard installation or documentation effecting project delivery	▪ Preparation/implementation of Construction Quality Management Plan (CQMP) ▪ On-site inspections/verification of compliance with CQMP
Delivering project schedule	▪ Delayed project and turnaround completion	▪ Weekly schedule reviews ▪ Schedule recovery plan

Lessons Learned and Best Practices Jacobs will Implement for Successful Delivery of the Baptist Hospital Decommissioning and Demolition Project

- **Right Team, Right Start** – Prequalify and secure highly skilled partners, especially in asbestos abatement and demolition/implosion, to ensure safe, cost-effective execution.
- **Community and Local Involvement** – Actively engage local DBE/WBE and community firms for security, fencing, trucking, signage, and support services, fostering goodwill and economic benefit.
- **Clear Communication** – Maintain constant coordination with contractors, City staff, and the public to build trust and avoid surprises.
- **Public and Worker Safety First** – Prioritize secure perimeters, evacuation zones, and redundant safety measures to protect both site workers and surrounding neighborhoods.
- **Proactive Risk Management** – Identify potential risks early (structural, environmental, logistical) and assign clear mitigation responsibilities.
- **Dust and Environmental Control** – Implement dust suppression and monitoring plans to protect public health and minimize community disruption during demolition.

Experience with Mitigation of Hazardous Materials

The Jacobs Team brings extensive experience in the mitigation and remediation of hazardous materials on complex decommissioning and demolition projects. Michael McIntyre, our Healthcare Demolition Lead, co-authored Abatement and Remediation in Public Buildings as part of his graduate research at the University of South Florida, underscoring his technical expertise in this area. Leveraging environmental surveys, maintenance records, and site inspections, Jacobs will thoroughly assess the extent of hazardous materials present at the former Baptist Hospital Complex.

Our Jacobs team is uniquely qualified, with tremendous reach back staffing resources, provided by our health and safety professionals, engineers, commissioning and de-commissioning staff to identify and reduce risk to the City of Pensacola.

Given the facility's age, history, and changing codes, unique hazardous material risks are anticipated. Our team's proven approach to healthcare facility decommissioning ensures these risks are identified early and managed effectively. Potential areas of concern include medical and radiological materials, hydrocarbons, diesel fuels, refrigerants, PCBs, asbestos-containing materials (such as fireproofing, vinyl asbestos tile, roofing, insulation, and soundproofing), and lead-based products. Jacobs' systematic risk mitigation process will safeguard workers, the public, and the environment while supporting a safe and compliant project outcome for the City of Pensacola.

Jacobs Mitigation Practices will include:

Detailed Scope Development & Reviews	Each type of HazMat and a plan of action.
Jacobs Team Experience	With HazMat Risk Remediation as a National Owner Representative Firm with a Pensacola office.
Development & Review	Contract language for the CMAR/Demo and Remediation Contractor(s) to enforce project requirements for HazMat and Risk Management.
Documentation Requirements	Federal, State and Local permitting, reviews and approvals.
Public Safety	Big issue! Ensuring the site is secure, protected, and most importantly, empty prior to demolition.
Testing, Site Observations, and Reporting	Such as containment of ACM's, lead, etc., along with disposal records and chain of command for radiologic materials.
Bulk Management & Disposal	No commingling of HazMat with Bulk demo! The Hospital Building alone could generate over 19,000 Cubic Yards of bulk waste, and we require the contractor handle the HazMat materials properly.
Testing Reports & Specialty Observations	During our project startup phase, we will identity any owner requirements for air, water, soil and HazMat testing during the process of demolition.

Our Jacobs team is uniquely qualified, has tremendous reach back staffing resources, provided by our health and safety professionals (HSE), engineers, commissioning and de-commissioning agents, engineers and project staff to identify and reduce risk to the City of Pensacola.

Knowledge of the Site and Local Conditions

Escambia County vulnerability assessment stakeholder meeting.

Jacobs possesses an understanding of the site and its surrounding community, having completed multiple projects within the region. This experience has allowed us to develop a strong familiarity with the area's environmental conditions, infrastructure, and community expectations from an Authority Having Jurisdiction (AHJ) perspective to the local resident. We plan to actively engage with local stakeholders, such as Lakeview Center, to ensure our work aligns with adjacent community values and long-term development goals for you, the client. Jacobs is familiar with managing community workshops to receive input from stakeholders; we understand the relationship for the Pensacola community because we live here. For the technical services, FPL, ECUA, Pensacola Energy, Cox, and the likes, have worked with our teams here locally, so we have a good rapport with all entities as we want to continue partnerships there as well.

We are well-versed in the local codes, ordinances, and permitting requirements specific to the jurisdiction, including zoning regulations, environmental compliance standards, and building codes. Our project managers and code Subject Matter Experts (SMEs) enable us to navigate the permitting process efficiently and proactively to address any regulatory challenges. This expertise ensures that our projects remain compliant from inception through completion, minimizing delays and fostering trust with oversight agencies.

While management of the subcontractors will be directly managed by the DDC, our firm has cultivated long-standing partnerships with a network of subcontractors who share our commitment to quality and timeliness. These relationships are built on mutual respect, clear communication, and a shared understanding of project expectations. By leveraging these connections and our proven oversight capabilities, we consistently deliver projects that meet or exceed client expectations while adhering to all regulatory requirements.

Scheduling, Cost, and Quality Control

Schedule Management

Jacobs is familiar with any scheduling system and can work with any industry-standard project management platforms such as Primavera P6, allowing for precise tracking of milestones, resource allocation, and dependencies. Jacobs' in-house schedule specialists develop project specific as well as program level master schedules for our clients. A detailed schedule is integral to timely completion of decommissioning and demolition projects. Utilizing the information gleaned during the project kick off sessions, our scheduler will develop a master schedule tailored to the City of Pensacola's specific delivery process. This comprehensive master schedule will include all activities that affect decision making such as:

- Board level and jurisdictional approvals
- Various decision-making milestones
- Logistics planning
- Community communications
- Decommissioning
- Permitting
- Hazardous material assessments
- Hazardous material abatements
- Demolition and debris
- Removal of equipment for reuse or salvage
- Closeout

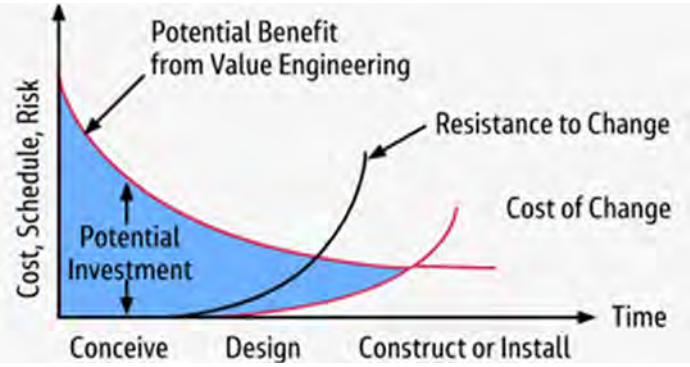
A detailed schedule is integral to timely completion of decommissioning and demolition projects.

Our scheduling approach emphasizes proactive coordination with all stakeholders, ensuring that potential delays are identified early and mitigated through contingency planning and adaptive resource management. In conjunction with the City of Pensacola key stakeholders, we will review the baseline program master schedule so that stakeholders are aware of how timely decisions affect the delivery of the project. The feedback from stakeholders must align and support the sequence of the project activities to achieve the goal of on-time delivery. Our project manager will keep the stakeholders focused on that goal to establish schedule compliance.

Our proposed approach is centered around establishing work plans and managing touchpoints between various team members. A healthy, symbiotic relationship between the client, demolition contractor, and even major trade contractors is key to success and requires detailed planning. We also offer constructive input on sequencing and phasing strategies to facilitate productivity and completion objectives. Jacobs will guide the team through a process that will ensure that the project budget and schedule are maintained.

Cost Management

It is critical to the start of any program that the budget be established and validated. We understand that the program budget has been defined, and the demolition contractor has been identified. We expect there may be a level of Board approval for the total program budget, so the rapid preparation of a complete budget/estimate including decommissioning, abatement, demolition, and supporting professional services is critical. Jacobs has developed a comprehensive database of project costs that allows us to quickly validate each component of the budget. Jacobs will prepare accurate estimates which are crucial to making sound decisions and maintaining cost control.



As part of our decommissioning and demolition phase services, Jacobs provides detailed oversight—a role that encompasses management of the established project schedule, site logistics plan, decommissioning and demolition phasing, and coordinating the team members associated with the project. We monitor work progress, perform contract and administration reviews, manage and mitigate the change process, and expedite issue resolution. Jacobs will manage the responsibility of all funding support and review requirements throughout the project.

Safety & Quality Management

Safety and Quality control is embedded throughout our project lifecycle, beginning with detailed planning and continuing through execution and closeout. We will initiate the Quality Assurance (QA) process during the assembly, review, and evaluation of the scoping documents, which will eventually support the effort to identify gaps or conflicts in performance criteria. We will work with the project decommissioning team to achieve the most optimal outcome. Similarly, during demolition, having boots on the ground working with and watching over the process provides for an additional opportunity to identify any risks to successful completion of your work.

During demolition, having boots on the ground working with and watching over the process provides for an additional opportunity to identify any risks to successful completion of your work.

Jacobs will establish a Project Health, Safety & Environment Plan (PHSEP) for the project which outlines project hazards, restricted areas, necessary on the job trainings, permitting, communications for safety incidents, environmental protections, and emergency preparedness. Our team fosters a culture of continuous improvement, leveraging lessons learned and client feedback to refine our processes. By integrating scheduling, cost control, quality, and safety assurance into a unified management strategy, we consistently deliver projects that meet or exceed expectations in a timely and cost-effective manner.

Benefits

Jacobs' project management tools demonstrate a robust and integrated approach to delivering successful outcomes. By combining advanced scheduling capabilities, precise cost control mechanisms, and rigorous quality assurance processes, Jacobs ensures that every project is executed efficiently, within budget, and to the highest standards. This comprehensive framework not only drives performance but also builds trust and long-term value for clients across the nation.

Certification as or Partnership with an MBE/SBE/WBE

As a relationship-based company, we rely on our teaming partners to help support our clients' needs, and we understand the value they bring to our business. We are committed to supplier diversity in our teaming and subcontracting opportunities. We review each opportunity and seek teaming partners that meet our clients' project needs and diversity goals with small, diverse businesses that will provide exceptional value to our clients, our projects, and the communities we serve. To build meaningful partnerships, we diligently work to build a supply chain that demographically mirrors or represents that of our clients' customer bases as part of a strategic effort to demonstrate a positive socioeconomic impact on the regions and communities where they conduct business.

It is our policy to maintain a strong, competitive supplier base that reflects diversity and inclusion. At Jacobs, we know that if we are inclusive, we're more connected, and if we are diverse, we're more creative enhancing our ability to provide clients with more imaginative and effective solutions. **We will look for opportunities on this contract and work with the Contractor to include Small, Disadvantaged, Minority-Owned, Women-Owned, and Veteran-Owned Small Businesses.**

At Jacobs, it is our policy to maintain a strong, competitive supplier base that reflects diversity and inclusion. We know that if we are inclusive, we're more connected and more creative, which in turn

provides our clients with more imaginative and effective solutions!

Jacobs

Challenging today.
Reinventing tomorrow.

Scope of Work for Qualifications #25-039

The CONSULTANT, acting as the Owner's Representative, shall perform the following project management services for the decommissioning and demolition of THE FORMER BAPTIST HOSPITAL COMPLEX Project in Pensacola, FL ("Project") under the direction and supervision of the Owner ("City of Pensacola" or "City").

Task 1.0 – Project Management

Task 1.1 – Project Setup / Oversight

Task 1.2 – General PM Tasks

A) The Consultant shall develop and document a Project Management Plan including a project delivery approach.

Task 2.0 – Services During Construction

Task 2.1 – Project Management

Task 2.2 – Public Interface / Communication

Task 2.4 – Project Support

Task 2.5 – Photography

Task 2.6 - Expenses

Contract Administration

B) Monitoring the City's contactor's compliance with contractual requirements for schedules, reports, submittals and other requirements
C) Review contractor submittals for compliance
D) Review of percent complete and quantities claimed on monthly invoices
E) Support on change order mitigation and resolution
F) Participating as City's representative on daily and weekly site meetings
G) Preparation of daily reports
H) Providing daily summaries of work performed, load counts, and capturing copies
of each waste manifest or bills of lading for scrap metal. Monitoring that waste is being shipped to proper facilities.
I) Review of close out reports and waste documentation
J) Participate in and coordinate biweekly progress meetings with City representatives to review work performed, discuss upcoming activities and confirm project scheduling.
K) On a monthly basis, or as set forth below, the Consultant shall prepare a Project Report. The Project Report will include a summary update of Project status, an updated Project Schedule, actual and anticipated costs related to the Project,

proposed and approved change orders, and any claims pertaining to the contractor, Owner, and the Owner's other consultants and contractors.

L) The CONSULTANT shall review a comprehensive Project Umbrella Schedule showing priorities, sequences, durations, and responsible parties for major design, pricing, construction and Owner activities; establishing the overall duration of the Project; and identifying critical milestone dates. The CONSULTANT shall update and expand the level of detail and status of the Project Schedule as the Project progresses. The Project Schedule shall also incorporate or identify

i) dates for approvals and permits;

ii) project specific milestones and design and construction schedules, including dates of commencement and completion;

K) The Consultant shall advise the Owner of observations it makes regarding deficiencies in the performance of the Owner's consultants and contractors.

<u>Demolition</u>

A) Help evaluate refrigerants from HVAC or other equipment are captured properly

B) Monitor efforts of City's contractor that pipes are drained properly, utility lines are disconnected and liquid including fire suppressants, boiler water, aviation fuel is captured and not released to the environment.

C) Provide oversight that asbestos containing material from the Project site is segregated, bagged,

labeled and shipped by a third party to an approved disposal facility.

D) Monitor that specialized wastes, such as hazardous wastes or universal wastes from the Project site are managed and disposed of in accordance with applicable regulations.

E) Review Stormwater protection equipment is installed, monitored, and maintained.

F) Monitor that trees are being protected.

G) Monitor that nothing is being tracked offsite

H) Monitor that waste is not diverted to any unapproved locations or uses.

<u>Construction Phase</u>

A) Oversee mobilization of Owner's construction contractor Monitor construction progress and Contractor's quality control and assurance process Monitor compliance with contract documents

B) CONSULTANT will act as the liaison for citizen meetings, inquiries, and complaints for this construction project.

C) CONSULTANT will provide photography documentation and expenses for project support

Project Closeout Services

A) Oversee construction contract closeout
B) Administrate project punch-list
C) Negotiate final change orders
D) Make recommendations on final payments and collect all waivers and certificates
F) Monitor warranty administration
G) Coordinate submission of As-Built drawings
H) Coordinate and review turnover documents required by project requirements for sustainability goals

Task 2.3 – Safety Review

Safety at the Project site

A) Consultant will notify Owner of safety hazards it identifies at the Project site, including reviewing that proper PPE and safe demolition techniques are being utilized
B) Monitor that fire code requirements are being maintained and fire hydrants around site
C) Participates in safety walks, safety inspections, and safety meetings
D) Assist in securing the Project site
E) Monitoring that stockpiles are covered and dust is controlled
F) Review noise monitoring is being carried out
G) Helps proactively observe and resolve local community issues are managed (loose trash, blowing dust, worker parking)
H) Monitor that existing monitoring wells are protected.
I) Monitoring that truck drivers are utilizing approved routes and that trucks and drivers have required licenses.

Assumptions:

- In providing opinions of cost, financial analyses, economic feasibility projections, for the project, CONSULTANT has no control over cost or price of labor and materials; unknown or latent conditions of existing equipment or structures that may affect operation or maintenance costs; competitive

bidding procedures and market conditions; time or quality of performance by operating personnel or third parties; and other economic and operational factors that may materially affect the ultimate project cost or schedule. Therefore, CONSULTANT makes no warranty that City's actual project costs, financial aspects, economic feasibility, will not vary from CONSULTANT's opinions, analyses, projections, or estimates and CONSULTANT shall have no liability for such variances.

- The presence or duties of CONSULTANT's personnel at a construction site, whether as onsite representatives or otherwise, do not make CONSULTANT or CONSULTANT's personnel in any way responsible for those duties that belong to City and/or the construction contractor or other entities, and do not relieve the construction contractor or any other entity of their obligations, duties, and responsibilities, including, but not limited to, all construction methods, means, techniques, sequences, and procedures necessary for coordinating and completing all portions of the construction work in accordance with the construction Contract Documents and any health or safety precautions required by such construction work.

  CONSULTANT and CONSULTANT's personnel have no authority to exercise any control over any construction contractor or other entity or their employees in connection with their work or any health or safety precautions and have no duty for inspecting, noting, observing, correcting, or reporting on health or safety deficiencies of the construction contractor(s) or other entity or any other persons at the site except CONSULTANT's own personnel.

  The presence of CONSULTANT's personnel at a construction site is for the purpose of providing to City a greater degree of confidence that the completed construction work will conform generally to the construction documents and that the integrity of the design concept as reflected in the construction documents has been implemented and preserved by the construction contractor(s). CONSULTANT neither guarantees the performance of the construction contractor(s) nor assumes responsibility for construction contractor's failure to perform work in accordance with the construction documents.

CONSULTANT shall assume no liability or responsibility for any conditions that exist on the project site including, but not limited to, any hazardous materials, environmental

conditions, attractive nuisances, facilities, equipment or other unknown or unforeseen conditions.

V. GENERAL TERMS AND CONDITIONS

B. Insurance and Indemnification

Before starting and until termination of work for, or on behalf of, the CITY, the CONSULTANT and any/all sub consultants shall procure and maintain insurance of the types and to the limits specified by this agreement.

The term CITY as used in this section of the Contract is defined to mean the CITY of Pensacola itself, any subsidiaries or affiliates, elected and appointed officials, employees.

Insurance shall be issued by an insurer only rated by A- VII by A.M Best. Unless otherwise agreed, the amounts, form and type of insurance shall conform to the following minimum requirements,

The coverage shall be written on occurrence-type basis. Minimum limits of $1,000,000 per occurrence and in the general aggregate must be provided. The City of Pensacola must be listed as an additional insured.

Business Auto Policy coverage must be provided, including bodily injury and property damage arising out of operation, maintenance or use of owned, non-owned and hired automobiles. Minimum limits of $1,000,000 CSL must be provided.

Professional Liability insurance coverage must be provided to afford protection for errors and omissions arising out of services provided under, or associated with this contract. Minimum limits of $5,000,000 per claim and $5,000,000 annual aggregate must be provided.

CERTIFICATES OF INSURANCE

Required insurance shall be documented in the Certificates of Insurance that lists this Contract and provides that the CITY shall be notified at least thirty (30) days, except ten (10) days for non-payment of premium in advance of cancellation, nonrenewal or adverse change or restriction in coverage. If required by the CITY, the CONSULTANT shall furnish copies of the CONSULTANT's insurance polices, forms, endorsements, jackets and other items forming a part of, or relating to such policies.

INSURANCE OF THE CONSULTANT PRIMARY

Except for Professional Liability and Workers' Compensation insurance, the CONSULTANT's required coverage shall be considered primary, and all other insurance shall be considered as excess, over and above the CONSULTANT's

coverage. The CONSULTANT's policies of coverage, except Professional Liability and Workers' Compensation will be considered primary as relates to all provisions of the Contract

HOLD HARMLESS

The Consultant shall indemnify and hold harmless the City of Pensacola, its officers and employees, from any and all liabilities, damages, losses, and costs to the extent caused by the negligence, recklessness or intentional wrongful misconduct of the Consultant and persons employed or utilized by the Consultant in the performance of the contracted services. The Consultant's obligation shall not be limited by, or in any way to, any insurance coverage or by any provision in or exclusion or omission from any policy of insurance.
